QUALIFICATIONS OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART I

1 Q. Please state your name, address, and current position.

2 A. My name is David W. Isakson (he/him/his). My business address is 7109 West
3 Saginaw Hwy, Lansing, Michigan 48917. I am currently employed by the
4 Michigan Public Service Commission (MPSC or Commission) in the Rates and
5 Tariff Section of the Regulated Energy Division as a Departmental Analyst.

6 Q. Would you briefly describe your educational background?

7 A. I earned a B.S. in economics from Central Michigan University in 2008. In 2011,
8 I completed an M.A. in economics at Central Michigan University.

9 Q. Have you attended any seminars or other training courses?

10 A. Yes. In August 2012, I completed the National Association of Regulatory Utility
11 Commissioners (NARUC) Annual Regulatory Studies Program held at Michigan
12 State University. I attended the AEIC Advanced Load Research Seminar in
13 October 2012, and the Electric Cost of Service Study and Electric Utility Pricing
14 courses hosted by EUCI in July 2019.

15 Q. What are your responsibilities in your current position?

16 A. I participate in rate, tariff amendment, reconciliation, integrated resource plan
17 (IRP), special contract, *ex parte* tariff, and other cases under the supervision of the
18 Rates and Tariff manager. My work involves performing electric rate design, gas
19 rate design, and tariff analysis. My duties also involve performing research in
20 special topics such as rate benchmarking, load research, demand response, and the
21 economics of public utility regulation.

22 Q. Have you previously presented testimony in cases before the MPSC?

23 A. Yes, I have presented testimony in the following cases:

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 Q. What is the purpose of your testimony?

2 A. The purpose of my testimony is to present MPSC Staff's (Staff's) present
3 revenue, electric rate design, and Staff's positions on various rates, credits, and
4 tariff provisions.

5 Q. Are you sponsoring any exhibits?

6 A. Yes, I am sponsoring the following exhibits:

7 Staff Exhibit S-6, Schedule F-2.0, "Staff Summary of Present and Proposed
8 Revenues by Rate Schedule."

9 Staff Exhibit S-6, Schedule F-2.1, "Staff Calculation of Rate Design Targets."

10 Staff Exhibit S-6, Schedule F-3.0, "Staff Present and Proposed Revenue Detail."

11 Staff Exhibit S-6, Schedule F-4.0, "Staff Comparison of Present and Proposed
12 Monthly Bills."

13 Staff Exhibit S-6, Schedule F-5.0, "Staff Demand Response (DR) Surcharge."

14 Staff Exhibit S-6, Schedule F-6.0, "Staff Electric Rate Case (ERC) Surcharge."

15 Staff Exhibit S-6, Schedule F-7.0, "Staff Investment Recovery Mechanism (IRM)
16 Surcharge."

17

18 **Present Revenue**

19 Q. What does Staff recommend for present revenue?

20 A. Staff recommends a present revenue of \$4,685,350,000 versus the Company's
21 \$4,639,227,000. A higher present revenue has the effect of lowering the revenue
22 deficiency. Detail of Staff's present and proposed revenues can be found on Staff
23 Exhibit S-6, Schedule F2.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 Q. What adjustments did you make to the Company's filed present revenue?

2 A. I made three adjustments to present revenue: correct an error in the Company's
3 rate design model, incorporate Staff's residential credits projection, and reflect
4 Staff's sales and customer count forecast. These adjustments increase present
5 revenue, and therefore reduce the revenue deficiency, by a total of \$46,123,237.

6 As discussed later in my direct testimony Staff's sales forecast also requires an
7 increase in power supply cost recovery (PSCR) expense, which reduces the total
8 impact of the present revenue adjustment.

9 Q. What error did Staff find in the Company's rate design model and how does its
10 correction affect present revenue?

11 A. The rate design for Rate RSM, the residential non-transmitting meter rate, applies
12 the incorrect customer counts for the Residential Senior Citizen Credit (RSC) and
13 the Residential Income Assistance Credit (RIA). Practically speaking, the Excel
14 model points to the wrong input cells and has the effect of switching the customer
15 counts between the two credits. Correcting the error results in an increase of
16 \$132,947 in present revenue.

17 Q. How does Staff's projection of residential credits differ from the Company and
18 what is the impact of Staff's projection on present revenue?

19 A. The Company projects 350,683 customers will receive the RSC per month and
20 66,555 customers will receive the RIA per month. The Company's RSC
21 projection is based on regression modelling and the RIA projection is based on a
22 two-year monthly average from January 2022 to December 2023.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

Staff projects a monthly RSC customer count of 332,344 and a monthly RIA customer count of 61,816. Fewer customers receiving bill credits results in increased present revenue and therefore decreases the revenue deficiency. Staff's projections are the simple 3-year averages of customer counts for those credits from 2021-2023.

The Company did not propose to alter the currently approved credit amounts for the RSC (\$4 per month) or the RIA (\$8 per month). To arrive at the present revenue impact of Staff's projection, I multiply the annual difference in customer count by the appropriate credit amount. This results in a total increase of \$1,335,198 to present revenue.

Q. Why is Staff's residential credit projection reasonable?

A. First, Staff's method of using the historic 3-year average of customer count has been approved by the Commission in the Company's recent rate case as well as for other Michigan utilities.¹ Second, Staff's continued reliance on 3-year averages means that any trends in customers receiving credits will necessarily be incorporated into future rates. Those trends may lag being included in base rates by a year or more, but will eventually be reflected accurately in rates. This is important because without a tracking mechanism any over or under-projection of RIA or RSC customer counts would be absorbed by the Company. This means that the Company, or any utility, has a distinct incentive to over-project. If fewer customers receive bill credits than projected, then the Company keeps the

¹ March 1, 2024 Order in MPSC Case No. U-21389, p 147-148. December 1, 2023 Order in MPSC Case No. U-21297, p 188.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 difference. Staff's method has the added effect of smoothing out variation in
2 residential credit customer count, so that if there is a dramatic change during any
3 one historic year then it will not impact the projection as greatly.

4 Q. What did Staff and the Company project for customers receiving the Low-Income
5 Assistance Credit?

6 A. The Low-Income Assistance Credit (LIAC) is limited so only up to 4,200
7 monthly customers may receive the credit. Both Staff and the Company assume
8 that all available LIAC credits will be received by customers during the test year.
9 The tariff provision for the LIAC also states that any shortfall in dispensing
10 annual LIAC funds will carry over into the next year. Neither the RSC nor the
11 RIA are capped, so actual customer counts for those two credits may end up
12 higher or lower than projections during the test year. Projecting a lower number of
13 customers receiving the RSC or RIA credits for rate-making purposes does not
14 preclude customers from applying for and receiving those credits should they be
15 eligible.

16 Q. Please describe the impact on present revenue of Staff's sales and customer count
17 forecast.

18 A. Staff witness Paul R. Ausum sponsors Staff's forecast which differs from the
19 Company's in several ways. Staff's forecast results in higher energy sales for the
20 residential class and a higher customer count for the commercial class. Staff's
21 increased customer count for commercial customers has the effect of increasing
22 sales for that class as well. All told, incorporating Staff's sales and customer
23 count forecast, not including the change to residential credits or the rate design

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 error correction, results in an increase in present revenue of \$44,656,092. This
2 amount includes increased energy sales revenue, increased customer charge
3 revenue, and increased PSCR revenue. The PSCR revenue portion of the
4 adjustment is \$16,375,207, which necessitates an equivalent increase in PSCR
5 expense. The increased expense has the effect of offsetting the revenue
6 deficiency, so that the total impact of Staff witness Ausum's sales and customer
7 count forecast on present revenue is an increase of \$28,280,885.

8
9 **Electric Rate Design**

10 Q. Please describe the general procedure that Staff uses to perform its rate design.

11 A. Following the review of the Company's testimony and exhibits, the general
12 procedure for performing rate design begins in evaluating the Company's rate
13 design model in Microsoft Excel. This evaluation involves verifying each of the
14 several hundred present rates hardcoded into the model, as well as all other
15 hardcoded input data such as rate of return on rate base. Staff compares present
16 rates in the rate design model to those in the Company's Commission-approved
17 rate book, while other data is audited to its original source such as Company
18 exhibits or witness testimony. Next, Staff evaluates the billing determinants for
19 each rate schedule to determine their reasonableness. Staff then analyzes the
20 functions or formulae used in the model to ensure they are calculating rates and
21 other information correctly or as expected and intended. If and when Staff
22 discovers errors or discrepancies, Staff submits audit requests to the Company for
23 further explanation. Unless absolutely necessary, Staff avoids shifting revenue

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 requirement between customer classes, which should be determined by the COSS.
2 However, adjustments to the revenue requirement by class are necessary for the
3 five standard adjustments described by Company witness Laura M. Connolly.²
4 Once Staff is confident in the state of Company's model, and after other Staff
5 experts have compiled adjustments to the revenue requirement, sales forecast, and
6 the cost of service study (COSS), Staff incorporates the outputs from those
7 models into the rate design model as the last step in the overall rate calculation
8 process. Staff adjusts the rate design model to incorporate any new rate design
9 proposals recommended by Staff followed by a final check of all functions,
10 hardcoded data, and model outputs before filing to ensure the rates Staff proposes
11 will generate Staff's recommended revenue requirement. Finally, Staff reviews
12 the resulting proposed rates and evaluates their coherence to general principles of
13 rate design such as stability, fairness, and efficiency.

14
15 **Rate Impact**

16 Q. What is the total impact of all of Staff's recommendations in this case on rates?

17 A. Incorporating all of Staff's recommendations, from individual account
18 adjustments to its recommended rate of return, results in an overall increase of
19 3.6% over present rates. Further detail on the exact impacts of Staff's
20 recommended rates on customer bills can be found in Staff Exhibit S-6, Schedule
21 F4.

² Direct Testimony of Company witness Laura M. Connolly, p 15-16.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 Q. What is the impact of Staff's revenue requirement, COSS, rate design, and
2 surcharges on residential rates?

3 A. Staff's rate design results in an overall increase of 5.0% over present residential
4 rates.

5 Q. What is the impact of Staff's revenue requirement, COSS, rate design, and
6 surcharges on general service secondary rates?

7 A. Staff's rate design results in an overall increase of 4.6% to general service
8 secondary rates.

9 Q. What is the impact of Staff's revenue requirement, COSS, rate design, and
10 surcharges on primary rates?

11 A. Staff's rate design results in an overall decrease of 0.2% to primary rates.

12 Q. What is the impact of Staff's revenue requirement, COSS, rate design, and
13 surcharges on unmetered and lighting rates?

14 A. Staff's rate design results in an overall decrease of 8.6% to unmetered and
15 lighting rates.

16 Q. What is the impact of Staff's revenue requirement, COSS, rate design, and
17 surcharges on retail open access (ROA) rates?

18 A. Staff's rate design results in an overall increase of 11.3% to commercial
19 secondary ROA rates and 12.8% to primary ROA rates.

20

21 **Demand Response Credits**

22 Q. Did the Company provide an updated calculation of demand response (DR)
23 credits as required by the Commission?

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 A. Yes. Company witness Steven Q. McLean calculated DR credits for customers
2 participating in tariff-based (i.e. not contractual only) DR programs.³ The
3 Company developed its updated DR credits to be valued at 75% of the cost of
4 new entry (CONE) for the Company's MISO zone. This value of DR has been the
5 basis of DR credits for many years, but the actual credits paid to customers have
6 not been updated with changes in either CONE or the amount of actual load
7 reduction produced by DR customers for some time. The Company does not
8 propose to change the currently approved DR credits because it argues that CONE
9 has increased by 20% from the prior year and resetting DR credits too often could
10 be "very challenging to participants."⁴

11 The current DR credit for the Company's residential air conditioner
12 peak cycling (ACPC) program is \$8 per summer month. The Company
13 recalculated the monthly per-customer DR credit for the ACPC program by
14 starting with 75% of the latest estimate of CONE, multiplying by the average
15 customer load reduction, and dividing by the number of summer months the credit
16 is available. Finally, the Company further adjusted the total by 50% to account for
17 administrative costs. This resulted in a new credit of \$9.50 per customer per
18 summer month.

19 The Company updated its calculation of the DR credit for its General
20 Interruptible Provision (GI) by starting with the same 75% of CONE but then
21 divided by 12 months, which results in \$7.95 per kW-month. In order to maintain

³ Direct Testimony of Company witness Steven Q. McLean, p 35-36.

⁴ Direct Testimony of Company witness Steven Q. McLean, p 35, line 15.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 the current \$1 price difference between summer and non-summer months the
2 resulting DR credit would be \$8.50 per kW-month in the summer and \$7.50 per
3 kW-month in the non-summer.

4 Q. When were DR credits last updated?

5 A. The current DR credits for the GI provision are \$7 per kW in the summer and \$6
6 per kW in the winter. Those credits were last updated 7 years ago in Case No. U-
7 17990 in 2017. In that same case the residential ACPC credit was set to \$7.84 per
8 month to reflect an average per customer load reduction of 1.12 kW times the \$7
9 summer GI DR credit. In subsequent cases the ACPC credit was rounded up to \$8
10 per month despite lower actual average demand reductions by customers.

11 Q. Does Staff agree with the Company's updated DR credits, even if the Company
12 does not propose to implement them?

13 A. No. Staff does not agree that it is appropriate to apply a 50% reduction to the
14 Company's updated ACPC credit because there is no support for such an
15 adjustment. The Company did not provide any evidence that administration of the
16 ACPC program equals half the value of the DR credit. Also, dividing the ACPC
17 credit by the number of summer months (3) is inappropriate because it assumes
18 that the *annual* value of the load reduction is recovered during the summer. This
19 is untrue because the ACPC program does not have any DR value when there is
20 no air conditioning load to reduce, such as during the winter months. The
21 Company's calculation essentially includes a year's worth of CONE into 3
22 months instead of 12. The Company's calculation of updated GI credits does not
23 suffer from the same problems as the ACPC credit.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 Q. What does Staff propose for DR credits?

2 A. Staff proposes to implement the \$8.50 per kW summer and \$7.50 per kW winter
3 credits for the GI provision as presented by the Company. This is a
4 straightforward method of applying the value of DR resources as 75% of CONE
5 which can be used as a basis for calculating other DR credits that are not based on
6 demand (i.e. monthly or on energy). Staff proposes to set the ACPC DR credit to
7 \$5 per month. Staff's proposal is calculated by multiplying the proposed summer
8 GI credit (\$8.50) times the expected 0.6 kW average customer load reduction,
9 which is rounded to the nearest whole dollar amount (from \$5.10 to \$5). This
10 essentially applies the same price for a demand reduction offered to all other DR
11 customers but converts it to the flat monthly credit to which residential ACPC
12 customers are accustomed. In future rate cases the credit can be adjusted if it is
13 shown that ACPC customers have increased their average load reduction. Staff's
14 proposal will correct the imbalance between monthly credits for the ACPC
15 program and the actual value of DR that is paid to other DR customers on the GI
16 provision or on Rate EIP. Furthermore, Staff's proposal will bring DR credits for
17 all customers up to date with the current value of DR, and not its value from 7
18 years ago.

19 Q. What is the impact of Staff's DR credit proposal?

20 A. Staff's proposal would result in a decrease in total DR credit expense of \$325k in
21 the test year. Specifically, it would result in an increase to the GI credits expense
22 of \$369k for primary customers and \$113k for secondary customers, but a
23 decrease to the ACPC credit expense of \$806k during the test year. It is important

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 to note that updating the GI credits will also affect DR credits for Rates GSTU
2 and EIP, which are derived by converting demand-based DR credits to energy-
3 based credits.

4 As part of its proposal to not update any DR credits the Company
5 argues that “Staff has repeatedly argued that the Company’s DR portfolio is
6 among the most expensive in the country and increasing the credits because
7 CONE has increased is not prudent at this time.” Staff’s proposal in the instant
8 case, however, would actually *decrease* the overall cost of DR credits to all
9 customers because the existing credits are misaligned with the actual benefits of
10 DR. Customers are currently over-paying for lower than expected demand
11 reduction from the ACPC and underpaying for GI provision load reduction, and
12 Staff’s proposal corrects this issue.

13 Q. What does Staff propose regarding DR credits?

14 A. For the reasons provided in this testimony Staff recommends that the Commission
15 adopt Staff’s proposal to set the ACPC DR credit to \$5 for the summer months
16 when the program is active and set the summer credit for the General Interruptible
17 Provision to \$8.50 per kW for the summer and \$7.50 per kW for the winter.

18

19 **Facilities Allowance**

20 Q. What is the Company’s proposal for providing Rate LED, the Company’s
21 economic development rate, a facilities allowance?

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 A. The Company “is proposing to add language to the tariff that would clarify a
2 facilities allowance would be applicable for customers on [Rate LED].”⁵

3 Q. How does the Company propose to calculate the facilities allowance?

4 A. The Company proposes to calculate the facilities allowance for each prospective
5 customer based on the net present value of margin based on their expected load
6 over the life of the contract. The facilities allowance would include power supply
7 revenues because, as the Company argues, DTE Electric Company (DTE)
8 includes power supply revenues in its facilities allowance for DTE’s Rate D13
9 (DTE’s economic development rate).

10 Q. How does DTE provide a facilities allowance for Rate D13 customers?

11 A. DTE’s tariff for Rate D13 includes the sentence “See Section C6 for construction,
12 system upgrade, and line extension policy.” Section C6 of both the Company and
13 DTE’s rate book contains line extension and service connection rules and policies.
14 This means that Rate D13 customers may receive the same line extension, or
15 facilities allowance, that is already available to other customers. For example,
16 commercial and industrial customers with less than 1,000 kW of expected load
17 may receive a standard allowance of two times the estimated annual revenue of
18 the customer for whom the line, or facilities, are being extended. As the Company
19 explained, this allowance would include power supply revenue. The Company’s
20 line extension tariff allows general service customers a line extension allowance
21 of three times the customer’s estimated annual revenue.⁶

⁵ Direct Testimony of Company witness Laura M. Connolly, p 23, lines 21-23.

⁶ Company rate book, Sheet No. C-27.00.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 Q. How does the difference in rate design and cost allocation between Rate LED and
2 standard rate offerings like Rate GPD affect the reasonableness of the Company's
3 proposed facilities allowance?

4 A. Rate LED is designed to charge customers the marginal cost of capacity and real-
5 time LMP for all energy supplied by the Company as well as the standard base
6 and delivery rates. Including delivery revenues in the facilities allowance is
7 acceptable since the potential new load on Rate LED could require marginal
8 distribution investment, and Rate LED already pays the same distribution rates as
9 other similar customers, which is based on embedded costs.

10 However, Rate LED charges for capacity based on CONE at the time
11 the Customer's contract is executed and for energy based on MISO real-time or
12 day-ahead locational marginal price (LMP). Rate LED customers also pay a
13 nominal contribution to embedded costs through the system contribution charge.
14 This implies that the Company does not need to produce additional capacity via
15 base rates to serve the LED customer. In other words, Rate LED does not
16 materially pay for embedded capacity costs now or in the future, as it does for
17 distribution. Therefore, the revenue associated with this marginal capacity should
18 not be included in the facilities allowance, as it is only enough to cover the
19 assumed costs of serving the customer, much lower than other similarly situated
20 customers, and the contribution to embedded costs is not material.

21 The theory behind a facilities allowance, or contribution in aid of
22 construction allowances, is to provide customers a discount for additional costs
23 they may cause by joining the Company's system. The additional revenue

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

provided by the new customer is assumed to make up for the initial discount and make all customers better off by adding one more paying customer from which the Company can recover costs. More new customers contributing to embedded costs puts downward pressure on rates for existing and future customers to a greater degree than the initial extra cost of extending the system.

This is not the case for Rate LED's capacity costs, because they will theoretically cause no more or less capacity cost than assumed to be covered by their revenues, and their revenues do not materially contribute to embedded costs. In other words, Rate LED customers will not eventually pay embedded costs and thus contribute to base revenues and make all customers better off. Only distribution revenue and revenue generated by the System Contribution Charge would be appropriate to include in a facilities allowance for Rate LED.

Q. How does the Company's proposal for a facilities allowance in the instant case differ from established line extension policy?

A. The Company's facilities allowance proposal differs from normal line extension policy in that it is based on the customer's margin for the *lifetime* of its contract, and not total revenue over a limited number of years. Rate LED contracts are limited to 20 years, so the Company's proposal essentially grants new Rate LED customers revenues over 20 years to be included in the facilities allowance rather than 3 years for a Rate GPD customer. If the entire contract net margin, as defined by the Company, is allowed to offset the cost to connect a new Rate LED customer then 20 years of benefit, albeit meager, of adding that new customer is erased.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 Q. Does attracting new load to the Company's economic development rate benefit
2 other customers as claimed by the Company?

3 A. No. Company witness Connolly argues that revenue from Rate LED is included in
4 miscellaneous revenue and then allocated to all rate schedules thereby lowering
5 rates. As discussed previously, Rate LED customers do not meaningfully
6 contribute to embedded power supply costs, so any additional revenue generated
7 by a customer on Rate LED would be overshadowed by the revenue that same
8 customer would generate on Rate GPD. Adding in the proposed facilities
9 allowance would capture what little benefit it is possible for rate LED to provide
10 to existing customers.

11 Q. Has the Commission previously decided on whether a facilities allowance for
12 Rate LED is appropriate?

13 A. Yes. The Company proposed in its previous rate case, U-21389, a facilities
14 allowance much like the one it proposes in the instant case. Staff opposed the
15 facilities allowance in the prior case for largely the same reasons as the instance
16 case. The Commission agreed with Staff and denied the Company's facilities
17 allowance proposal.

18 Q. What does Staff recommend regarding the Company's facilities allowance?

19 A. Staff recommends that the Commission reject the Company's facilities allowance
20 proposal. If, in its next rate case, the Company chooses to propose a facilities
21 allowance that will put Rate LED at parity with DTE's Rate D13, then the
22 Company should propose something similar to DTE's facilities allowance.
23

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

Other Tariff Issues

Q. Does Staff propose any other changes to the Company's tariffs?

A. Yes, notwithstanding any other tariff change proposals made by other Staff, Staff also recommends a clarification to the Company's proposal to add language allowing customers to receive land lease payments as bill credits. Converting what would otherwise be lease income for the customer into a bill credit could cause income tax reporting issues for that customer through no fault of the Company. In other words, if the customer fails to report the bill credit received from the Company as regular income, then the Customer could be liable for underreporting their tax obligation. Staff is concerned that what is otherwise be a well-meaning addition to the tariff in the name of customer satisfaction could accidentally implicate the customer in tax fraud if they are not careful with their accounting. For this reason, Staff recommends the Company include the following sentence at the end of the paragraph of Section C20.(A) on Sheet No. C-82.00: "The customer is wholly responsible for the tax implications of receiving land lease payments as bill credits." Staff would be accepting of a different but similar wording of the addition should Company prefer, subject to review.

DIRECT TESTIMONY OF DAVID W. ISAKSON
CASE NUMBER U-21585
PART II

1 **Recommendations Summary**

2 Q. Please summarize your recommendations.

3 A. Staff's recommendations are as follows:

4 1. Staff recommends the Commission approve Staff's present revenue of
5 \$4,685,350,000.

6 2. Staff recommends the Commission approve Staff's electric rate design.

7 3. Staff recommends the Commission approve Staff's proposed DR credits
8 of \$5 per month for the residential ACPC program, and \$8.50 per summer kW
9 and \$7.50 per winter kW for the GI and GI-2 interruptible provisions.

10 4. Staff recommends the Commission deny the Company's facilities
11 allowance proposal for Rate LED.

12 5. Staff recommends the addition of a clarifying sentence for the Company's
13 land lease tariff language proposal.

14 Q. Does this conclude your direct testimony?

15 A. Yes, it does.

Case No. U-21585

September 27, 2024

QUALIFICATIONS OF THERESA MCMILLAN-SEPKOSKI
CASE NUMBER U-21585
PART I

1 Q. Please state your name and business address.

2 A. My name is Theresa L. McMillan-Sepkoski. My business address is 7109 West
3 Saginaw Hwy, Lansing MI, 48917.

4 Q. By whom are you employed and in what capacity?

5 A. I am employed by the Michigan Public Service Commission (MPSC or
6 Commission) as an Audit Specialist in the Revenue Requirements Section of the
7 Regulated Energy Division.

8 Q. What is your educational background?

9 A. I graduated in 1981 from Mott Community College with an A.A.S. degree in
10 Accounting with a minor in Business Management. In June 2006, I graduated
11 from Baker College with highest honors and a B.B.A. degree with emphasis in
12 Accounting. Since becoming employed here at the Commission, I have
13 participated in numerous MPSC training sessions and attended the National
14 Association of Regulatory Utility Commissioners (NARUC) Advanced
15 Regulatory Studies Program.

16 Q. Please describe your professional background.

17 A. Prior to my employment at the MPSC, I worked in accounting in the public and
18 private sector for sixteen years after receiving my associate degree. I began my
19 employment at the Shiawassee County Health Department as an Accounts
20 Processor. From there my experience in accounting came from working for
21 Federal Forge Inc., also known as Bharat Forge Ltd. from an entry level position
22 in Accounts Payable and promoted to Controller. After that I worked for CSI Inc.
23 as an Assistant Controller/Human Resource Administrator. In December 2006,

QUALIFICATIONS OF THERESA MCMILLAN-SEPKOSKI

PART I

1 having completed my bachelor's degree, I began my employment with the
2 Michigan Public Service Commission and have continued through the present.

3 Q. Briefly discuss your experience with the MPSC.

4 A. I have served as the lead auditor, case coordinator, and performed audit work in
5 many types of cases for the MPSC. The types of cases have been gas and electric
6 rate cases, Power Supply Cost Recovery (PSCR) and Gas Cost Recovery (GCR)
7 reconciliation cases, Cooperative Times Interest Earned Ratio (TIER) review
8 cases, and various tracking mechanism cases. I have also testified before the
9 Commission on previous Revenue Requirement rate cases.

10 Q. Have you previously filed testimony before the MPSC?

11 A. Yes, I have filed testimony in the following cases:

12 U-15190 – Consumers Energy Company Gas Rate Case

13 U-15244 – Detroit Edison Company Electric Rate Case

14 U-15245 – Consumers Energy Company Electric Rate Case

15 U-15506 – Consumers Energy Company Gas Rate Case

DIRECT TESTIMONY OF THERESA MCMILLAN-SEPKOSKI
CASE NUMBER U-21585
PART II

1 Q. What is the purpose of your testimony?

2 A. The purpose of my testimony is to present the Michigan Public Service
3 Commission Staff's (Staff) adjustments to Consumers Energy Company's (the
4 Company, or Consumers) projected Employee Incentive Compensation Plan
5 (EICP) costs included in Operations and Maintenance expense (O&M), for the
6 test year ending February 28, 2026.

7 Q. Are you sponsoring any exhibits in this proceeding?

8 A. Yes, I am sponsoring the following exhibits:

9 Exhibit Title

10 S-15.1 U21585-SA-CE-011

11 S-15.2 U21585-SA-CE-013

12 **Employee Incentive Compensation Plan (EICP) Expense**

13 Q. What is EICP expense?

14 A. EICP expense is a portion of an employee's pay that is dependent upon achieving
15 target levels on performance measures.

16 Q. Has Consumers Energy requested recovery of EICP expense in this case?

17 A. Yes. The Company has included \$2,611,000 for EICP expense in the revenue
18 requirement per Company witness Amy M. Conrad's testimony, page 30, line
19 8, and Company Exhibit A-70 (AMC-3).

20 Q. What are the performance measures of the Company's EICP?

21 A. Company Exhibit A-68 (AMC-1) outlines the employee performance measures.
22 The measures are categorized as operational measures. There are six operational
23 performance measures.

DIRECT TESTIMONY OF THERESA MCMILLAN-SEPKOSKI
CASE NUMBER U-21585
PART II

1 Q. How do employees earn the incentive compensation?

2 A. Employees earn EICP by achieving target levels in each performance measure.
3 Examples of target levels found on Exhibit A-68 (AMC-1) page 2 of 4 are
4 achieving greater than or equal to 170 for the Electric Reliability (System
5 Average Interruption Duration Index) and a Customer Experience Index of greater
6 than or equal to 73, achieved at target level to earn 100% of the proposed EICP
7 expense requested for recovery in this case. Per Company Witness Conrad, the
8 Company has discontinued determining target levels at absolute goal achievement
9 to individual banded goals that provide each measure with its own threshold,
10 target, and maximum performance goal for achieving a certain level of payout.

11 Q. Describe the changes the Company has made to its request for inclusion of the
12 EICP expense in rates.

13 A. First, the Company has excluded the costs for short-term incentive compensation
14 related to financial measures. Secondly, it has included the costs of the short-term
15 incentive compensation based on operational measures for the top five (5)
16 officers in the revenue requirement. Prior to Consumers Energy electric rate case
17 U-21224, the Company had not included incentive compensation costs for the top
18 five (5) officers.

19 Q. Does Staff support the Company's request for EICP expense based on operational
20 measures in rates?

21 A. Staff supports the request for operational measures EICP expenses for non-union
22 Employees in the amount of \$2,196,300, but not for the EICP expenses for the
23 top five officers that have been included in the current case. The costs for the

DIRECT TESTIMONY OF THERESA MCMILLAN-SEPKOSKI
CASE NUMBER U-21585
PART II

1 EICP incentive compensation for the top five officers for the projected test year
2 are \$414,700. (see Staff Exhibit S-15.1)

3 Q. Please explain why Staff does not recommend the top five officers EICP expense
4 being approved.

5 A. Staff has two points for not recommending including the top five officers
6 incentive compensation. First, in Company witness Amy M. Conrad's testimony,
7 pages 10-24, she discusses Consumers compensation philosophy. Employees'
8 salaries should be comparable to the market median, within a target level plus or
9 minus 5% of the market median, giving examples of Consumer's pay levels
10 compared to market levels. On page 21, lines 14-22, officer compensation
11 packages are targeted at the median or 50th percentile of the market.

12 Staff asked for the compensation level of the top five officers compared to market
13 median. The Company declined to provide this information to Staff (see Staff
14 Exhibit S-15.2, page 1 of 2) through audit responses. The Company instead
15 offered for Staff to examine report extracts of the Pay Governance report, with
16 conditions attached:

17 -Reviewed in the presence of an appropriate CMS representative

18 -Maintain the confidentiality of the extracts

19 -May not copy or distribute the extracts to any other party

20 -Used only for the sole purpose of this inquiry

21 -Exempt Pay Governance from any public disclosure/Freedom of Information
22 request or open records acts

23 (See Exhibit S-15.2, page 2 of 2).

DIRECT TESTIMONY OF THERESA MCMILLAN-SEPKOSKI
CASE NUMBER U-21585
PART II

Staff had signed a Non-Disclosure Agreement (NDA), which binds Staff to the terms of the Protective Order. The Commission stated that the confidentiality of the third-party intellectual property would not be compromised by providing the information under protective order. See MPSC Case No. U-21389, Opinion and Order, March 1, 2024, page 194. Staff also believes that since an NDA was filed, the Company should have provided the material to Staff to review, instead of requiring Staff to conduct an audit of the material at the Company offices under Company supervision. With a signed NDA, all material would remain confidential, and be disposed of in accordance with its confidentiality properly. Secondly, in Consumers' previous electric rate case, U-21389, Company witness Conrad states in rebuttal testimony that beginning in 2022, 30% of the top five officers' incentive compensation is more directly benefiting customers. (TR 4 1260.) Yet when accessing the CMS Energy Corporation website, the bios for the top 5 officers lists each first as CMS Energy Corporation officers, and officer of Consumers Energy Company second. When accessing the Consumers Energy website, Staff did not find the bios of the Company officers. Within the Corporate website, the Corporate Governance Principles state that the role of the Chief Executive Officer (CEO)/President is to manage the business operations of the Corporation, with the support of the senior management team, along with other officers and employees of the Corporation, and the CEO is the primary spokesperson for the Corporation. In analyzing this information, Staff does not come to the same conclusion as the Company witness Conrad presented, that the top five officers' portion of incentive compensation benefits customers directly.

DIRECT TESTIMONY OF THERESA MCMILLAN-SEPKOSKI
CASE NUMBER U-21585
PART II

1 Staff believes that the customers of Consumers should not bear the burden of this
2 cost for these top five highly compensated individuals.

3 For the reasons stated above, Staff recommends disallowance of inclusion in the
4 revenue requirement the incentive compensation expense of \$414,700 for the top
5 five officers.

6 Q. Please summarize Staff's recommendations in the current case.

7 A. Staff recommends the ALJ and the Commission approve \$2,196,300 for EICP
8 expense for the projected test year, but disallow \$414,700 EICP expense for the
9 top five officers.

10 Q. Does this conclude your testimony?

11 A. Yes, it does.

* * * *

Case No. U-21585

MICHIGAN PUBLIC SERVICE COMMISSION

September 27, 2024

QUALIFICATIONS OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART I

1 Q. Please state your name, business address and occupation.

2 A. My name is Kirk D. Megginson and my business address is 7109 West Saginaw
3 Highway, Lansing, MI 48917. I am employed by the Michigan Public Service
4 Commission (MPSC or Commission) as a Financial Specialist in the Revenue
5 Requirements Section of the Regulated Energy Division.

6 Q. Please describe your educational and professional background.

7 A. I graduated with a Bachelor of Science degree in Mechanical Engineering from
8 Michigan State University in March 1991 and received my Master of Business
9 Administration degree with a concentration in Finance from Clark Atlanta
10 University in May 2002.

11 From 1991 to 2000, I worked for the Michigan Consolidated Gas
12 Company as an account manager, primarily responsible for managing the natural
13 gas transportation accounts of certain industrial and commercial clients in Wayne
14 and Washtenaw counties.

15 In December 2002, I began work as a Financial Analyst at the MPSC. As
16 a Financial Analyst, I analyzed and reported on the financial statistics of regulated
17 Michigan jurisdictional utility companies and assisted the MPSC Revenue
18 Requirements section in utility rate case hearings and other projects as necessary.

19 In October 2008, I transitioned to a Financial Specialist and currently provide
20 Staff with expert testimony on capital structure development, debt and equity
21 costing, business and credit risk analysis, and other finance-related issues in rate
22 case proceedings.

23 Q. Have you received ongoing training since joining the MPSC?

QUALIFICATIONS OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART I

A. Yes. In addition to my academic training, I have attended several seminars and workshops on electric and gas utility financial analysis, credit risk and rating analysis and accounting and auditing methodology while employed at the MPSC. In August 2003, I attended the two-week regulatory studies program offered by the Michigan State University, Institute of Public Utilities, which covered various aspects of utility regulation and energy sector fundamentals. I attend assorted segments of the regulatory studies program and other related seminars as practical. I have also attended training sessions provided by Standard & Poor's on credit rating development and on regulatory finance provided by industry experts.

Q. Have you participated in other rate increase cases prior to this case?

A. Yes, I have. I have participated in the following rate increase request cases:

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 Q. What is the purpose of your testimony in this proceeding?

2 A. The purpose of my testimony is to provide a recommendation on behalf of the
3 Michigan Public Service Commission Staff (Staff) regarding the recommended
4 capital structure, return on common equity (ROE) and overall rate of return that
5 Consumers Energy Company's Electric Division (Consumers, CE-Electric or the
6 Company) should be allowed to earn on its Michigan jurisdictional electric utility
7 investment. The recommendations provided in this testimony are based on a large
8 degree of technical expertise and professional judgment in the area of financial
9 analysis.

10 Q. Are you sponsoring any exhibits on behalf of Staff in this proceeding?

11 A. Yes. I am sponsoring Staff Exhibit S-4; Schedules D-1 through D-5:

	<u>Schedule</u>	<u>Page</u>	<u>Title</u>
12			
13	D-1	1	Test Year Overall Rate of Return

10

11 Q. Was the proposed Exhibit S-4 prepared by you and/or under your direction?

12 A. Yes.

13 Q. Please summarize Staff's capital structure and ROE recommendation.

14 A. Staff recommends a capital structure with a permanent equity layer of 49.92% and
15 a return on equity of 9.85%. Staff's ROE is the midpoint of Staff's 9.35% -
16 10.35% ROE range. Staff's recommended ROE is 5 basis points less than the
17 Company's current authorized ROE of 9.90%.

18 Q. How did Staff conduct its ROE analysis?

19 A. Since CE-Electric is not a publicly traded company, to aid in the determination of
20 a fair return on equity for the Company, a group of eight publicly traded electric
21 and/or electric-gas utility companies was used as a comparable proxy to CE-
22 Electric. The proxy group's data was used in the traditional Discounted Cash
23 Flow (DCF) model and both the historical and projected Capital Asset Pricing
24 Models (CAPM). In addition to those traditional models, a Bond Yield + Risk
25 Premium analysis and a review of electric ROE authorizations from other state

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

jurisdictions was also considered in this case. Staff's 9.85% ROE recommendation considers the Commission request for prudence in ROE recommendations, as well as CE-Electrics' currently authorized 9.90% ROE and the Company's 10.25% ROE request as outlined in its application. The Company requests a 50.75% equity layer in this case, which is up from the 50.02% equity layer authorized in the Company's last electric rate case No. U-21389. Staff recommends an evenly balanced capital structure in this case.

Q. How is your testimony structured?

A. My testimony is structured in two parts. Part I corresponds to my Schedules D-1 through D-4 exhibits, which describes all the ratemaking capital structure components and their cost rates other than common equity. Part II describes my recommended common equity balance and cost of equity analysis and recommendation. That testimony corresponds to my Schedule D-5 exhibits. The remainder of my exhibits, Schedule D-6, are audit responses from the Company.

Q. Please outline Consumers Energy's current credit rating.

A. Most of Consumers Energy's long-term debt is in the form of first mortgage bonds that the rating agencies label as senior secured debt. This is the first rating shown on Exhibit A-34, Schedule D-6, page 1 of 1, provided by Company witness Marc Bleckman. Standard & Poor's (S&P) rates Consumers Energy's senior secured debt "A," which was raised from "A-" in December 2014. Moody's rates Consumers senior secured debt "A1," which was reduced from "Aa3" in May 2021. Fitch rates Consumers senior secured debt "A+," which was raised two notches from "A-" in March 2016.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 Q. Have the rating agencies held the Company's credit rating steady despite the one
2 notch revision from Moody's in 2021?

3 A. Yes. S&P has held the Company's credit rating steady for approximately 10
4 years and Fitch has held it steady for over eight years. Moody's one notch
5 downward revision from Aa3 (equivalent to S&P's AA- rating) put the
6 Company's credit rating more in line with the other two agencies ratings. The
7 prior Moody's rating appeared to be an outlier.

8 Q. Did Moody's downward revision negatively impact Consumers Energy's ability
9 to access capital at reasonable rates?

10 A. No. According to the Company's Exhibit No. A-35 that outlines recent country-
11 wide utility debt issuances, Consumers Energy issued \$300 million in long-term
12 debt in August 2021 at a very competitive rate and credit spread, a few months
13 after the Moody revision. The Company's last 30-year debt issuance was in
14 August of 2022 and again, that issuance was at a competitive rate and credit
15 spread. Thus, despite the downgrade from Moody's, the revision did not appear
16 to affect the Company's ability to secure reasonably and moderately priced debt
17 in the future. The Company has indicated over \$1.5 billion in long-term debt
18 issuances in this rate case alone.

19 Q. Interest rates impact utility statistics and analyses in rate proceedings. Has the
20 Federal Reserve opined on the movement of interest rates in the months
21 coinciding with the test period?

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 A. Yes. The Federal Open Market Committee (Fed) anticipates a series of rate cuts
2 to the federal funds rate¹. According to a timeline of events, on March 16, 2022,
3 the Fed started the first of its federal funds rate increases from 0.25% to 0.50%.
4 Subsequently, the Fed raised the federal funds rate by 25 to 75 basis points each
5 month or more to 1.75% to 2.50% by July 27, 2022. From that point on, the Fed
6 steadily increased the federal funds rate to its current 5.25% - 5.50% reached in
7 July 2023. The rate has held steady since that point. However, the Fed is
8 expected lower interest rates this year. In a recent S&P report, the Fed stated
9 “The easing cycle will lower the target range to 2.50% - 2.75% by mid-2026. The
10 December first-rate cut was a very close call. It was based on data arriving before
11 we released the forecast on July 30. The odds of a September cut have increased
12 since then...a soft July employment report on August 2, with payroll gains
13 slowing and the unemployment rate rising to 4.3%. Following the volatility in
14 global financial markets in early August, many were calling for a cut of 50 basis
15 points at the September meeting, with some even suggesting the Fed should make
16 an emergency intermeeting cut.”² Thus, the consensus is that the Fed could cut
17 rates as early as September 2024 but most certainly in December 2024. In
18 addition, the Federal Reserve Bank of St. Louis illustrates a graph projecting the

¹The U.S. Fed Funds Rate

The U. S. Federal Funds Rate is the interest rate a U.S. Federal Reserve depository institution (bank, S&L or Credit Union) will charge another bank to borrow their excess reserves held at the Federal Reserve. These reserves, or Federal Funds, are traded by banks (usually overnight) to meet their reserve requirements or enable the clearing of financial transactions.

² S&P Global Market Intelligence – ‘US Economic Outlook’ report, August 2024

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 federal funds rate from its current standing to its projected position in 2026. The
2 graph shows the federal funds rate at start of year 2025 at 4.1% and decreasing to
3 3.1% at the beginning of 2026.³ Therefore, based on the Fed's anticipated action
4 of lowering interest rates, borrowing costs will likely lower and the Company's
5 access to those borrowings should not diminish during the test year.

6 Q. Is Staff's ROE recommendation still reasonable even in this current period of
7 elevated interest rates?

8 A. Yes. Staff's 9.85% ROE recommendation is at the high end of a fair return for
9 the Company. The Company's 2023 embedded long-term debt cost rate in this
10 rate case is 4.00%. Staff's 9.85% ROE recommendation provides the Company
11 with 5.85% in spread value above its long-term debt cost. That means that Staff's
12 recommended ROE is very suitable compensation for the Company's equity.
13 Even more so, Staff's ROE is only 5 basis points below the Company's currently
14 favorable 9.90% rate, and is well above the June 2024 nation-wide average ROE
15 of 9.68%.

16 Q. Has the Company indicated a reduction in its future capital outlay considering
17 higher interest rates and to improve its credit ratio margins?

18 A. No. The Company expressed a sustained commitment to robust capital spend in
19 its transmission, distribution system, maintenance, relocation and clean energy
20 programs. The Company plans to spend over \$15 billion in the next 5 years or so,
21 averaging around \$3-\$4 billion per year in expenditures. In general terms, a

³ Federal Reserve Bank of St. Louis – website: <https://fred.stlouisfed.org/series/FEDTARMD>

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 reduction in capital spend lowers the need for long-term borrowing and improves
2 important credit metrics such as the FFO-to-Debt ratio. However, the Company
3 has expressed no desire to curtail spending now or in the future.

4 Q. In this case as in past rate cases, the Company opined on certain of its financial
5 metrics, primarily its funds from operation to debt ratio (FFO-to-Debt). Did Staff
6 review and provide an analysis of this ratio in this case?

7 A. Yes. The Company routinely discusses the importance of maintaining a solid
8 FFO-to-debt ratio to maintain its current credit status. With that in mind, I
9 conducted an FFO-to-debt analysis and used the following FFO-to-Debt ratio
10 formula taken from S&P:

11 Funds From Operations / Total Debt = Net income from operations +
12 depreciation & amortization + deferred income taxes + other noncash items
13 Long-term debt + current maturities + commercial paper and other ST-debt

14 I reviewed 2023 data from the Company's 10-K report filed with the Securities &
15 Exchange Commission (SEC) in February 2024 to obtain my inputs. The
16 following FFO-to-Debt ratio was calculated:

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

Sheet 1.

Staff - FFO-to-Debt Analysis	
(2023 Data)	
	2023 10-K
<u>FFO</u>	<u>(in millions)</u>
NOI	\$ 867
Dep + Amo	\$ 1,137
Def Inc. Tax	\$ 156
<u>Other non-cash</u>	<u>\$ (123)</u>
Funds from Ops	\$ 2,037
<u>Total Debt</u>	<u>2023 10-K</u>
LTD	\$ 10,037
Current Maturities	\$ 731
<u>STD (Letters of Credit)</u>	<u>\$ 27</u>
Total Debt	\$ 10,795
FFO/Debt	18.87%

As you can see from Sheet 1, the FFO-to-Debt ratio was 18.87%, which is solidly above the 15% -16% ratio threshold that S&P said could be cause for concern if maintained on a continuous basis. Moreover, in the Moody's May 2024 credit opinion, the agency expects Consumers Energy's Cash Flow from Operations (pre-working capital) to Debt to maintain an average ratio around 20-21%.⁴ Also, S&P's August 2023 ratings report noted that Consumers Energy's FFO-to-Debt ratio was expected to maintain between 18% - 20% over the next 3-5 years.⁵ Thus, ratings agencies don't foresee any major deterioration or long-lasting decline in the FFO-to-Debt ratio for Consumers Energy.

Q. Has Consumers Energy been positively impacted by Michigan's regulatory framework?

⁴ Moody's Ratings – "Credit Opinion" – Infrastructure and Project Finance (May 31, 2024)

⁵ S&P Global Ratings – "Ratings Score Snapshot" – Ratings Direct (August 17, 2023)

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 A. Yes. Consumers Energy has filed several electric rate cases since the passage of
2 Public Act 286, as later modified by PA 341, and the Company has taken
3 advantage of the favorable provisions in the legislation, as well as the benefit of
4 other regulatory mechanisms approved by the Commission over the years. Credit
5 rating agencies emphasize a ‘regulatory framework’ component that focuses on
6 the utility’s ability to effectively manage the regulatory process, recover its costs
7 and earn stable returns. Act 286 addressed this regulatory concern almost
8 exclusively. Staff, in Consumers Energy’s electric rate Case No. U-16794,
9 outlined the positive benefits of PA 286. Staff explained that “*Act 286 allows a*
10 *utility to: (1) use projected costs and revenues for a future consecutive 12-*
11 *month period in developing its requested rates and charges; (2) self-implement*
12 *all or a portion of its requested rate increase after 180 days of filing its complete*
13 *application; (3) require that the Commission issue an order within 365 days of a*
14 *utility’s filing or the company’s filing would be considered approved; (4) limit*
15 *customer choice or use of alternative electric suppliers to 10% of an incumbent*
16 *utility’s weather-adjusted retail sales; (5) file for a new gas or electric rate*
17 *increase case 12 months after the filing of a complete application from a*
18 *previous gas or electric rate case.*

19 *It is clear from the summary above that Act 286 can be deemed*
20 *utility favorable as it grants utilities several beneficial regulatory features that*
21 *were unavailable in the past. The provisions allow for a utility to recover its*
22 *requested revenue shortfall in a much speedier manner along with additional*
23 *legislative protections from alternative energy supplier competition. This*

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 *regulatory framework helps utilities maintain a steady cash flow stream or at*
2 *least lessen their cash flow volatility with the ability to recognize and recover*
3 *future expenditures in rates prior to the completion of a rate case at hand.*⁶

4 On top of the PSCR, Energy Waste and Renewable Energy mechanisms approved
5 for several years now, the Company has an Investment Cost Recovery mechanism
6 for certain distribution capital spending approved over the next two years, with
7 designs on increasing the scope and impact of the mechanism put forth by the
8 Company in this case.⁷ Thus, Michigan legislation and this Commission has
9 clearly been utility friendly and beneficial.

10 Q. Have credit rating agencies commented on the viability and supportiveness of
11 Michigan's regulatory framework?

12 A. Yes. Credit rating agencies routinely comment on the credit supportiveness of
13 Michigan regulation. In a May 2024 report from Moody's, the agency remarked
14 "Consumers Energy is regulated in Michigan by the MPSC, which has a
15 regulatory framework that we view to be more credit supportive than most other
16 states. As a result of the 2008 and 2016 energy legislation in Michigan, the
17 regulatory framework was streamlined, improving both the rate case process and
18 the timeliness of cost recovery. Michigan utilities benefit from numerous
19 formulaic rate adjustment mechanisms that provide a high degree of cash flow
20 stability and assurance of recovery."⁸ In its August 2023 report, S&P remarked
21 "We view Michigan's regulatory construct as above average compared to peers

⁶ Consumers Electric Rate Case, MPSC Case No. U-16974, 5 TR 1092-1093.

⁷ See CE-Electric witness H. Myers direct testimony, p 26.

⁸ Moody's Investor Services – Credit Opinion (31 May 2024)

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 because of the benefit of a streamlined 10-month rate case process and various
2 constructive rate mechanisms, such as the use of forward test-years, power supply
3 and natural gas cost rider adjustments, and partial decoupling of the gas
4 business... that help the Company earn its allowed ROE and minimize regulatory
5 lag.”⁹ It is clear that credit rating agencies acknowledge that Michigan has a very
6 equitable regulatory environment that is supportive of a utility’s ongoing business
7 and financial health.

8 Q. Have other entities commented on the regulatory environment here in Michigan?

9 A. Yes. According to S&P’s Regulatory Research Associates (RRA), the Michigan
10 commission is rated in the top tier, i.e. above the national average, in terms of
11 utility credit supportive regulation.¹⁰ This signifies that the Michigan
12 commission has proactively considered the health and welfare of Consumers
13 Energy and the other regulated utilities here in Michigan. Thus, many analysts
14 and rating’s agencies acknowledge that Michigan has a very welcoming
15 regulatory environment and is supportive of a utility’s ongoing financial health.

16

17 **Part I. Capital Structure Balance and Component Cost Development**

18 Q. Please start by summarizing the recommended ratemaking capital structure
19 balances of Staff and the Company.

20 A. The following chart outlines the capital structure balances recommended by the
21 Company and Staff:

⁹ S&P Global – Ratings Direct (Aug. 17, 2023)

¹⁰ S&P Global Rating – Industry Credit Outlook 2024 – North America Regulated Utilities, p. 9 (Jan. 9, 2024)

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

Chart 1.

Components (000)	Company	Staff
Long-Term Debt	11,956,227	11,956,227
Preferred Stock	37,315	37,315
Common Equity	12,3600,000	11,956,972
Short-Term Debt	281,200	281,200
Deferred FIT	4,430,000	4,430,000
Job Development Investment Tax Credits	116,000	116,000

1 Thus, according to Chart 1, Staff agrees with all of the Company's recommended
2 balances except for common equity.

3 Q. Please explain your recommended common equity balance.

4 A. I considered the Company's actual common equity balance through June 2024. I
5 then followed the Company's preferred method for estimating retained earnings
6 from 2023 net income and approximated \$174 million in retained earnings to the
7 end of the test year. This equated to \$14.50 million added to the equity balance
8 each month from July 2024 to February 28, 2026.

9 Q. Did you recognize the Company's equity infusion request in this case?

10 A. Yes, but not to the level requested by the Company. In its application, the
11 Company projected an equity infusion schedule of \$385 million in September
12 2024, \$525 million in February 2025, \$500 million in June 2025, and \$475
13 million in February 2026 from its parent CMS Energy. I modified the proposed
14 equity infusions.

15 Q. How did you modify the proposed equity infusions?

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 A. I proposed an equity infusion schedule of \$385 million in September 2024 and a
2 February 2025 infusion amount of \$555 million. No other infusions were
3 recognized after that. This resulted in an even 50-50 capital structure for
4 Consumers Energy in this case. The Company acknowledged that its equity
5 infusions were set up to establish and maintain a 50.75% equity layer. However,
6 the Commission has provided detailed commentary with respect to the desired
7 direction of the Company's ratemaking capital structure over the years. The
8 Commission stated in its December 22, 2021, Order in Case No. U-20963:
9 ...the Commission believes a capital structure that is roughly balanced between
10 debt and equity strikes the appropriate balance between ensuring access to capital
11 at attractive rates, on the one hand, and maintaining customer affordability on the
12 other.¹¹
13 Furthermore, the Commission remarked in its September 2019 Order in
14 Consumers Energy's Gas Case No. U-20322:
15 The Commission continues to find that Consumers' treatment as a stand-alone
16 company for ratemaking purposes requires it to maintain a capital structure that is
17 evenly balanced between debt and equity.¹²
18 The Commission stated in its February 2017 Order in Consumers Energy's
19 Electric Case No. U-17990:
20 The Commission desires to arrive at an optimized capital structure that is both
21 supportive of planned infrastructure investments yet is not unnecessarily
22 burdensome on ratepayers. The Commission also anticipates that a cycle of
23 heavier-than-usual investment will present an ideal opportunity to rebalance
24 Consumers' capital structure to reach its 50/50 goal¹³.

¹¹ MPSC Case No. U-20963, 12/22/2021 Order, p 220

¹² MPSC Case No. U-20322, 9/26/2019 Order, p 62

¹³ MPSC Case No. U-17990, 2/28/2017 Order, p 64

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 A few months later, in the Commission's July 2017 Order in Consumers Energy's
2 Gas Case. No. U-18124, the Commission noted:

3 (The Commission) disagrees with Consumers that its proposed capital
4 structure is sufficiently balanced to avoid scrutiny. The Commission cannot
5 overemphasize the company's responsibility to rebalance its equity and debt
6 capital.¹⁴

7 Those orders highlight the Commission's legitimate concern about the size and
8 makeup of the Company's ratemaking capital structure. The Commission desires
9 to see a 50/50 capital structure submitted by the Company in a future rate case.
10 Staff gradually lowered its equity layer recommendations in previous rate cases,
11 subsequently recommending a 50.02% equity layer in the Company's last electric
12 rate case No. U-21389, in adherence with the Commission's request. Staff's
13 49.92% recommendation in this case aligns with the Commission's repeated
14 request for balance and provides the Company an opportunity to improve its
15 credit standing and maintain its wide access to capital markets, while being less
16 costly to ratepayers.

17 Q. Have other intervenors recommended a balanced capital structure for Consumers
18 Energy in previous rate cases?

19 A. Yes. The Attorney General (AG) has recommended a 50/50 capital structure for
20 Consumers Energy in the majority of past rate cases. The Association of
21 Businesses Advocating Tariff Equity (ABATE) has also advocated for a 50%
22 ratemaking equity level in previous rate cases.¹⁵ The AG supports a level capital

¹⁴ MPSC Case No. U-18124, 7/31/2017 Order, p 45- 46.

¹⁵ ABATE Witness C. Walters – CE Electric Case No. U-21224- Direct testimony, p 69.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 structure by recommending a reduction to common equity with a corresponding
2 increase in the Company's long-term debt component. Though Staff develops its
3 capital structure differently, the objective is still the same, a capital structure that
4 is evenly split between debt and equity.¹⁶ Staff's 50/50 capital structure along
5 with its favorable 9.85% ROE recommendation should be adopted.

6 Q. You state that common equity is costlier to ratepayers than debt, can you illustrate
7 that point?

8 A. Yes. Based on the Company's embedded historical debt schedule ending
9 December 2023, the Company's average long-term debt cost was 4.00%.¹⁷ Thus,
10 for every dollar of debt in the capital structure, it cost ratepayers approximately
11 4.0 cents. The Company provided a ROE table of pre and post-tax reform in its
12 gas rate Case No. U-18424. I use the table in my analysis below:

13
$$\text{Pre-Tax ROE} = \text{ROE} / (1 - \text{Tax Rate})$$

14

	<u>Pre-Tax Reform</u>	<u>Post-Tax Reform</u>
15 Authorized ROE	9.90%	9.90%
16 Tax Rate	35.0%	21.0%
17 Pre-Tax ROE	<u>15.23%</u>	<u>12.53%</u>

¹⁶ Staff has no issue with the AG's method of arriving at a 50/50 capital structure. The addition and deletion of debt and equity in the capital structure appears to be a reasonable process to arrive at a level capital structure.

¹⁷ Cost of LT-Debt for Historical Year ended December 31, 2023. Exhibit No. A-4 (JRC-23), Schedule D-2, p 1 of 1.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

Hence, prior to tax reform, for every dollar of common equity added to the capital structure, it cost ratepayers 15.2 cents or roughly 3.5x the Company's cost of debt of 4.0 cents. Post tax reform, it cost ratepayers 12.5 cents for every dollar added of common equity, or roughly 3x the cost of debt. Thus, the proper equity to debt ratio is an important objective to maintain reasonable costs to ratepayers. Staff's evenly balanced 49.92% equity recommendation in this case helps lessen the burden on stressed ratepayers, especially in this environment of elevated inflation and economic anxiety. Higher costs for utilities and household necessities is a real factor for many ratepayers and keeping energy costs affordable is critical to maintaining the livelihoods of most Michigan residents.

Q. Please summarize the recommended cost rates of Staff and the Company.

A. The chart below outlines the cost rates recommended by the Company and by Staff:

Chart 2.

Components	Company	Staff
Long-Term Debt	4.35%	4.25%
Preferred Stock	4.50%	4.50%
Common Equity	10.25%	9.85%
Short-Term Debt	4.97%	4.09%
Deferred FIT	0.00%	0.00%
Job Development Investment Tax Credits	Blended cost	Blended cost

Based on Chart 2, Staff disagrees with the Company's cost rates for LT-debt, ST-debt and common equity. Staff agrees with the other cost rates.

Q. Please explain the difference in Staff's and the Company's LT-debt cost rate.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 A. Staff and the Company's LT-debt cost rate difference stems primarily from the
2 cost rates estimated to Consumers forecasted new debt issuances in 2024 and
3 2025. The Company projected a long-term debt issuance of \$665 million in
4 August 2024, and May and August 2025 debt issuances totaling \$925 million.
5 The Company provided a cost rate for the August 2024 debt issuances at 5.82%,
6 and the May and August 2025 debt issuances at 5.80%. I estimated a lower cost
7 rate of 5.20% for the 2024 debt issuance and 4.69% for the 2025 debt issuances. I
8 used 30-year bond yield forecasts from IHS Markit (May 2024), and the average
9 30-year bond yield forecasts provided by Econforecasting.com (Aug. 13, 2024),
10 along with a credit spread of 1.05% for each issuance. Staff agreed to the other
11 LT-Debt cost rates and fees estimated by the Company. Staff recommended an
12 overall LT-Debt cost rate of 4.25%, which is shown on Exhibit No. S-4, Schedule
13 D-2, p 1 of 1. This cost rate is 10 basis points less than the Company's cost rate
14 of 4.35% and should be adopted by the Commission.

15 Q. Please explain the difference in Staff's and the Company's ST-Debt cost rate?

16 A. The difference in Staff's ST-Debt cost rate and the Company's ST-Debt cost rate
17 stems primarily from the cost rate applied to the renewables liability component
18 of the ST-Debt balance. The Company provided a 4.17% cost rate to the \$78.5
19 million renewable liability balance, while I provide a 1.00% cost rate to the
20 balance. My cost rate is based on Mr. Bleckman's cost rate assumption of the
21 renewable's liability in Case No. U-21197, in which the Company noted that the
22 short-term borrowing rate for the liability was assumed at 1.00% for years (2022 –
23 2029). My projected cost rate for the Company's Commercial Paper facility is the

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 same as the Company's Commercial Paper cost rate at 4.17%. Thus, with the
2 renewables liability cost rate change, Staff's overall ST-Debt cost rate is 4.09%
3 compared to the Company's unreasonably high-cost rate of 4.97%. The
4 Commission should adopt Staff's much more practical cost rate. My ST-Debt
5 analysis is outlined on Exhibit S-4, Schedule D-3, p 1 of 2.

6 Q. Should the Commission take a more in-depth review of the Company's Short-
7 term debt facilities and the treatment of its Renewables Liability balance?

8 A. Yes. Staff believes the Company's short-term debt facilities are excessive and
9 overly burdensome to ratepayers. Staff also believes the renewables liability
10 balance should not be charged back to ratepayers as a form of short-term debt.

11 Q. Please explain Staff's concern with the Company's ST-debt facilities.

12 A. Staff has noted in past rate cases that it believes the Company's ST-debt facilities
13 may be unnecessarily top-heavy and disproportionate.¹⁸ On page 27 of witness
14 Bleckman's testimony, he states "Access to the commercial paper market,
15 however, requires an equivalent amount of revolving credit capacity as a
16 "backstop"; therefore, of the Company's \$1.35 billion of revolving credit
17 facilities, \$500 million is used to support commercial paper issuance. The
18 remaining \$850 million of revolver capacity is a vital backstop for capital
19 expenditures and upcoming long-term debt maturities."¹⁹ However, the
20 Company's assessment is incorrect. As noted on page 24 of Mr. Bleckman's
21 testimony, the Company has \$1.85 billion in ST-debt borrowing capacity with

¹⁸ See Staff witness Megginson testimony in U-20314 and U-15986.

¹⁹ CE-Electric witness M. Bleckman, direct testimony, p 27.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 \$1.35 billion in credit capacity available, not \$850 million (not mentioning the
2 \$500 million in intercompany borrowing capability). Consumers commercial
3 paper facility is backstopped by \$500 million of the Company's \$1.1 billion JP
4 Morgan Revolver, which leaves \$600 million in capacity availability. Adding the
5 Scotiabank Revolver capacity of \$250 million along with the \$500 million
6 commercial paper facility, equates to \$1.35 billion in ST-debt capacity, not \$850
7 million. To my knowledge, the Company has never maxed out its \$500 million
8 Commercial Paper facility, let alone any of its other revolver facilities. More
9 importantly, customers are paying full freight for the Company's \$1.85 billion in
10 overall ST-debt capacity. Customers not only pay for the interest on the
11 Company's borrowings, but also pay commitment, continuation and unused fees
12 on the full capacity of all the revolvers, as well as all costs related to the upfront
13 fees at the inception of the revolving credit facilities. This is on top of fees
14 related to any letters of credit associated with the revolvers and fees related to the
15 continuance of the Commercial Paper program.

16 Q. Has the Company made consistent use of most or even some of its \$1.35 billion in
17 revolver facilities?

18 A. No. Staff asked an audit request whether the Company has used its JP Morgan or
19 Scotiabank revolver in the last five years or so. The Company responded no.
20 Staff does not believe the Scotiabank revolver has ever been used. Furthermore,
21 Staff asked in an audit whether the Company utilized its \$1.35 billion revolver in
22 July 2022 for the unexpected rise in natural gas prices. The Company responded
23 no and secured a separate \$1 billion term loan without appearing to even consider

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 their in-place \$1.35 billion ST-debt capacity. Staff has provided the Company
2 responses as exhibits, labeled Exhibit S-4, Schedule D-6, pages 1 and 2. The
3 Commission should request an explanation from the Company as to the viability
4 of its almost \$2 billion in ST-debt capacity if only a very small portion of the
5 facilities are being used or if most of the facilities are not being used at all. The
6 Commission should determine if the total costs included in the Company's current
7 ST-debt cost rate is appropriate and reasonable for ratepayers to finance.

8 Q. Please explain Staff's concerns with the Company's treatment of its Renewables
9 Liability balance.

10 A. Staff asked a series of audit requests concerning the renewables liability balance
11 in general and the \$78.5 million liability balance the Company identified in this
12 case. I provide the Company's answers as part of my exhibits, Exhibit S-4,
13 Schedule D-6, p 3-5. Initially, the renewables liability balance was made up of
14 money collected from ratepayers through a surcharge to fund the Company's
15 renewables energy portfolio. However, Staff's primary concern is that the excess
16 funds are then being charged back to ratepayers as a form of short-term debt,
17 which is money already over-collected from them. For instance, in general terms,
18 it is my understanding that during the reconciliation process, the Company
19 calculates the difference between its surcharge revenues collected for its
20 renewables program and the costs associated with the program. If the Company
21 collects more in surcharge revenue than the cost of the program, then the
22 Company has increased its liability, which in turn grows its renewables liability
23 balance. The Company then turns around and bills back to ratepayers the

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 increased renewables liability balance from the excess revenue it already collected
2 from them. That notion in and of itself appears to be a win-win for the Company
3 and unfair to ratepayers. Therefore, Staff recommends that the Commission
4 eliminate the renewables liability balance from being charged back to ratepayers
5 as a portion of short-term debt. However, if the Commission prefers a more
6 measured approach, Staff recommends the Commission instruct the Company
7 provide a more thorough explanation of its renewables liability ST-debt process.

8 Q. Please explain the difference in Staff's and the Company's return on equity.

9 A. Staff provides a thorough discussion of its return on equity analysis and
10 recommendation and the difference between Staff's and the Company's cost of
11 equity determination in the return on equity analysis below.

12 Q. Yes. Did Staff provide a forecast of inflation rates in this case?

13 A. Yes. Staff recommended an average inflation rate of 2.83% for 2024 and 2.33%
14 for 2025 using June - August 2024 estimates from S&P Global Market
15 Intelligence, the Federal Reserve and the Congressional Budget Office. Staff's
16 inflation rate forecasts are outlined on Exhibit S-4, Schedule D-3, page 2 of 2.

17

18 **Part II. Return on Equity Analysis**

19 Q. In establishing a legal basis for Staff's return on equity analysis in this rate case,
20 what considerations did Staff take into account?

21 A. Traditionally, when considering a return on equity recommendation for a utility
22 company, Staff refers to the legal guidelines set forth in the landmark cases of

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 *Hope and Bluefield. In Bluefield Water Works and Improvement Co. vs. Public*
2 *Service Commission*, 262 U.S. 679, 692-693 (1923) case, the Court stated:

3 “A public utility is entitled to such rates as will permit it to earn a return on the
4 value of the property which it employs for the convenience of the public equal to
5 that generally being made at the same time and in the same part of the country on
6 investments in other business undertakings which are attended by corresponding
7 risks and uncertainties; but has no constitutional right to profits such as are
8 realized or anticipated in highly profitable enterprises or speculative ventures.”

9
10 Furthermore, in 1944 in *Federal Power Commission vs. Hope Natural Gas*
11 *Company*, 320 U.S. 591, 603 (1944) case, the Court stated:

12 “From the investor or company point of view, it is important that there
13 be enough revenue not only for operating expenses but also for the
14 capital costs of the business. These include service on the debt and
15 dividends on the stock. By that standard the return to the equity owner
16 should be commensurate with returns on investment in other
17 enterprises having corresponding risks. That return, moreover, should
18 be sufficient to assure confidence in the financial integrity of the
19 enterprise, so as to maintain its credit and to attract capital.”

20 The U.S. Supreme Court established an “end result” doctrine which surmised that
21 how a capital structure and rate of return was determined was not so important as
22 long as the end result was appropriate and reasonable for the case at hand. No
23 one methodology provides an exact measure of a fair rate of return on equity, but
24 some methods provide good estimates. The Discounted Cash Flow method
25 (DCF) and the Capital Asset Pricing Model (CAPM) are the primary models most
26 utility financial analysts use in rate cases to determine a fair and reasonable cost
27 of equity for regulated utility companies. I employ those methods in this rate case
28 along with a bond yield + risk premium method and a comparison of recent
29 electric ROE determinations from other state jurisdictions.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 Q. Please explain the development of the electric utility proxy group you used to aid
2 in the development of CE-Electric's cost of equity recommendation.

3 A. I primarily looked at six criteria in selecting a proxy group of comparable utility
4 companies used in my ROE analysis: 1) each utility had to have net plant greater
5 than \$4.0 billion but less than \$35.0 billion to better compare in size and footprint
6 to Consumers Energy's electric division; 2) each company had to derive no less
7 than 50% or more of its revenues from regulated electric distribution service; 3)
8 each utility had to have an investment grade rating within three notches from that
9 of Consumers Energy from the two primary rating agencies, S&P and Moody's;
10 4) each company had to currently be paying dividends to shareholders; 5) each
11 utility had to be followed by 2 or more International Business Estimating System
12 (I/B/E/S) analysts; and 6) each company is not currently involved in a merger or
13 major corporate buyout or sell-off that could significantly impact the company's
14 stock price. With this selection criteria, I came up with a list of 8 electric utility
15 companies, which are outlined in Schedule D-5, page 2 of 14.

16 Q. Is there difference in Staff's proxy group and the Company's proxy group?

17 A. Yes. The Company's proxy group consists of 12 utilities. The difference is in a
18 few companies I excluded from my proxy group that the Company included in its
19 group. I excluded Entergy Corp., FirstEnergy Corp., PPL Corporation and the
20 Xcel Energy Company that the Company included in its proxy group. Entergy,
21 FirstEnergy and the Xcel Energy had average net plant balances over \$35 billion,
22 which exceeded the upper limit for inclusion into my proxy. The PPL
23 Corporation has a beta of 1.15, well above my proxy group's average beta of 0.94,

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 and well above a reasonable beta for a regulated utility. Thus, the PPL company
2 was excluded. Nonetheless, Staff and the Company's proxy groups align in
3 general and is not the primary reason for our differing ROE recommendations.

4 Q. Please provide a brief description of your Schedule D-5, pages 2 and 4.

5 A. Schedule D-5, page 2, provides some business statistics on Consumers Energy
6 and the proxy group utilities used in this rate case. Columns (e) and (f) describe
7 the credit ratings assigned to each utility by the credit rating agencies S&P and
8 Moody's. The proxy group's average S&P credit rating is (A-/BBB+) and for
9 Moody's is (Baa1). Both ratings are one to two notches below Consumers
10 Energy's credit rating of (A1), and thus, Consumers Energy is considered a less
11 risky company than the proxy group. Columns (j), (k) and (L) highlight the latest
12 allowed return on equity for each electric utility or electric utility subsidiary in the
13 proxy group, along with the authorized equity layer according to S&P Global
14 Market Intelligence. The average authorized ROE is 9.45% for the electric proxy
15 group. That is considerably less than Consumers current 9.90% authorized ROE,
16 even though Consumers has a higher credit rating than the proxy group.

17 Schedule D-5, page 4 describes the return on common equity for the
18 proxy group and CE-Electric from 2019 through 2023. The average return on
19 equity over the 5-year period for the proxy group was 10.12% and for CE-Electric
20 was 9.09%. Over the past five years CE-Electric has not earned its authorized
21 ROE, earning on average 81 basis points below the Company's authorized 9.90%
22 ROE. That is perplexing given that Consumers earnings grew steadily from 2019
23 through 2022 before subsiding a bit in 2023. The Company provided a response

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

to Staff's audit request for Company earnings over the last five years and the percent that net income either rose or fell from the previous year. The Company provided the following information:

<u>Year</u>	<u>Net Income (millions)</u>	<u>(%) Increase Over Previous Year</u>
2023	\$867	-8.3%
2022	\$945	8.9%
2021	\$868	6.4%
2020	\$816	9.8%
2019	\$743	5.4%
2018	\$705	

Thus, according to the chart, corporate earnings grew steadily for years, with Consumers Energy's electric division being by far the largest segment of the Company's two regulated utility divisions. CE-Electric not earning its allowed ROE for the past five years seems contradictory based on the steady increase in corporate earnings as noted in the chart above.

Discounted Cash Flow Model (DCF) Analysis

Q. Please provide a brief explanation of the DCF and how it is used in this analysis.

A. The DCF method has been a widely used approach for estimating equity investors return demand since the 1960s. It was introduced after the 1929 stock market crash by I. Fisher in 1930 and expanded upon by J.B. Williams in 1938 before being elaborated on by M.J. Gordon and E. Shapiro. The approach derives its basis by surmising how investors evaluate stocks for potential investment. The formula assesses that investors value securities by evaluating the present value of expected future cash flows attributed to those securities. The model suggests that

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 expected future cash flows include dividends, the projected market value of the
2 security at liquidation, and the discount or capitalization rate investors apply to
3 the future cash flows. The model evaluates the current price of a stock with the
4 assumption that the growth of the stock will be constant throughout its life and
5 that its growth will be less than the cost of its equity. The formula is

6 $P = D_1 / k - g$ where:

7 P = Price per share

8 D_1 = Dividend per Share Expected

9 k = Cost of Equity

10 g = Expected Growth Rate

11 Rearranging the above formula into the basic DCF formula is the mathematical
12 equation that states that the cost of equity is equal to the security's dividend yield
13 plus a projected future growth rate of the stock. The basic DCF formula is

14 $K = D_1/P + g$ where:

15 K = Cost of Equity

16 D_1 = Expected Quarterly Dividend Rate Annualized

17 P = Market Price of the Security

18 $(D_1/P = \text{Dividend Yield})$

19 g = Expected Growth Rate

20 Q. Please explain the computation of your DCF estimate.

21 A. I outline my DCF analysis on Schedule D-5, page 5 of 14. I used June 1, 2024
22 through August 1, 2024 closing stock prices and averaged the three-month prices.
23 I then annualized current quarterly paid dividends to calculate dividend yields for
24 the proxy group. The dividend yield is modified by the semi-annual

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 compounding method based on the formula $DCF = (D_1/P) * [1 + 0.5g] + g$. The
2 semi-annual compounding model is the preferred model to use when performing a
3 DCF analysis on a group of comparison companies.²⁰ This is also the preferred
4 method used by Federal Energy Regulatory Commission (FERC). The ratemaking
5 dividend yield is highlighted in column (j).

6 The bottom section of the page highlights the projected growth rates in
7 the proxy group's earnings for a 3 to 5-year period. The growth rate in earnings
8 were gathered from widely used and well-known sources such as the Yahoo
9 Finance, Value Line and Zacks. The average growth rate estimates ranged from a
10 low of 5.75% to a high of 9.25%.

11 Q. What DCF cost of equity estimate did you arrive at?

12 A. I arrived at an average DCF cost of equity estimate of 10.76%. The DCF cost of
13 equity was determined using the constant model, which adds the average dividend
14 yield to the expected growth rate noted by lines [A] +[B].

15 Q. Did Consumers Energy provide a DCF cost of equity estimate?

16 A. Yes. Company witness Todd Wehner provides a DCF cost of equity estimate of
17 9.85% using the Company's twelve-utility proxy group and I/B/E/S dividend
18 growth rate estimates.

19 Q. Do you agree with the Company's traditional DCF analysis?

²⁰ Parcell, D.C., *The Cost of Capital – A Practitioner's Guide* 10-13 (1997 ed).

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 A. I agree with the Company's DCF ROE estimate but disagree with parts of the
2 Company's analysis. I disagree with Mr. Wehner's use of dividend growth rates
3 only in the DCF formula.

4 Q. Please explain your disagreement with the use of dividend growth rates.

5 A. The use of dividend per share growth metrics is unwarranted. Staff uses the
6 growth in earnings per share metric, which is the basis and foundation for the
7 dividends a company can pay out, and is the preferred metric used by Staff and
8 the other intervenors. The Company has used earnings growth estimates in the
9 past as earning growth metrics are routinely tracked by analysts used by the
10 Company, Staff and other intervenors. However, dividend growth metrics are not
11 as readily tracked by analysts. The Company notes that three of its proxy group
12 companies did not provide meaningful dividend growth rate estimates and thus,
13 the Company provided no ROE estimate for those companies.²¹ Financial
14 literature further expounds upon the rationale for using earnings growth estimates
15 in the DCF analysis. Dr. Morin, in his widely referenced *New Regulatory*
16 *Finance* book discusses the appropriateness of using earnings growth instead of
17 dividend growth forecasts.²²

18 Q. Should flotation costs be considered in any of the cost of equity models for the
19 Company?

20 A. No. The inclusion of flotation costs as a basis point increase to any of the
21 Company's cost of equity models should be rejected. Consumers Energy does not

²¹ See T. Wehner – Exhibit No. A-14, Schedule D-5, page 5 of 12 - column (k) and Note at bottom of page

²² Dr. (Roger) Morin, *New Regulatory Finance*, p 302-303.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 incur flotation costs because as a subsidiary of its parent company CMS Energy, it
2 does not issue common stock. Since it does not issue common stock, it does not
3 incur flotation costs. Thus, flotation cost enhancement to any of the Company's
4 ROE estimates should be rejected.

5

6 **Capital Asset Pricing Model (CAPM) Analysis**

7 Q. Please discuss Staff's Historical CAPM method.

8 A. The CAPM model was derived from the study and analysis of economists Sharpe,
9 Lintner and Treynor and in its simplified form is expressed by the equation:

10
$$E(R) = R_f + \beta * [E(R_m) - R_f]$$

11 Where: $E(R)$ = Expected rate of return on a risky security

12 R_f = Risk free rate of return

13 $E(R_m)$ = Expected market rate of return

14 β = The systematic risk or beta of a security

15 In theory the CAPM model differentiates between two types of risk: diversifiable
16 and non-diversifiable risk. The theory suggests that an investor's required return
17 is based on the investor's exposure to risk that is systemic in the market, i.e. non-
18 diversifiable risk. Risk that is unique to a particular security is called firm
19 specific risk. One of CAPM's primary assumptions is that investors are fully
20 invested in the market, i.e. invested in a portfolio of stocks, and thus eliminate or
21 substantially reduce firm specific risk. Hence, the model infers that investors risk
22 exposure is primarily composed of market risk and since this is risk that cannot be
23 diversified away, it should be the basis for investor compensation. The beta

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 coefficient measures the volatility of a security's stock price as it relates to
2 changes or movements in the market and represents the risk factor.

3 Q. What equity risk premium estimates did you use in your CAPM analysis?

4 A. I used three equity risk premiums in my analysis, an historical risk premium and
5 two projected risk premiums. I will discuss the projected risk premiums later in
6 my testimony. In evaluating the historical risk premium, I reviewed the Kroll
7 (formerly Ibbotson Associates) study entitled Stocks, Bonds, Bills and Inflation:
8 The 2023 Yearbook. The study provides historical values for market return
9 indices used in the estimation of risk premiums and common equity costs. The
10 study was formally updated annually.²³ Taking the difference between the
11 average stock return and government bond return over the period indicated a
12 6.80% market risk premium (MRP). The historical MRP derivation is shown on
13 Exhibit S-4, Schedule D-5, page 6 of 14.

14 Q. What risk free rate (R_f) did you use in your CAPM analysis?

15 A. Government securities are commonly considered to be risk-free. The risk-free
16 rate used in my CAPM analysis is the yield associated with a long-term U.S.
17 government Treasury bond. I reviewed S&P Global Market Base Forecast for 30-
18 year Treasury bond yield forecasts for 2024, 2025 and 2026, and average (Dec 31
19 – Dec 31) forecasts over the same period from Econforecasting.com.. I used 5%

²³ Kroll announced in January 2024 that future editions of the SBBI Yearbook will no longer be available. Thus, there will be no 2024 edition of the SBBI Yearbook. Going forward, Staff will use a combination of the Kroll SBBI yearbook for data up to 2022, data from Damodaran Online (NYU) website for future S&P 500 market data, and long-term government bond data from the Federal Reserve.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 weight to the 2024 and 2026 estimates and 90% weight to the 2025 estimate to
2 establish an average risk-free rate of 3.65%.

3 Q. What beta did you use in your analysis and its source?

4 A. I used the electric group's beta derived from Value Line. By definition, the
5 market beta is 1. The Value Line beta is a forward-looking beta, which measures
6 a 60-month average raw beta on a weekly basis and adjusts that raw beta by a
7 convergence factor towards the market beta 1. Stocks with betas less than 1 are
8 considered less volatile and thus less risky than stocks with betas greater than 1.

9 Q. What cost of equity estimate did you arrive at using the historical CAPM method?

10 A. Combining the average risk-free rate of 3.65% with the calculated historical risk
11 premium of 6.80% and the electric group's beta in the CAPM formula
12 $[R_f + \beta \cdot (MRP)]$, I computed an average CAPM cost of equity of 10.03% for the
13 historical period.

14 Q. Did you also provide a projected CAPM analysis?

15 A. Yes. To account for the forward-looking nature of the CAPM, primarily with
16 respect to overall market return and equity risk premium derivation, I also
17 conducted a projected CAPM analysis using two forward-looking market risk
18 premium estimates provided by Consumers Energy.

19 Q. Please explain the development of your projected CAPM analysis.

20 A. In Consumers last electric rate case, Case No. U-21389, Company witness T.
21 Wehner, provided a projected market risk premium (MRP) of 6.53% derived from
22 a DCF analysis of the S&P 500 (as shown in Case No. U-21389 -Exhibit No. A-
23 14, Schedule D-5, p 10 of 12.) I used the Company's projected 6.53% MRP in

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 one of my projected CAPM analysis. I also used the Company's projected 8.48%
2 MRP offered in this case (as shown in Case No. U-21585 – Exhibit No. A-14,
3 Schedule D-5, p 2 of 12.).

4 Q. Have you used the Company's projected MRP in past rate cases?

5 A. Yes. I recently used the Company's projected MRP in Consumers electric rate
6 case, Case No. U-21389. I generally agreed with the Company's derivation of its
7 projected MRP with respect to its DCF analysis of the S&P 500. However, I have
8 reservations about the derivation of the Company's projected MRP in this case.

9 Q. What are your reservations about the Company's projected MRP in this case?

10 A. Staff notes that the Company's previous projected MRP derivation of 6.53% in
11 Case No. U-21389 was taken from its Bloomberg source on Jan 2, 2023. The
12 Company asserts that it projected an MRP of 8.48% from the same source as of
13 April 12, 2024 in this case. Staff believes the Company's MRP is overblown. In
14 Consumers last gas case, Case No. U-21490, the Company's projected an MRP of
15 9.81% derived from the same source on October 5, 2023. Staff asked in an audit
16 request why the MRP numbers changed so dramatically (from 6.53% in Jan. 2023
17 to 9.81% in Oct. 2023) in a short 10-month timeframe. The Company was
18 reluctant to answer, and Staff had to ask a second time for a more detailed
19 response. The Company finally provided a tepid response indicating a potential
20 pause in rate hikes from the Fed and some supposed clearing of supply chain
21 constraints as the rationale for the dramatic increase in analyst's earnings

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 estimates for the S&P 500 market.²⁴ However, the Company's response was half-
2 hearted and unpersuasive in that case as it is in this case. The Company's 8.48%
3 MRP used in this CAPM is excessive and should be rejected by the Commission.

4 Q. What projected CAPM cost of equity estimates did you arrive at?

5 A. Combining the average risk-free rate of 3.65% with the projected risk premiums
6 of 6.53% and 8.48% provided by the Company, and the electric group's betas, I
7 computed two average projected CAPM ROE estimates of 9.77% and 11.60%.

8 Q. Are the projected CAPM ROE estimates you arrived at reasonable in this case?

9 A. Not entirely, one is reasonable, and the other is not. Staff accepts the CAPM
10 ROE from the Company's projected MRP of 6.53% used in its U-21389 rate case.
11 That MRP provides for a more rational ROE that is not outside the realm of
12 reasonableness and appears to have outside support.²⁵ The Company's 8.48%
13 projected MRP submitted in this case, and the ensuing 11.60% CAPM ROE
14 estimate, is overblown and should be rejected. The Company's previous
15 projected MRP produced a CAPM ROE estimate of 9.77% and a year later, the
16 Company's MRP produces a CAPM estimate of 11.60% in this case. The roughly
17 two percent increase in a year is difficult to comprehend barring a very significant
18 change in the underlying financial conditions of the U.S. economy. The
19 Company's testimony does not speak to this level of market volatility. Company
20 witness Wehner, on page 26 of his direct testimony, describes several areas of

²⁴See Case No. U-21490 - Staff Exhibit S-4, Schedule D-6, p 3 of 3.

²⁵The 6.53% MRP coincidentally coincides with the average MRP of the Fama-French Model described in the Company's Exhibits, Exhibit No. A-176 (TAW-14), p 18 of 35. This is part of the abstract "Cost of Equity for Energy Utilities: Beyond the CAPM" provided by the Company in Exhibit No. A-176, p 2 of 35.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 market uncertainty that the Company believes will be significant and impact the
2 U.S. economy during the upcoming test year. Thus, Staff wanted to show the
3 contrast in CAPM results produced by the two different projected MRP estimates.
4 The overblown MRP submitted by the Company in this case produces over-
5 inflated CAPM estimates that should be given no weight. The Company's
6 previous MRP in its electric case No. U-21389 produces a much more practical
7 CAPM estimate that should be the only estimate given weight.

8 Q. Did the Company provide a CAPM analysis and cost of equity estimate?

9 A. Yes. The Company provided two analyses, a projected CAPM analysis, and a
10 projected empirical CAPM or ECAPM analysis.

11 Q. Please explain how the Company derived its CAPM results.

12 A. The Company provided a traditional CAPM analysis that used Value Line betas, a
13 30-year risk-free rate and a projected market risk premium. The Company's
14 projected CAPM analysis produced an average ROE estimate of 12.51%. The
15 Company's ECAPM approach modifies the traditional CAPM approach with the
16 inclusion of an "alpha" adjustment that purports to better align low beta
17 companies with observed returns in the market.²⁶ The Company uses 1.5% for its
18 alpha factor. The Company calculated an average ECAPM ROE of 12.60%.

19 Q. Do you agree with the Company's Projected CAPM and ECAPM analyses?

20 A. No. As Staff noted earlier, the Company uses an overblown and unreliable S&P
21 500 market risk premium estimate in its analyses that produces overinflated and

²⁶ *Id.* at 48.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 wholly unreasonable CAPM ROE estimates. The Commission should give no
2 weight to the Company's projected S&P 500 MRP estimate used in this case and
3 rely on the projected MRP estimate used in the Company's last electric case No.
4 U-21389.

5 Q. Please explain Staff's disagreement with the Company's ECAPM approach.

6 A. Staff disagrees with the use of ECAPM approach in rate cases in general. The
7 ECAPM was established based on the results of the CAPM using raw betas and
8 short-term debt metrics. However, the Company's ECAPM analysis uses Value
9 Line adjusted betas and long-term debt estimates. This change in inputs renders
10 the need for the ECAPM adjustment moot. Staff notes that Value Line modifies
11 its beta using the "Blume" adjustment that adjusts beta to account for the
12 tendency to converge toward the market beta 1.00. Value Line adjusts its beta by
13 using the equation $\beta_{\text{adjusted}} = 0.34 + 0.66 \beta_{\text{raw}}$. To illustrate this difference in a
14 CAPM analysis, Staff provides a sample analysis below.

15 Example 1.

16 Value Line Beta (β_{adjusted}) = 0.70

17
$$\beta_{\text{adjusted}} = 0.34 + 0.66 \beta_{\text{raw}}$$

18
$$0.66 \beta_{\text{raw}} = \beta_{\text{adjusted}} - 0.34$$

19
$$\beta_{\text{raw}} = 0.36 / 0.66 = 0.54$$

20
21 Sample Risk-free rate (R_f) = 2.5%

22 Sample Market Risk Premium (MRP) 7.0%

23
24 CAPM using adjusted Value Line beta

25
$$K = R_f + \beta_{\text{adjusted}} \times \text{MRP}$$

26
$$K = 2.5\% + (0.70) \times (7.0\%) = \underline{\underline{7.40\%}}$$

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

$$\begin{aligned} &\text{ECAPM using raw beta where } X = 0.34 \\ &K = R_f + X \times \text{MRP} + (1 - X)(\beta_{\text{raw}} \times \text{MRP}) \\ &K = 2.5\% + 0.34 \times (7.0\%) + (1 - 0.34) \times (0.54 \times 7.0\%) \\ &K = 2.5\% + 2.4\% + 2.5\% = \quad \underline{\underline{7.40\%}} \end{aligned}$$

From the equation above, you can see that using adjusted betas in the regular CAPM equation produces the same results as using raw betas in the ECAPM analysis. Therefore, using adjusted betas in the ECAPM analysis is tantamount to double counting the beta and improperly inflating the ROE estimate. This supports Staff's contention that Value Line betas are improper for use in the ECAPM analysis. The ALJ also agreed with this beta concern in the PFD of the Company's electric rate case in Case No. U-17735.²⁷ Thus, Staff's ratemaking CAPM analysis, with its use of long-term risk-free rates and adjusted betas, renders the ECAPM adjustment unnecessary. The Commission has not considered or opined upon the merits of the ECAPM approach or its ROE estimate in the past and should not consider the approach in this case as well.

Bond Yield + Risk Premium Analysis

Q. Please outline your bond yield + risk premium (BYRP) analysis.

A. My BYRP approach incorporates the spread from historical electric utility realized stock returns and historical composite utility bond yields and adds this spread to current long-term utility bond yields to obtain an investor's current

²⁷ Specifically, the ALJ said, "In addition, it seems that Mr. Rao incorrectly applied an 'adjusted beta' when performing his ECAPM analysis instead of using a 'raw beta,' thus causing him to effectively 'double-count the adjustment to the return on equity estimate.' As a result...those analyses appear to have produced results that were higher than they should have been." MPSC Case No. U-17735, PFD, p 86.

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 reasonable required rate of return. I also incorporate an historical Treasury Bond
2 analysis to estimate an additional BYRP estimate.

3 Q. Please explain the derivation of your BYRP approach.

4 A. I reviewed the Electric Utility Realized Market Return Average from 1932
5 through 2023 compared with the A-Rated Public Utility Bond Yield Average over
6 the same period. Mergent Public Utility Manual & Bond Record provided
7 complete market return and bond yield data until 2002. Therefore, in order to
8 obtain utility market data for 2003 to 2023, I used data from the Dow Jones
9 Utilities index as shown on Exhibit No. S-4, Schedule D-5, page 10 of 14.

10 The average electric utility market return over that period was 10.79%
11 and the average A-rated composite utility bond yield was 6.28% over the same
12 period. Subtracting the bond yield from the market return yielded an historical
13 spread of 4.51%. In addition, an historical Treasury Bond spread of 5.04% was
14 calculated as shown on Schedule D-5, page 12 of 14.

15 Q. What bond data did you use in your risk premium calculation?

16 A. I use utility bond yield data for A-rated and BBB-rated utility bonds. I reviewed
17 Value Line bond data from May 2024 through August 30, 2024. The average
18 yield for A-rated bonds over the period was 5.43% and for BBB-rated bonds was
19 5.76%. Adding these current bond yields to the historical market risk premium of
20 4.51% produced ROE estimates of 9.94% and 10.27% respectively. Additionally,
21 the historical Treasury Bond spread of 5.04% was added to the projected long-
22 term T-bond yield of 3.65% to produce an ROE estimate of 8.69%.

23 Q. Did the Company provide a Risk Premium (RP) analysis and ROE estimate?

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 A. Yes. The Company provided an RP analysis that produced an average ROE
2 estimate of 10.62%.

3 Q. Do you agree with the Company's RP analysis and ROE result?

4 A. Not entirely. The Company methodology for its RP analysis is not objectionable.
5 However, the Company's A-rated through BBB-rated bond yield results appears
6 inflated. As a comparison, my average A-rated utility bond yield data used in my
7 BYRP analysis was 5.43% and the average BBB-rated utility bond yield was
8 5.76%. My data was derived from Value Line actual bond yields. The
9 Company's A-rated and BBB-rated utility bond yields used in its RP analysis is
10 5.87% through 6.83% respectively. Hence, the Company's numbers are
11 approximately 45 – 100 basis points higher than Staff's bond yield data. Though
12 Staff does not object to the Company's RP analysis, the Company's over-inflated
13 datapoints result in an unreasonable ROE. The Commission should give limited
14 weight to the Company's risk premium analysis.

15 Q. Did you review any other study in your return on equity analysis?

16 A. Yes. As noted on Schedule D-5, page 13 of 14, I reviewed the authorized rate of
17 return decisions for electric utilities rendered by other state commissions across
18 the country for the years 2021 through June 2024. The average country-wide
19 authorized ROE for 2021 was 9.45%, for 2022 was 9.38%, for 2023 was 9.60%,
20 and for the first six months of 2024 was 9.68%. That equates to a 3.5-year
21 average of around 9.55%, which is well below Staff's ROE 9.85%
22 recommendation. More noticeably, there were 21 rate cases adjudicated up to
23 June 2024, and the average ROE authorized in those cases was 9.68%. Thus,

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

Staff's 9.85% ROE recommendation in this case is over 15 basis points higher than the June 2024 average and suggests that Staff's ROE recommendation is not only fair but can be viewed as favorable.

Q. Based on your ROE analysis, what is Staff's recommended cost of common equity for Consumers Energy's electric division in this rate case?

A. Below is a summary of Staff's cost of equity estimates and Staff's recommended ROE range and ratemaking ROE based on Staff's analysis of its cost of equity models, review of other ROE authorizations across the nation and prudence outlined by the Commission:

Staff Cost of Equity Recommendation

<u>ROE Analysis</u>	<u>ROE</u>
Traditional DCF:	10.76%
Historical CAPM:	10.03%
Projected CAPM – Using Consumers MRP in Case No. U-21389:	9.77%
Projected CAPM – Using Consumers MRP in Case No. U-21484:	11.60%
Historical Bond Yield + Risk Premium – A-Rated Utilities:	9.94%
Historical Bond Yield + Risk Premium – BBB-Rated Utilities:	10.27%
Historical Treasury Bond + Projected LT- T. Bond:	8.69%
Avg. Electric Utility Authorized ROE Decision Across the U.S.- June 2024	9.68%
Avg. Electric Utility Authorized ROE Decisions Across the U.S -2023:	9.60%
Avg. Electric Utility Authorized ROE Decisions Across the U.S -2022:	9.48%
Avg. Electric Utility Authorized ROE Decisions Across the U.S - 2021:	9.45%
Recommended Cost of Equity Range:	9.35% - 10.35%
ROE recommended and used in Overall Cost of Capital	<u>9.85%</u>

Based on the results above, it is Staff's judgment that a cost of equity recommendation for Consumers Energy Electric division falls within the range of 9.35% - 10.35%, as highlighted in Exhibit S-4, Schedule D-5, page 14 of 14. Considering the Company's current authorized ROE of 9.90% and the

DIRECT TESTIMONY OF KIRK D. MEGGINSON
CASE NUMBER U-21585
PART II

1 Commission's request for ROE prudence, it is Staff's judgement that its ROE
2 recommendation for Consumers is 9.85%.

3 Q. Does Staff's recommended ROE align with Consumers Energy's recommendation
4 in this rate case?

5 A. No. Company witness Wehner supports a cost of equity of 10.25%. The
6 Commission should reject this recommendation for several reasons. First, the
7 ROE request is 35 basis points higher than the Company's currently authorized
8 9.90% ROE, which does not coincide with the Commission's request for
9 prudence. The request also does not coincide with the Commission's approval of
10 the Company's Distribution Investment Cost Recovery Mechanism, along with a
11 surcharge to pay for the program, that all but ensure recovery of the costs
12 associated with that program and lowers the Company's overall business and
13 financial risk. That lower risk also calls for a more reasonable and prudent ROE
14 along the lines of Staff's recommendation.

15 Thus, the Company's approved risk-reduction programs, along with its
16 practice of filing of a new rate case no more than 12 months after its prior rate
17 case, borders on a 100% risk-free investment for the Company. This tremendous
18 risk reduction calls for an ROE drastically less than the Company's 10.25%
19 request, which the Commission should reject outright. Staff's fairer and more
20 equitable 9.85% ROE is the most suitable recommendation that properly balances
21 the needs of the Company along with fairness to its ratepayers.

22 Q. Does this conclude your testimony?

23 A. Yes.

Case No. U-21585

September 27, 2024

QUALIFICATIONS OF ROBERT F. NICHOLS II, CPA
CASE NUMBER U-21585
PART I

1 Q. Please state your name and business address.

2 A. My name is Robert F. Nichols II, and my business address is 7109 West Saginaw
3 Highway, Lansing, MI 48917.

4 Q. By whom are you employed and in what capacity?

5 A. I am employed by the Michigan Public Service Commission (Commission or
6 MPSC) as the Manager of the Revenue Requirements Section of the Regulated
7 Energy Division.

8 Q. How long have you been employed by the MPSC and what are your duties?

9 A. I have been employed by the MPSC since November of 2011. As Manager of the
10 Revenue Requirements Section, I am primarily responsible for the planning and
11 direction of electric and gas rate case audits and presentations, as well as cases
12 involving accounting standards and requests for accounting authority. From 2011
13 through March 2016, as an Auditor within the Revenue Requirements Section, my
14 responsibilities included auditing, analyzing, and making recommendations
15 regarding utility revenues, expenses, and rate base.

16 Q. Please describe your educational background.

17 A. I graduated from Davenport University, with highest honors, in 2009 with a
18 Bachelor of Business Administration degree in Accounting Information
19 Management. I attended a regulation and ratemaking conference hosted by the
20 Michigan State University Institute of Public Utilities (MSU IPU) in May of
21 2012. In August of 2012, I attended the National Association of Regulatory
22 Utility Commissioners (NARUC) annual two-week Regulatory Studies Program
23 held at Michigan State University. Each August from 2013 through 2016 and in

QUALIFICATIONS OF ROBERT F. NICHOLS II, CPA
CASE NUMBER U-21585
PART I

1 2019, I attended the Annual Regulatory Studies Program hosted by MSU IPU. I
2 also attended a one-week Advanced Regulatory Studies Program in fall of 2013,
3 2014, and 2016, hosted by MSU IPU.

4 Q. Please describe your professional background.

5 A. Prior to coming to the MPSC, from 2000 to 2011, I was employed by Genesee
6 Cut Stone & Marble Company. My duties there included sales, drafting, and
7 estimating.

8 Q. Do you have any professional licenses?

9 A. Yes. I am a Certified Public Accountant, licensed by the State of Michigan.

10 Q. Have you prepared testimony or assisted in any other proceedings?

11 A. I have assisted or filed testimony in the following cases:

DIRECT TESTIMONY OF ROBERT F. NICHOLS II, CPA
CASE NUMBER U-21585
PART II

1 Q. What is the purpose of your testimony?

2 A. The purpose of my testimony is to present the MPSC Staff's (Staff) projected
3 revenue deficiency, projected net operating income, and Campbell revenue
4 requirement adjustment for Consumers Energy Company (Consumers Energy or
5 the Company).

6 Q. Are you sponsoring any exhibits?

7 A. Yes. I am sponsoring the following exhibits:

8 Exhibits:

9 S-1 Schedule A-1: Revenue Deficiency (Sufficiency)

10 S-1 Schedule A-2: Campbell Revenue Requirement Adjustment

11 S-3 Schedule C-1: Adjusted Net Operating Income

12 S-3 Schedule C-1.1: Development of Adjusted Net Operating
13 Income

14 S-3 Schedule C-12: Pro-Forma Interest Adjustment

15 S-3 Schedule C-13: Interest Synchronization Adjustment

16 **REVENUE DEFICIENCY:**

17 Q. Referring to Exhibit S-1, Schedule A-1, what is Staff's projected revenue
18 deficiency?

19 A. Staff projects a total company revenue deficiency of \$148,284,000, a revenue
20 requirement decrease of \$154,294,000 from the Company's originally filed total
21 company revenue deficiency of \$302,579,000. (Exhibit S-1, Schedule A-1;
22 Exhibit A-11 (JCA-27), Schedule A-1.) The main factors driving Staff's overall
23 adjustment are Staff's lower rate base, its higher net operating income, and its

DIRECT TESTIMONY OF ROBERT F. NICHOLS II, CPA
CASE NUMBER U-21585
PART II

1 lower required rate of return. In addition to my testimony, other Staff witnesses
2 provide testimony and supporting exhibits regarding the adjustments to the
3 Company's revenue deficiency.

4 **CAMPBELL REVENUE REQUIREMENT ADJUSTMENT:**

5 Q. Referring to Exhibit S-1, Schedule A-2, what is Staff's Campbell revenue
6 requirement adjustment?

7 A. Staff's Campbell revenue requirement adjustment is (\$7,708,000), which is
8 (\$1,113,000) greater than the Company's (\$6,596,000) adjustment. (Exhibit S-1,
9 Schedule A-2; Exhibit A-30 (JCA-65).) Staff is projecting a larger Campbell
10 revenue requirement adjustment because Staff has applied its proposed cost of
11 capital from Exhibit S-4, Schedule D1 with a 9% return on equity (ROE) applied
12 for Campbell per the Order in MPSC Case No. U-21090 in lieu of the Company's
13 projection. Staff and the Company have both applied 9% ROE per the U-21090
14 Order. Staff recommends the Campbell revenue requirement adjustment should
15 be updated by the Commission to reflect its final authorized cost of capital in this
16 case, but with the ROE set at 9% per the Commission's previous Order in MPSC
17 Case No. U-21090.

18 **NET OPERATING INCOME:**

19 Q. Referring to Exhibit S-3, Schedule C-1, what is Staff's projected net operating
20 income?

21 A. Staff's projected total company net operating income is \$761,988,000, an increase
22 of \$26,746,000 from the Company's originally filed total company net operating
23 income of \$735,242,000. (Exhibit S-3, Schedule C-1; Exhibit A-13(JCA-37),

DIRECT TESTIMONY OF ROBERT F. NICHOLS II, CPA
CASE NUMBER U-21585
PART II

1 Schedule C-1.) The main factors driving Staff's overall adjustment are its
2 increase in sales revenue and its reductions in O&M expense, depreciation
3 expense, and property tax expense. Details of Staff's adjustments to net operating
4 income, including the Staff witness sponsoring and explaining the adjustment, can
5 be found on Exhibit S-3, Schedule C-1.1.

6 **INTEREST SYNCHRONIZATION:**

7 Q. Please describe Exhibit S-3, Schedule C-12.

8 A. Exhibit S-3, Schedule C-12, shows the calculation of the pro-forma interest
9 expense adjustment for the Projected Test Year and the corresponding change in
10 income tax.

11 Q. Please describe Exhibit S-3, Schedule C-13.

12 A. Exhibit S-3, Schedule C-13, shows the calculation of the tax effect of the interest
13 synchronization adjustment for the Projected Test Year.

14 **SUMMARY:**

15 Q. Please summarize Staff's recommendations.

16 A. Staff recommends a projected total company revenue deficiency of \$148,284,000,
17 a Campbell revenue requirement adjustment of (\$7,708,000) and a projected total
18 company net operating income is \$761,988,000.

19 Q. Does this conclude your testimony?

20 A. Yes.

1 Q. Please state your name and business address.

2 A. My name is Mark J. Pung. My business address is 7109 West Saginaw Highway,
3 Lansing, Michigan 48917.

4 Q. By whom are you employed and in what capacity?

5 A. I am employed by the Michigan Public Service Commission (MPSC or
6 Commission) as a Departmental Specialist in the Rates and Tariff Section of the
7 Regulated Energy Division. I serve as the section's Electric Cost of Service
8 Specialist.

9 Q. Please briefly describe your educational background.

10 A. I graduated from Michigan State University in 2004 with a Bachelor of Arts
11 degree in Supply Chain Management.

12 Q. Have you completed any other courses?

13 A. Yes, I have completed two graduate courses at Central Michigan University's
14 Lansing campus, Quantitative Applications in Administrative Decision Making
15 and Financial Management. I have also completed the Association of Edison
16 Illuminating Company's Fundamentals of Customer Load Data Analysis course,
17 the National Association of Regulatory Utility Commissioners (NARUC) Annual
18 Regulatory Studies Program held at Michigan State University, and EUCI Electric
19 Cost-of-Service Course - Essential Concepts for a Changing Industry.

20 Q. What are your current responsibilities at the MPSC?

21 A. As the Electric Cost of Service Specialist, I am responsible for developing Staff
22 electric cost of service studies, interpreting and applying laws related to electric
23 cost-of-service, and any other electric cost-of-service-related issues in cases

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 Q. What is the purpose of your testimony?

2 A. The purpose of my testimony is to present MPSC Staff's (Staff) class cost-of-
3 service study (COSS), which allocates Staff's recommended test-year revenue
4 requirements to Consumers Energy's (the Company) customer classes. I will also
5 cover the following: 1) Staff's recommended customer charges, 2) Staff's
6 capacity cost revenue requirement and SRM Capacity Charge, 3) Staff's
7 Substation Ownership Credits, and 4) Staff's surcharge revenue requirement
8 calculations and associated allocation recommendations.

9 Q. Are you sponsoring any exhibits?

10 A. Yes, I am sponsoring the following exhibits:

<u>Exhibit</u>	<u>Schedule</u>	<u>Description</u>
S-6	F1	Staff's version of the Company's Exhibit A-16 (LMC- 1), Schedule F-1, Electric Cost-of-Service Study – Projected 12-Month Period Ending Feb 28, 2026, Version 1
S-6	F1.4	Staff's Historic 2023 Customer Charge Calculation
S-6	F1.5	Staff's Capacity Related Cost and Charge Calculation
S-6	F1.6	Staff's Substation Ownership Credit
S-6	F1.7	Staff's Allocation of Surcharges
S-6	F1.8	Staff's Demand Response Revenue Requirement
S-6	F1.9	Staff's Distribution Investment Recovery Mechanism Revenue Requirement

23 Q. Were these exhibits prepared by you or under your direction?

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 A. Yes, they were.

2 Q. How has Staff modified the Company's test year COSS?

3 A. Where Staff is recommending adjustments, Staff has replaced the Company's
4 inputs with Staff's inputs so that the resulting COSS shows Staff's proposed
5 revenue requirement. This is performed by making direct adjustments to the
6 precise COSS accounts or categories which are being adjusted.

7 Q. How are the results of Staff's COSS incorporated into Staff's case?

8 A. Staff witness David Isakson utilized the results of Staff's COSS and has designed
9 rates to collect the appropriate amount of revenue for each customer class.

10

11 **Customer Charge**

12 Q. Please describe how Staff calculated its proposed customer costs for use in the
13 customer charge.

14 A. Staff's customer cost calculation can be found in Staff Exhibit S-6, Schedule
15 F1.4, Staff's Historic 2023 Customer Charge Calculation. Step 1 in calculating the
16 customer charges is to determine which costs are appropriate for inclusion in the
17 customer charge. Costs that are appropriate to include in the customer charge
18 include expenses incurred from customer installs, meters, customer accounts
19 (including uncollectible accounts), customer service and information (excluding
20 sales expenses), depreciation and amortization expense corresponding to meters,
21 services and customer installs in rate base, return on meters, services and
22 customer installs in the rate base less accumulated depreciation, and property tax
23 on meters and services in rate base. The customer charge is then calculated by

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 dividing the appropriate cost by the number of customers taking service, and then
2 dividing by twelve for the number of months in a year.

3 Q. Is this the same methodology that is currently approved for the Company by the
4 Commission?

5 A. Yes. Aside from using historical numbers in the calculation, this is the same
6 method currently approved by the Commission. The Commission did not
7 specifically address the customer charge calculation methodology nor the use of
8 historical amounts in its March 1, 2024 Order (Case No. U-21389). However,
9 neither the Company nor Staff recommended an increase to the customer charge
10 in U-21389 and the previous Commission-approved method was used in the
11 analysis to make those recommendations. This is also the exact method Staff has
12 proposed and the Commission adopted for Michigan's other large investor-owned
13 utility, DTE Electric Company.

14 Q. Why did Staff use 2023 historic cost amounts in its calculation of the customer
15 charge?

16 A. Staff used historical cost amounts in its calculation due to the uncertainty
17 regarding the test-year cost projections included in the Company's COSS.
18 Projecting test-year amounts for COSS accounts that are included in the customer
19 charge calculation based upon historical ratios will likely result in costs being
20 included in the charge that should not be and vice versa. To get a more accurate
21 projection of what the customer charge should be, a more comprehensive COSS
22 would need to be developed that includes the direct impact of proposed spending
23 in the appropriate COSS accounts.

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 Q. What was the result of Staff's residential customer charge calculation using
2 historical 2023 amounts?

3 A. Staff's calculation resulted in a residential customer charge of \$7.36 per month.

4 Q. Is the Company proposing an increase to the residential customer charge in this
5 case?

6 A. No, it is not.

7 Q. What is Staff's recommendation concerning the residential customer charge?

8 A. Based upon Staff's customer charge calculation, which results in a residential
9 customer charge of \$7.36 per month, Staff recommends that the residential
10 customer charge remain at its current amount of \$8.00 per month. Staff's
11 calculation confirms that the Company's current charge amount is appropriate and
12 having the charge remain at \$8.00 per month will provide rate stability for the
13 Company's customers.

14

15 **Distribution Plant Allocation**

16 Q. How is the Company proposing to allocate demand-related distribution plant costs
17 in this case?

18 A. The Company has proposed to use the Alternative Class Peak method that was
19 approved by the Commission in its previous electric rate case, Case No. U-21389.

20 The Alternative Class Peak method changed how classes are defined in the
21 Company's Class Peak calculation. For example, previously, Rate Schedules GS,
22 GS ROA, GSD, and GSD ROA each were considered separate classes and had
23 separate Class Peak dates and times. Now, under the Alternative Class Peak

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 method of defining classes, there is one Class Peak date and time for all 4
2 rates/provisions at that voltage level. The Company stated that this removes
3 sensitivity around how classes are grouped together with provisions that can alter
4 the allocation of costs despite not affecting who or what drives those costs.

5 Q. What is Staff's position concerning the Company's proposal to continue using its
6 Alternative Class Peak proposal to allocate demand-related distribution plant
7 costs?

8 A. Staff recommends the Commission again approve the Company's Alternative
9 Class Peak method. Staff agrees that for the purpose of allocating distribution
10 plant costs, classes should be determined mainly by voltage level. In addition, the
11 Alternative Class Peak method is currently reflected in the Company's rates.

12

13 **SRM Capacity Charge**

14 Q. Does the Company's proposed SRM Capacity Charge calculation comply with
15 Public Act 341 of 2016?

16 A. Not completely. The Company has not included a true-up mechanism in its
17 calculation. Section 6w(4) of PA 341 states:

18 The commission shall provide for a true-up mechanism that results in a
19 utility charge or credit for the difference between the projected net
20 revenues described in subsection (3) and the actual net revenues reflected
21 in the capacity charge. The true-up shall be reflected in the capacity
22 charge in the subsequent year. The methodology used to set the capacity
23 charge shall be the same methodology used in the true-up for the
24 applicable planning year.

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 This section requires a reconciliation be performed and included in the capacity
2 charge calculation each year, regardless of whether a charge was administered in
3 that year or not.

4 Q. What is Staff's recommendation concerning the Company's filed SRM Capacity
5 Charge calculation?

6 A. Staff recommends the Commission direct the Company to include a true-up
7 mechanism in compliance with Section 6w(4) of PA 341 in its SRM revenue
8 requirement calculation as part of its filing in its next general electric rate case.

9 Q. Did Staff make any modifications to the Company's proposed SRM Capacity
10 Charge calculation in this case?

11 A. No, it did not.

12 Q. What is Staff's recommended capacity revenue requirement and SRM capacity
13 charge using the Company's calculation as filed?

14 A. As shown on Staff Exhibit S-6, Schedule F1.5, Staff's net capacity revenue
15 requirement based on Staff's case is \$246.4 million, compared to the Company's
16 proposed capacity revenue requirement of \$293.6 million found on Company
17 Exhibit A-59 (LMC-2). Staff's capacity revenue requirement results in a SRM
18 capacity charge of \$72.90/MW-Day, compared to the Company's proposed SRM
19 capacity charge of \$86.88/MW-Day.

20

21 **Substation Ownership Credit**

22 Q. What method did the Company use to calculate its Substation Ownership Credits?

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 A. The Company used the same method to calculate its Substation Ownership
2 Credits as was approved by the Commission in MPSC Case No. U-18322. The
3 Company's calculation can be found on Company Exhibit A-60 (LMC-3). This
4 method takes the substation costs that have been allocated to GPD, GPTU, and
5 EIP customers on Voltage 1 and Voltage 2 and determines the cost on a per kW
6 basis for each voltage level. Lines 1 through 5 provide the different items
7 included in the substation rate base, with the total substation rate base shown on
8 line 6. The substation rate base is then multiplied by the pre-tax return rate in line
9 7 to arrive at the pre-tax return in dollars on line 8. Various expenses (lines 9
10 through 11) and revenue credits (line 12) are added to the pre-tax return to arrive
11 at the total substation revenue requirement by voltage on line 13. This total is
12 divided by the maximum demand in MW for each rate and voltage level (line 14)
13 to determine the Substation Ownership Credit on line 15.

14 Q. How did Staff calculate its Substation Ownership Credits?

15 A. Staff used the same method as the Company to calculate its Substation Ownership
16 Credits but updated for Staff's revenue requirement. Staff's Substation Ownership
17 Credits are reflected on Staff Exhibit S-6, Schedule F1.6, Line 15. Staff
18 recommends the Commission approve Staff's Substation Ownership Credits.

19
20 **Surcharge Allocations**

21 Q. Is Staff sponsoring any exhibits concerning surcharge revenue requirements and
22 allocations?

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 A. Yes, Staff Exhibit S-6, Schedule F1.7 shows Staff's version of the Company's
2 Exhibit A-61 (LMC-4), "Allocation of Surcharges." This exhibit reflects Staff's
3 allocation of the Demand Response surcharge, Electric Rate Case Deferral
4 surcharge, and the Investment Recovery Mechanism (IRM) surcharge revenue
5 requirements but updated with Staff's case. Staff Exhibit S-6, Schedule F1.8
6 shows Staff's version of the Company's Exhibit A-29 (JCA-64), "Demand
7 Response Revenue Requirement." Staff Exhibit S-6, Schedule F1.9 shows Staff's
8 version of the Company's Exhibit A-150 (HJM-1), "Distribution Investment
9 Recovery Mechanism Annual Revenue Requirement."

10 Q. How is the Company proposing to allocate the Demand Response surcharge?

11 A. The Company is proposing to continue using the production capacity allocator
12 220 (4CP 75/0/25) to allocate Demand Response costs in the COSS. The
13 Company points out that Demand Response is a capacity resource, and it should
14 be allocated in the same manner as other capacity costs.

15 Q. What is Staff's position concerning the Company's allocation of Demand
16 Response costs for the Demand Response surcharge?

17 A. Staff agrees that because Demand Response is a capacity resource, it is most
18 appropriate to allocate the costs associated with the Demand Response surcharge
19 based on allocator 220 (4CP 75/0/25).

20 Q. How is the Company proposing to allocate the Electric Rate Case Deferral
21 surcharge?

22 A. The Company has proposed to continue allocating the Electric Rate Case Deferral
23 surcharge costs, which includes the cost of certain distribution system

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 investments, to each class in proportion to their share of total distribution costs in
2 this case. This is the same method as was approved by the Commission in the
3 Company's previous cases, Case Nos. U-20697 and U-21389. Case No. U-21224
4 resulted in settlement, but this same allocation method was also used in that case.

5 Q. What is Staff's position concerning the Company's allocation of Electric Rate
6 Case Deferral Surcharge costs?

7 A. Staff agrees with the Company's allocation method and recommends it be
8 approved by the Commission. Because the costs associated with the Electric Rate
9 Case Deferral surcharge are investments in the Company's distribution system, it
10 is most appropriate to allocate these costs based upon each class's share of total
11 distribution costs.

12 Q. How is the Company proposing to allocate the Investment Recovery Mechanism
13 (IRM) surcharge?

14 A. The Company is proposing to allocate the IRM surcharge costs, which includes
15 the cost of investments in the Company's distribution system, to each class based
16 on each classes proportion of total distribution costs in this case. This is the same
17 method approved by the Commission in Case No. U-21389. It is also the same
18 method the Company uses to allocate Electric Rate Case Deferral surcharge costs,
19 which also consists of investments in the Company's distribution system and has
20 been previously approved by the Commission.

21 Q. What is Staff's position concerning the Company's allocation of the IRM
22 surcharge?

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 A. The Company's proposed allocation method for the IRM surcharge should be
2 approved by the Commission. The IRM costs consist of investments on the
3 Company's distribution system and therefore, allocating these costs to the
4 customer classes based on their share of total distribution costs in this case is most
5 appropriate.

6
7 **Summary**

8 Q. Please summarize your recommendations in this proceeding.

9 A. Staff's recommendations are as follows:

10 1. Based upon Staff's 2023 historic customer charge calculation which results in a
11 residential customer charge of \$7.36 per month, Staff recommends that the
12 residential customer charge remain at its current amount of \$8.00 per month.

13 2. Staff recommends the Commission continue to approve the Company's
14 Alternative Class Peak method. Staff agrees that for the purpose of allocating
15 distribution plant costs, classes should be determined mainly by voltage level.
16 Alternative Class Peak is currently in rates.

17 3. Staff's net capacity revenue requirement based on Staff's case is \$246.4
18 million, compared to the Company's proposed capacity revenue requirement of
19 \$293.6 million. Staff's capacity revenue requirement results in a SRM capacity
20 charge of \$72.90/MW-Day, compared to the Company's proposed SRM capacity
21 charge of \$86.88/MW-Day.

DIRECT TESTIMONY OF MARK J. PUNG
CASE NUMBER U-21585
PART II

1 4. Staff recommends the Commission approve Staff's Substation Ownership
2 Credits. Staff used the same method as the Company to calculate its Substation
3 Ownership Credits but updated for Staff's revenue requirement.
4 5. The Company's surcharge allocation methods for the Demand Response,
5 Electric Rate Case deferral, and Investment Recovery Mechanism (IRM) revenue
6 requirements should be updated for Staff's case and approved by the Commission.
7 Q. Does this conclude your testimony?
8 A. Yes, it does.

QUALIFICATIONS AND DIRECT TESTIMONY OF
NICHOLAS M. REVERE
MICHIGAN PUBLIC SERVICE COMMISSION

September 27, 2024

QUALIFICATIONS OF NICHOLAS M. REVERE
CASE NUMBER U-21585
PART I

1 Q. Please state your name and business address.

2 A. My name is Nicholas M. Revere. My business address is 7109 West Saginaw Hwy,
3 Lansing, Michigan 48917.

4 Q. By whom are you employed and in what capacity?

5 A. I am employed by the Michigan Public Service Commission (MPSC or Commission) as
6 the Manager of the Rates and Tariff Section of the Regulated Energy Division.

7 Q. Would you briefly describe your academic background?

8 A. I earned a Bachelor of Arts degree in Political Science and a Bachelor of Arts degree in
9 Economics from Michigan State University in 2006. In August of 2008 and 2009, I
10 completed the annual National Association of Regulatory Utility Commissioners
11 (NARUC) regulatory studies program at Michigan State University, which included
12 courses on ratemaking, rate case auditing, regulatory policy, and other regulatory issues.
13 In September of 2010, I completed the Institute for Public Utilities Advanced Regulatory
14 Studies Program. In October 2012, I completed the Association of Edison Illuminating
15 Companies' Advanced Course in Load Research.

16 Q. What are your current responsibilities at the MPSC?

17 A. As Manager of the Rates and Tariff Section, I supervise the members of and oversee the
18 responsibilities of the section. The responsibilities of the section include, but are not
19 limited to, analyzing utility reports, financial records, and rate case filings to determine
20 the appropriate level of rates for regulated energy utilities, utilizing laws, regulations, and
21 Commission policies. The section is charged with conducting MPSC Staff (Staff) Cost of
22 Service allocation studies (COSS) and rate designs for gas and electric utilities and
23 reviewing special contracts, gas storage rates, and Act 9 intrastate pipeline rates. The

QUALIFICATIONS OF NICHOLAS M. REVERE
CASE NUMBER U-21585
PART I

section is also involved in customer complaint and inquiry processing, updating electric and gas comparison spreadsheets for the MPSC website, and tariff administration.

Q. Have you previously filed testimony in any cases before the Commission?

A. Yes. I filed testimony in the following cases:

DIRECT TESTIMONY OF NICHOLAS M. REVERE
CASE NUMBER U-21585
PART II

1 Q. What is the purpose of your testimony in this case?

2 A. The purpose of my testimony is to present Staff's alternative calculation for the state
3 reliability mechanism (SRM) capacity revenue requirement and charges.

4 Q. Are you sponsoring any exhibits?

5 A. No.

6 **Alternative SRM Calculation**

7 Q. Why is Staff presenting an alternative SRM calculation in the instant case?

8 A. Since the initial approval of the current method of calculating the SRM capacity charge
9 and associated rates, Staff has become aware of several potential issues with that method.
10 For example, the required reconciliation of projected energy sales revenue net of fuel
11 costs to the actuals recommended by Staff witness Mark J. Pung, calculated as the value
12 of the Company's generation at the locational marginal price (LMP), has the potential to
13 drive the capacity charge unreasonably low or high depending on the relationship
14 between the Company's costs to produce that energy and both actual and projected
15 LMPs. While it appears the Company has not yet included this reconciliation in the
16 calculation of its SRM calculation, as discussed by Staff witness Pung it is Staff's
17 opinion that a reconciliation is required by statute. In addition, the current capacity
18 charge method produces increasingly questionable results the more a utility relies on
19 purchased power agreements for the provision of power to its customers. For these
20 reasons, Staff is presenting an alternative method for calculating the SRM capacity
21 charge and revenue requirement, consistent with its proposal in the initial set of SRM
22 cases.

23 Q. What costs are properly included as part of the capacity charge?

DIRECT TESTIMONY OF NICHOLAS M. REVERE
CASE NUMBER U-21585
PART II

1 A. 2016 PA 341 Section 6w(3) lays out which costs should be included, and offsets thereto,
2 as follows:

3 In order to ensure that noncapacity electric generation services are not
4 included in the capacity charge, in determining the capacity charge, the
5 commission shall do both of the following and ensure that the resulting
6 capacity charge does not differ for full service load and alternative electric
7 supplier load:
8

9 (a) For the applicable term of the capacity charge, include the capacity-
10 related generation costs included in the utility's base rates, surcharges, and
11 power supply cost recovery factors, regardless of whether those costs
12 result from utility ownership of the capacity resources or the purchase
13 or lease of the capacity resource from a third party.
14

15 (b) For the applicable term of the capacity charge, subtract all non-capacity-
16 related electric generation costs, including, but not limited to, costs
17 previously set for recovery through net stranded cost recovery and
18 securitization and the projected revenues, net of projected fuel costs, from
19 all of the following:
20

- 21 (i) All energy market sales.
- 22 (ii) Off-system energy sales.
- 23 (iii) Ancillary services sales.
- 24 (iv) Energy sales under unit-specific bilateral contracts.
25

26 Q. What costs should be considered capacity-related for the purpose of calculating the
27 capacity charge per 2016 PA 341 Section 6w(3)?

28 A. Costs incurred to supply capacity should be included as capacity-related costs. In Staff's
29 opinion, the proper cost of capacity is the Cost of New Entry (CONE), or the cost to build
30 a combustion turbine (CT). The characteristics of a CT are such that it effectively supplies
31 only capacity. A CT is relatively expensive to run to produce energy, but relatively
32 inexpensive to build. Therefore, it is only economically utilized to supply energy in those
33 hours when load is at its highest. These hours are also those which are considered to set
34 the capacity need of the utility to serve its customers. Plants other than CTs are more

DIRECT TESTIMONY OF NICHOLAS M. REVERE
CASE NUMBER U-21585
PART II

expensive to build and less expensive to run, making them the most cost-effective choice only if they run enough hours a year so that the total cost is lower. Therefore, the difference between the cost to build a CT and any other type of plant is the capital cost expended to produce lower energy costs. In Staff's opinion, this cost should properly be considered an energy cost. However, the law requires that net sales to the market be applied as an offset to the capacity-related costs. As all energy is bid into the market at the cost to run a plant, but plants are paid if dispatched at the highest bid called in the supply stack, these net-energy market sales (imperfectly) capture what Staff would consider to be the energy related portion of capacity costs. Therefore, to remove all costs above a CT and then apply an offset which effectively, if imperfectly, does the same, would be double counting the offset. An alternative is discussed below.

Q. What costs would be identified as capacity-related under this method?

A. Costs currently allocated using the production cost allocator and other capacity-related costs would be the starting point for this determination. Then the percentage applied to determine which of those costs are capacity-related would be set at the percentage necessary to make the resulting amount equal to CONE or some other measure of the value of capacity, as determined by the Commission. More specifically, Staff envisions the total dollars of capacity cost would be that portion of production costs described above corresponding to some measure of the Company's generation and purchased capacity or capacity need (for example, the amount of capacity the Company is required to demonstrate it can serve under the capacity demonstration process at the MPSC or at MISO) multiplied by the most recent MISO CONE for zone 7. This would treat all costs in excess of CONE (or the Commission's chosen value of capacity) as non-capacity-related costs. Should the

DIRECT TESTIMONY OF NICHOLAS M. REVERE
CASE NUMBER U-21585
PART II

1 Commission determine such a method is more appropriate, Staff recommends that either
2 the CONE for MISO zone 7 in the MISO planning year best matching the Company's
3 projected test year or the cost of capacity used to calculate payments by the Company to
4 PURPA generators, be utilized. Either of these would provide consistency in the
5 Commission's determination of the value of capacity.

6 Q. What is the alternative to the current method of determining net energy sales mentioned
7 above?

8 A. The costs associated with purchasing energy from the market when the Company's plants
9 produce less than its customers use are included in rates as an energy cost, appropriately.
10 As a result, and to avoid the potential double-count mentioned previously in my testimony,
11 the revenue produced from energy sales into the market resulting from plants producing
12 above the use of the Company's customers should be included as an offset to the cost of
13 the capacity used to produce that energy. In fact, Section 6w(3)(b) of Act 341 expressly
14 requires revenue from "all energy market sales" be included as an offset to the cost of
15 capacity. Under the alternative scenario, Staff envisions only purchases beyond the
16 requirements of the Company's customers (i.e. any annual positive revenues from net
17 energy market sales, calculated as the hourly difference between the Company's load and
18 generation multiplied by the hourly LMP) would be included as the offset, as only such
19 positive revenues should be considered "sales" under the statute .Beyond the statutory
20 requirement, it is the appropriate disposition of such revenue, as it is the additional capital
21 expenditure over that of a CT which enables the production of energy at a cost low enough
22 to make money in the market. Therefore, revenue from such sales should be used to offset
23 the higher capital expenditures required to enable them. The Commission recognized

PART II

1 similar principles in Case No. U-12639, by using net revenues from third party sales to
2 offset fixed generation costs. *In re the Implementation of Section 10a(10) of 2000 PA 14*,
3 MPSC Case No. U-12639, 12/20/2001 Order, pp 4 and 10.

4 Q. Has Staff prepared a calculation consistent with this alternative calculation of the SRM
5 capacity requirement and charge?

6 A. Not in the instant case, though Staff recommends that, if the Commission finds this
7 alternative compelling, that they require the Company to file a calculation consistent with
8 that determination in their next general rate case. Staff has outlined one potential version
9 of such a calculation, but there may be differences of opinion amongst interested parties;
10 therefore, Staff would consider any modifications to this outline based on evidence
11 provided in future cases, and Staff may well determine modifications may be appropriate
12 to propose in those cases as the subject is further explored.

13 **Summary**

14 Q. Please summarize your recommendations.

15 A. My recommendations are as follows:

16 1. The Commission should consider Staff's proposed alternative SRM calculation to avoid
17 pitfalls in the current calculation.

18 Q. Does this conclude your testimony?

19 A. Yes, it does.

PART I

Q. Please state your name and business address.

A. My name is Shannon Rueckert. My business address is 7109 W. Saginaw Hwy, Lansing, MI 48917.

Q. By whom are you employed and in what capacity?

A. I am employed by the Michigan Public Service Commission (MPSC or Commission) as an auditor in the Revenue Requirements section.

Q. How long have you been employed by the Commission?

A. I have been employed since February of 2018.

Q. What is your educational and professional background?

A. I previously served in the US Air Force as a Fuels Resource Controller, responsible for controlling base wide fuels operations and accounting. My duties included daily close out and reconciliation of all fuel transactions. After serving in the Air Force, I managed a family business. While general manager of the business I performed all managerial accounting functions. In 2015, I graduated from the University of Michigan with a Bachelor of Business Administration and a concentration in accounting degree with High Honors. I was previously employed at Andrew's Hooper Pavlik, PLC as a staff accountant where I performed tax preparation and audits of municipalities, retirement plans, and banks. In April of 2019 I completed the Master of Business Administration program, with a concentration in accounting, at the University of Michigan. I have been involved in rate case audits and performed audit work in the following cases:

DIRECT TESTIMONY OF SHANNON RUECKERT

CASE NUMBER U- 21585

PART II

1 Q. What is the purpose of your testimony?

2 A. The purpose of my testimony is to present Staff's Other Operations and Maintenance
3 (O&M) Expense projection for the 12-month test period ending September 30, 2025. This
4 testimony also supports Staff recommendations relating to the Company's Other Employee
5 Benefits expense for the 12-month periods ending February 28, 2026.

6 Q. Are you sponsoring exhibits?

7 A. Yes.

8	Exhibit	Title
---	---------	-------

9	S-17.1	Other Employee Benefits Expense for the Test Year Ending February 28,
10		2026.

11	S-17.2	Other Employee Benefits Leave It Better Award for the Test Year Ending
12		February 28, 2026.

13 Q. Please describe Exhibit S-17.1.

14 A. Exhibit S-17.1 presents Staff's Other Employee Benefits projection of \$3,541,000 for the
15 12-month period ending February 28, 2026, a decrease of \$795,000 from the Company's
16 request of \$4,081,000. Projections were developed through the categories listed in column
17 (a.). Column (c.) presents the Company's projection. Column (e.) presents Staff's
18 projection, with the difference shown in column (d.). The difference in column (d.)
19 represents Staff's adjustment and are supported by corresponding exhibits listed in column
20 (b.).

21 Q. Please describe Exhibit S-17.2.

22 A. Exhibit S-17.2 presents the segmented expense projections for the Leave It Better Award
23 program provided by the Company.

DIRECT TESTIMONY OF SHANNON RUECKERT
CASE NUMBER U- 21585
PART II

Other Benefits expense Leaving it Better Award (LIBA)

Q. Please describe the Company's requested Leaving it Better Award (LIBA).

A. In the direct testimony of Kenda K. Grob, page 37, the Company proposed the introduction of an employee award program titled the "Leaving it Better Award." The program is said to award employee's a lump sum of \$4,000 that further the "Company's goals, operational excellence, customer satisfaction, and corporate reputation." The expense is embedded in the total Other Benefits projection on exhibit A-66 (KKG-1). The Company provided the cost of \$795,000 in operation and maintenance expense in the projected test year for the LIBA program to Staff and is presented on exhibit S-17.2.

Q. Does Staff support the Company's request for the rate payer funded Leaving it Better Award?

A. No. Staff does not support the Company's request for the LIBA program. It is Staff's position that the program does not benefit the rate payer beyond its cost. Promotability and salary increases are incentives to achieve operational excellence and customer satisfaction as part of the employee's compensation package. Witness Conrad testified the "the Company's management believes Consumers Energy should pay a fair and reasonable salary, comparable to the market that is equitable to employees, consistent with Company values and strategies, and that supports the highest level of customer service at a reasonable cost." See the Direct Testimony of Amy M. Conrad, page 10. The Company's Employee Incentive Compensation Program (EICP) already provides short-term incentive compensation for operational goals. Furthering the Company's corporate reputation does not benefit the rate payer and should be funded by shareholders instead. Staff recommends the Commission reject the LIBA program expense of \$795,000 as it does not provide additional benefit to

DIRECT TESTIMONY OF SHANNON RUECKERT

CASE NUMBER U- 21585

PART II

1 the rate payer. Staff also recommends a corresponding disallowance of the capital portion
2 of the LIBA totaling \$2,666,000 as shown in Figure 1 of Staff Witness Witt's testimony.
3 \$875,000 for the bridge year ending December 31, 2024, \$894,000 for the 2 months ending
4 February 28, 2025, and \$897,000 for the test year ending February 28, 2026.

5 **DB Pension/OPEB Volatility Mechanism**

6 Q. Does Staff support the Company's request to continue the DB Pension/OPEB Volatility
7 Mechanism?

8 A. Yes. Staff supports approval of the Company's request deferral, amortization, and
9 continuation of the DB Pension/OPEB Volatility Mechanism as described in the direct
10 testimony of Company Witness Kendra K. Grob on page 11 and 12. The mechanism
11 requested authorizes the Company to defer the annual difference between the DB
12 Pension/OPEB expense included in rates versus the actual annual DB Pension/OPEB
13 expense recorded by the Company following ASC 715. Should the actual annual DB
14 Pension/OPEB expense be less or greater than the expense approved in rates, that
15 difference would be recorded as a regulatory liability or asset and be amortized over 10
16 years starting the following January. Staff recognizes the potential for large variability in
17 future expenses and the benefit to rate payers that this mechanism would provide. Staff witness
18 Rueckert audited the Company's request deferral and amortization on page 12 of the direct
19 testimony of Company Witness Kendra K. Grob and found no errors.

20 Q. Please summarize your recommendations.

21 A. First, Staff is recommending a disallowance of the Company's Leaving it Better Award
22 program. A decrease of \$795,000 from the Company's request of \$4,081,000 for O&M
23 and a corresponding capital decrease of \$2,666,000. \$875,000 for the bridge year ending

DIRECT TESTIMONY OF SHANNON RUECKERT

CASE NUMBER U- 21585

PART II

1 December 31, 2024, \$894,000 for the 2 months ending February 28, 2025, and \$897,000
2 for the test year ending February 28, 2026. Second, Staff recommends approval of the
3 Company's request for deferral, amortization, and continuation of the DB Pension/OPEB
4 Volatility Mechanism.

5 Q. Does this complete your testimony?

6 A. Yes.

1 Q. Please state your name and business address.

2 A. My name is Michelle L. Schreur and my business address is 7109 West Saginaw
3 Highway, Lansing, MI 48917.

4 Q. By whom are you employed and in what capacity?

5 A. I am employed by the Michigan Public Service Commission (MPSC or
6 Commission) as Manager of the Income Analysis Unit in the Revenue
7 Requirements Section of the Regulated Energy Division.

8 Q. Please describe your educational background.

9 A. I graduated from Grand Rapids Community College in 2015 with an Associate
10 Degree in Business Administration. In 2017, I graduated from Grand Valley State
11 University with a Bachelor of Business Administration Degree in Accounting and
12 Finance. In September of 2017, I attended a Utility Business Model/Financial
13 Valuation Training hosted by Michigan State University Institute of Public
14 Utilities (MSU IPU). In August of 2018, I attended a fundamental and
15 intermediate Annual Regulatory Studies Program hosted by MSU IPU.

16 Q. Please describe your professional background with the MPSC.

17 A. I began my employment with the MPSC in September of 2017 as an auditor in the
18 Revenue Requirements Section of the Regulated Energy Division. In that
19 position my responsibilities included, but were not limited to, performing rate
20 case audits using the financial and operating records of regulated utilities,
21 applicable laws, regulations, and Commission policies to determine the necessity
22 of rate relief. In August 2022, I was promoted to my current position as Manager

1 Q. What is the purpose of your testimony?

2 A. The purpose of my testimony is to present MPSC Staff's (Staff) overall
3 Operations and Maintenance (O&M) Expense Projection for the 12-month period
4 ending February 28, 2026 (projected test year) in the instant Consumers Energy
5 Company (Consumers or the Company) rate case.

6 Q. Are you sponsoring any exhibits in this proceeding?

7 A. Yes, I am sponsoring the following exhibits:

8 S-3 Schedule C-5: Projected Operations and Maintenance (O&M) Expense
9 for Test Year Ending February 28, 2026

10 Q. Was this exhibit prepared by you or under your direction?

11 A. Yes.

12

13 **Projected O&M Expense**

14 Q. Please describe Exhibit S-3, Schedule C5.

15 A. Exhibit S-3, Schedule C5, presents Staff's O&M Expense Projection of
16 \$672,576,000 for the 12-month period ending February 28, 2026, a decrease of
17 \$2,454,000 from the total Company's projection of \$675,029,000. Staff's
18 projections were developed through the categories listed in column (a). Column
19 (c) presents the Company's Projection and column (e) presents Staff's Projection,
20 with the difference shown in column (d). The differences in column (d) represent
21 Staff adjustments and are supported by corresponding Sources listed in column
22 (b). A reconciliation by Expense, Amount, and Witness is shown at the bottom of
23 the exhibit.

DIRECT TESTIMONY OF TIMOTHY G. WITT
CASE NUMBER U-21585
PART II

1 Q. What is the purpose of your testimony?

2 A. The purpose of my testimony is to present the MPSC Staff's ("Staff") projected rate base
3 for the test period ending February 28, 2026 ("projected test year" or "test year") in the
4 instant Consumers Energy Company ("Consumers Energy" or the "Company") electric
5 rate case. Additionally, I will be supporting adjustments to the Company's projected
6 depreciation and amortization expense, property tax expense, and to allowance for funds
7 used during construction ("AFUDC") corresponding to certain Hardy Dam capital
8 adjustments recommended by Staff witness DeCooman, and certain Solar capital
9 adjustments recommended by Staff witness Harlow. These adjustments are included on
10 Staff Exhibit S-3, Schedule C-1, sponsored by Staff witness Nichols.

11 Q. Are you sponsoring any exhibits in this proceeding?

12 A. Yes, I am sponsoring the following exhibits:

13 S-2 Schedule B-1: Projected Rate Base for Test Year Ending 2/28/26.

14 S-2 Schedule B-2: Projected Total Utility Plant for Test Year Ending 2/28/26.

15 Q. Were these exhibits prepared by you or under your direction?

16 A. Yes.

17 **RATE BASE**

18 Q. What is the total rate base being presented by Staff in the instant case for the projected test
19 year on a total Company basis?

20 A. Referring to Staff Exhibit S-2, Schedule B-1, Line 7, Column (e), Staff presents a total
21 projected rate base of \$14,808,450,000 on a total Company basis. This is a decrease of
22 \$763,030,000 from the Company's \$15,571,480,000 projection presented on Exhibit A-12,
23 Schedule B-1, Line 7, Column (c), in its initial filing. Below, my testimony will address

DIRECT TESTIMONY OF TIMOTHY G. WITT
CASE NUMBER U-21585
PART II

1 the individual components which result in Staff's \$763,030,000 reduction to the
2 Company's filed projected rate base.

3 **Total Utility Plant**

4 Q. What is the total utility plant being presented by Staff for the projected test year on a total
5 Company basis?

6 A. Referring to Exhibit S-2, Schedule B-1, Line 2, Column (e), Staff presents a projected total
7 utility plant of \$18,022,061,000 on a total Company basis. This is a decrease of
8 \$777,953,000 from the Company's \$18,800,014,000 projection presented on Exhibit A-12,
9 Schedule B-1, Line 1 Column (c), in its initial filing.

10 Q. Please explain the \$777,953,000 reduction.

11 A. The \$777,953,000 reduction is the direct result of two adjustment made by Staff. First
12 adjustment of \$557,670,000, is the corresponding impact on plant in service ("PIS")
13 resulting from Staff adjustments to the Company's historic and projected capital
14 expenditures. The second adjustment of \$220,283,000 is the corresponding impact of
15 adjustments made to construction work in progress ("CWIP") resulting from Staff
16 adjustments to the Company's historic and projected capital expenditures for projects
17 slated to close to PIS after the end of the test year. A summary of the above adjustments
18 and the Staff witness supporting each is illustrated in Figure 1 on page 6.

Depreciation Reserve

Q. What is the depreciation reserve amount being presented by Staff for the projected test year on a total Company basis?

A. Referring to Exhibit S-2, Schedule B1, Line 2, Column (e), Staff presents a projected depreciation reserve of \$6,340,272,000 on a total Company basis. This is a decrease of \$14,923,000 from the Company's \$6,355,195,000 projection presented on Exhibit A-12, Schedule B-1, Line 2, Column (c), in its initial filing.

Q. Please explain the \$14,923,000 reduction.

A. The \$14,923,000 reduction is the corresponding impact on the depreciation reserve resulting from Staff's adjustments to the Company's historic and projected capital expenditures and is illustrated in Figure 1 above.

DIRECT TESTIMONY OF TIMOTHY G. WITT
CASE NUMBER U-21585
PART II

DEPRECIATION AND AMORTIZATION EXPENSE ADJUSTMENT

Q. What adjustment to the Company's test year projected depreciation and amortization expense are you supporting?

A. I am supporting an adjustment on Exhibit S-3, Schedule C-1, Line 7, Column (d), sponsored by Staff witness Nichols, to decrease the Company's test year projection by \$19,725,000.

Q. Please explain the \$19,725,000 reduction on a total Company basis.

A. The \$19,725,000 reduction is the corresponding impact on depreciation and amortization expense resulting from Staff adjustments to the Company's historic and projected capital expenditures and is illustrated in Figure 1 on page 6 above.

PROPERTY TAX EXPENSE ADJUSTMENT

Q. What adjustment to the Company's test year projected property tax expense are you supporting?

A. I am supporting an adjustment on Exhibit S-3, Schedule C-1, Line 8, Column (d) sponsored by Staff witness Nichols, to decrease the Company's test year projection by \$8,988,000 on a total company basis.

Q. Please explain the \$8,988,000 reduction.

A. The \$8,988,000 reduction is the corresponding impact on property tax expense resulting from the test year plant impacts of Staff's adjustments to the Company's historic and projected capital expenditures (as illustrated in Figure 1 on page 6 above) multiplied by the Company's property tax rate of 1.1553991% from Company Exhibit A-161 (BJV-1).

Q. Why did you incorporate this adjustment as part of the test year impacts resulting from Staff's adjustments to the Company's historic and projected capital expenditures?

DIRECT TESTIMONY OF TIMOTHY G. WITT
CASE NUMBER U-21585
PART II

1 A. The Company's projected property tax expense is developed, in part, by using its projected
2 plant balances. Since Staff's capital expenditure adjustments result in a decrease to the
3 Company's projected test year plant balance, a corresponding adjustment is needed to
4 decrease the projected test year property tax expense.

5 **AFUDC**

6 Q. What adjustment to the Company's test year projected AFUDC are you supporting?

7 A. I am supporting an adjustment on Exhibit S-3, Schedule C-1, Line 15, Column (d)
8 sponsored by Staff witness Nichols, to decrease the Company's test year projection by
9 \$14,362,000 on a total Company basis.

10 Q. Please explain the \$14,362,000 reduction.

11 A. The \$14,362,000 reduction is the corresponding impact on AFUDC resulting from certain
12 Hardy Dam capital adjustments recommended by Staff witness DeCooman and certain
13 Solar adjustments recommended by Staff witness Harlow and is illustrated in Figure 1 on
14 page 6 above.

15
16 **SUMMARY OF RECOMMENDATIONS**

17 Q. Please summarize your recommendations.

18 A. On a total Company basis, I recommend the ALJ and Commission approve the following
19 based on Staff's capital expenditure adjustments: Staff's projected rate base of
20 \$14,808,450,000, Staff's \$19,725,000 reduction to depreciation and amortization expense,
21 Staff's \$8,988,000 reduction to property tax expense, and Staff's \$14,362,000 reduction to
22 AFUDC. Specifically, on a total Company basis, my testimony supports a \$763,030,000
23 reduction to the Company's projected rate base, a \$557,670,000 decrease from the

DIRECT TESTIMONY OF TIMOTHY G. WITT
CASE NUMBER U-21585
PART II

1 Company's \$18,221,156,000 projected plant in service, a decrease of \$220,283,000 from
2 the Company's \$568,713,000 CWIP, a decrease of \$19,725,000 from the Company's
3 \$771,698,000 depreciation and amortization expense, a decrease of \$8,988,000 from the
4 Company's \$254,100,000 projected property tax expense, and a decrease of \$14,362,000
5 from the Company's \$17,033,000 projected AFUDC.

6 Q. Does this conclude your testimony?

7 A. Yes.

Notes

(1) Capacity and energy production costs adjusted to capture elements occurring outside the Cost-of-Service Study.

(2) Includes Non-SRM capacity related costs.

(3) Excludes IRM costs recovered through the IRM surcharge.

(4) Credit adjustments approved in Case No. U-21389

Question:

1. What is the amount of incentive compensation for the top 5 officers related to operational measures that is included in the electric O&M expense in this case for the historical year of 2023 and the projected test year 2026?

Response:

The amount of incentive compensation for the top 5 officers related to operational measures that is included in the electric O&M expense in this case for the historical year of 2023 was \$392,100 and the projected test year 2026 is \$414,700.

Question:

3. Please provide the market median for total compensation level and market median for incentive compensation level for the top 5 officers.

Response:

The market median information requested is confidential, proprietary, and commercially sensitive data belonging to third parties.

Consumers Energy's Compensation Committees engage a consultant (Pay Governance) to provide information regarding officer compensation practices of the Compensation Peer Group as well as additional information from Willis Towers Watson published surveys of compensation in the public utility sector and general industry.

The Willis Towers Watson survey sources used by Pay Governance are produced solely for use by database participants and are maintained by Willis Towers Watson in connection with the participant's own internal human resources management department. The surveys are the confidential and proprietary work product of Willis Towers Watson, which owns all related intellectual property rights. Pay Governance has written consent from both Willis Towers Watson and CMS Energy to use the surveys on CMS Energy's behalf. Pay Governance is prohibited from using or reproducing the database and survey reports prepared by Willis Towers Watson.

Although the Company is prohibited from sharing the market data used in setting compensation for its top five officers, the Company recognizes that it could be helpful for Staff to have access to market data to evaluate the reasonableness of the compensation included in rates for the Company's top five officers.

Therefore, the Company has compiled non-confidential market data using the following compensation elements from the Compensation Peer Group's publicly filed proxy statements: salary, stock awards, and non-equity incentive. See Attachment 1 for the compiled data from 2022 based on Compensation Peer Group in the public Regulation 14A 2022 filings. Compensation Peer Group from the most current public Regulation 14A 2023 filing is being compiled and will be provide once available. Data is organized in order of highest paid through the 2nd, 3rd, 4th and 5th highest paid named officers. This is the same information that Willis Towers Watson collects in its surveys and that Pay Governance uses to prepare its report, but it is less current than Willis Towers Watson's latest data by up to one year because it represents the compensation data from these peer companies after it has been publicly reported in each company's most recent SEC filings.

Because this market data uses only publicly available non-proprietary information, it does not perfectly represent how compensation is determined or benchmarked for purposes of paying Consumers Energy's

top five officers. When making pay adjustments, the Compensation Committee considers the CEO's recommendations, along with proprietary Compensation Peer Group data, internal equity, tenure, and other proprietary market data from surveys provided by the independent compensation consultant. However, the data in Attachment 1 is sufficiently consistent with the proprietary data that it provides a valid comparison of the compensation of the highest paid through the 2nd, 3rd, 4th, and 5th highest paid named officers compared to the Company's compensation peer group. Compensation does not typically change radically for the companies in the proxy group from one year to the next. The proprietary data is not needed to validate the comparison.

To the extent Staff is still interested in reviewing the proprietary Pay Governance report, the Company has obtained consent to provide extracts rather than the full reports delivered to the Compensation and Human Resources Committees.

Consumers Energy is permitted to provide access to the report extracts if the MPSC Staff agrees to the following conditions:

That it will review these materials in the presence of an appropriate representative of CMS and shall keep these extracts strictly confidential and shall not copy or distribute these extracts to any other party, shall use them solely for the purpose of this inquiry and shall exempt Pay Governance from public disclosure under any other inquiry or applicable freedom of information or open records acts.

Source: InflationData.com

*The Federal Reserve projects PCE inflation as opposed to CPI inflation, which is projected by the other two sources. The two measures are similar and both relied upon in the industry. The Federal Reserve is being cited in this rate case in lieu of Staff's typical Value Line Citation. Value Line appears to no longer be publishing inflation projections.

Notes

1) actual common equity figures through June 2024 from Consumers Energy's financial reports

2) retained earnings

2023 net income = \$867 million

\$867 million*(1 - 0.8) = \$173.0 million: Estimating \$174 million in retained earnings

\$174 million / 12 months = \$14.50 million added to balance per month

Estimating retained earnings from July 2024 - February 28, 2026

<u>3) equity infusion(s)</u>	<u>Yr -2024</u>	<u>Yr-2025</u>	<u>Yr-2026</u>
Company Forecast	Sept. - \$385 million	Feb. - \$525 million Jun. - \$500 million	Feb. - \$475 million
Staff Forecast	Sept. - \$385 million	Feb. - \$555 million	no infusion

In adherence with the Commission's objective of a levelized debt and equity balance for Consumers Energy, Staff recognizes a future equity infusion schedule of \$385 million in Sept. 2024 and \$555 million in February 2025 in this case. No other infusions are included.

Case No.: U-21585

Witness: Kirk D. Megginson

Exhibit No: S-4

Schedule: D-6

page: 1 of 5

Date: Sep. 27, 2024

Question:

Please explain the month, year and amount the Company borrowed from its 2nd and 3rd short-term financing options, the Scotiabank Revolver or the JPMorgan Revolver?

- i. If no borrowing has occurred or occurred over 5 years ago, why should the Company maintain over \$1 billion in facility availability?

Response:

While the Company has not borrowed from its ScotiaBank or JPMorgan revolvers in recent years, the Company has borrowed under its Commercial Paper Program which reduces the availability under these revolvers. Access to the commercial paper market requires an equivalent amount of revolving credit capacity as a “backstop.” The current maximum capacity under the Company’s Commercial Paper Program is \$500 million; therefore, of the Company’s \$1.35 billion of revolving credit facilities, \$500 million is used to support commercial paper issuance. The remaining revolver capacity is a vital backstop for capital expenditures and upcoming long-term debt maturities.

- i. Refer to pages 25 through 28 of my direct testimony which explains how the Company balances the benefit of carrying sufficient liquidity with the cost of maintaining its short-term credit capacity. The Company’s projected \$1.35 billion total short-term credit capacity is reasonable and necessary to conduct daily operations and also to keep credit risk at a reasonable level. To maintain strong financial health, it is important for the Company to maintain adequate short-term financing capacity for normal business operations while retaining an adequate amount of additional liquidity for cases of extreme market fluctuations or other unforeseen circumstances. An example of this was year-end 2022, when the Company needed over \$1 billion of short-term financing in response to significantly increased cost of gas. The Company was able to procure a \$1 billion term loan to fund this liquidity shortfall, but access to such a facility is not guaranteed in the future.

Consumers Energy Company (Electric Division)
Test Year Ending February 28, 2026

Question:

On page 27 of your direct testimony, you state that the Company was able to secure \$1 billion of short-term financing capacity in July 2022 during the period of a dramatic rise in the price of natural gas. Did the Company finance the \$1 billion using its already in-place \$1.35 billion short-term financing facility mix?

- i. Since the \$1.35 billion is available capacity from the Company's revolvers, not including intercompany borrowing, if the Company did not use its in-place facilities, why not?
- ii. Does the Company's short-term financing cost rate, as recommended in the rate case, request cost reimbursement for issuance fees, holding fees, unused fees, letters of credit, and other fees as explained in your testimony?
- iii. Please confirm that ratepayers are paying full financing costs for \$1.85 billion of short-term debt financing facilities.

Response:

No. While the Company did utilize portions of its existing short-term borrowing capacity in 2022, the \$1 billion term loan was not borrowed under these facilities.

- i. As a result of the dramatic increase in gas prices in 2022, the Company's short-term borrowing needs were substantially elevated. Financial markets can be volatile and, at times, inaccessible. Thus, maxing out the Company's short-term borrowing facilities creates significant liquidity risk. In addition, access to the commercial paper market requires an equivalent amount of revolving credit capacity as a "backstop." The current maximum capacity under the Company's Commercial Paper Program is \$500 million; therefore, of the Company's \$1.35 billion of revolving credit facilities, \$500 million is used to support commercial paper issuance. The remaining revolver capacity is a vital backstop for capital expenditures and upcoming long-term debt maturities. Securing the \$1 billion term loan allowed the Company to meet the increased borrowing needs while avoiding maxing out its current short-term borrowing facilities. This significantly reduced liquidity risk while ensuring continued short-term borrowing at reasonable interest rates.

Refer to pages 33 through 36 of my direct testimony which explains how the Company balances the benefit of carrying sufficient liquidity with the cost of maintaining its short-term credit capacity.

- ii. Yes. As explained on pages 33 through 34 of my direct testimony, the cost of short-term debt includes:

- 1 Interest on Borrowings
- 2 Letter of Credit Fees
- 3 Unused (Commitment) Fees
- 4 Amortization / Expense of Facility Fees

- iii. While the Company does not agree with the \$1.85 billion figure referenced in the question, the necessary and customary fees and costs associated with \$1.35 billion of short-term credit facilities are included in the Company's projected cost of short-term debt. The Company cannot avoid incurring these costs except by giving up the short-term borrowing facilities, which would not be a sound business decision. The cost of short-term debt – short term credit facilities represents the cost to provide \$1.35 billion of necessary liquidity to Consumers Energy.

Consumers Energy Company (Electric Division)
Test Year Ending February 28, 2026

Question:

4. On page 28 of your direct testimony, you note that one of your short-term debt facilities is the renewable liability balance of \$78.5 million, which is premised on the implementation of the renewables portfolio standard. When did the renewables portfolio standard begin, i.e. the rate case and calendar year it was developed and described in.

- i. Please provide a per-year amount of the renewables liability balance from the start of program to the current balance.
- ii. Was the renewables liability balance projected or set up to be a temporary balance when it was first initiated?
- iii. Has the renewables liability balance grown in recent years? If so, why?
- iv. What cost rate is the Company billing to ratepayers for the renewables liability balance in rate case proceedings?

Response:

The renewables portfolio standard began in 2008 with Case No. U-15805 pursuant to 2008 PA 295 and as directed by the MPSC.

i.

Renewable Regulatory Liability		
<u>Year</u>	<u>Ending Balance (millions)</u>	
2009	\$	25.0
2010	\$	100.8
2011	\$	160.5
2012	\$	175.4
2013	\$	158.8
2014	\$	131.2
2015	\$	109.3
2016	\$	83.3
2017	\$	56.5
2018	\$	42.1
2019	\$	17.5
2020	\$	8.5
2021	\$	13.5
2022	\$	31.9
2023	\$	29.1

- ii. No. In Case No. U-15805, a renewable liability balance was projected through the majority of the 20-year renewable energy plan.
- iii. It is unclear what the question means when it refers to “recent years.” In general, the renewable liability has remained relatively low over the past five years.
- iv. As explained on page 34 of my direct testimony, Section 21(4) of Public Act 295 of 2008 discusses the cost rate for the renewable liability, and it provides for “the creation of a regulatory liability that accrues interest at the average short-term borrowing rate available to the electric provider during the appropriate period.” Although Section 21 was repealed by Public Act 235 of 2023, Section 22(1) of Public Act 235 specifies that previously approved revenue recovery mechanisms under Section 21 remain in effect. The Company used the projected short-term borrowing rate available to the Company under its Commercial Paper Program of 4.17% and applied this rate to the projected average renewable liability balance for the test period of this case.

Consumers Energy Company (Electric Division)
Test Year Ending February 28, 2026

Case No.: U-21585
Witness: Kirk D. Megginson
Exhibit No: S-4
Schedule: D-6
page: 4 of 5
Date: Sep. 27, 2024

Question:

5. Is the current \$78.5 million renewables liability balance, money that the Company must borrow to meet the obligation?
- i. Is the money collected through a surcharge?
 - ii. If the money is excess money collected over the annual revenue requirement, why does the Company include it in rate cases as a short-term debt requirement?
 - iii. If the renewables liability balance is excess revenues collected from customers, is the money specifically earmarked for the renewables portfolio standard, i.e., is it segregated out and cannot be used as general corporate funds?
 - iv. If no to the question in subsection iii, please explain the use of the proceeds and why they should not be considered a reduction to the Company's revenue requirement in rate case proceedings?

Response:

Refer to page 28 of my direct testimony. The source of this funding is renewables customers at a short-term borrowing rate

i. Consumers Energy does not currently have a renewable energy surcharge in place. However, the renewable energy surcharge contributed to the balance in the years before the surcharge was reduced to zero. The \$78.5 million represents the projected 13-month average of the renewable liability balance for the test year ending February 2026, rather than specifically collections from a renewable surcharge. The liability balance is calculated by taking into account projected renewable assets and voluntary green pricing program costs and revenues with PSCR transfer costs netted against it.

ii. This balance is not "excess money," as PA 295 requires the Company to maintain a liability balance throughout the renewable energy plan period. For further details, refer to the Company's most recent Renewable Energy Cost Reconciliation proceeding reflected in Case No. U-21197. The Company includes the renewable liability balance in its short-term debt calculation because that is the most efficient place to recover the statutory short-term interest paid on the balance. The Commission has approved this methodology since the beginning of the renewable portfolio requirements of PA 295 in 2008.

iii. As explained in part i. and ii. of this response, the \$78.5 million is not "excess revenues." The balance of the renewable regulatory liability is used to support the renewable energy plan. The funds are neither sequestered nor specifically secured.

iv. PA 295 requires Consumers Energy to maintain a renewable liability balance. The liability balance Renewable Energy Plan case. The renewable liability and associated cost is included in the capital structure of the general rate case as a component of short-term debt as explained in response to subpart ii.

Witness: Kirk D. Megginson
Exhibit No: S-4
Schedule: D-6
page: 5 of 5
Date: Sep. 27, 2024

Question:

6. With respect to the renewables liability balance, is there in place a true-up mechanism comparing what was collected to what was spent in the renewables portfolio standard on an annual basis?

- i. Is the Company obligated to pay back excess revenues collected from customers over the course of the program?

Response:

There is no true-up mechanism comparing what was collected to what was spent in the renewable portfolio standard on an annual basis; there is a statutorily established annual reconciliation process. Revenues and costs under the Company's renewable energy plan are reconciled in separate case proceedings. Refer to Case No. U-21197 for the Company's latest renewable energy plan reconciliation.

- i. PA 295 states that any remaining regulatory liability balance at the end of the renewable energy plan shall be refunded back to customers proportional to the amounts paid by those customer classes under the surcharge.
