DTE Electric Company

Proposed Tariff Sheets – 12 Months Ending November 30, 2024

**For all pricing changes on the following tariff sheets,
refer to Exhibit A-16, Schedule F3**

(Continued from Sheet No. C-21.01)

C4 APPLICATION OF RATES (Contd.)

C4.13 Extreme Weather Condition Policy

In the interest of our customers' safety, DTE Energy will adhere to the following policy as it relates to extreme weather conditions and disconnections of Electric and Natural Gas service. DTE Energy will not perform any manual (Non-AMI) or remote disconnections (AMI) when the temperatures are considered extreme. Extreme is defined as follows:

- Extreme Heat – Temperature forecasts 90 degrees and above for 2 consecutive days or more
- Extreme Cold – Temperature forecasts 15 degrees and below and/or wind chills below zero for 2 consecutive days or more

Our internal staff will review and monitor the 10-day predicted forecast temperatures Monday thru Thursday each week using The Weather Channel website- <https://weather.com/>. The following Cities listed below will be used as Regional Map weather check points.

- Detroit – SE Michigan (Detroit, Western Wayne, Oakland County)
- Lapeer – North & South Thumb
- Mecosta – Western Michigan
- Traverse City – Northern Michigan West
- Alpena – Northern Michigan East
- Iron Mountain – Upper Peninsula West
- Sault St. Marie – Upper Peninsula East

Depending on the weather assessment for each of the Regional Map areas, disconnections of service may be suspended or cancelled on a day by day basis for the impacted areas.

C5 CUSTOMER RESPONSIBILITY

C5.1 Service Connections

All wiring upon the customer's premises shall be brought by the customer to any suitable point of service specified by the Company. If the customer wishes a service point other than one specified by the Company, the customer shall pay for any mutually agreed upon extension of the service by a contribution in aid of construction. Only one service connection is installed to a building or group of buildings, including adjacent service areas under a single ownership except where separate service is required to prevent disturbing use of service or where, in the judgment of the Company, additional services are necessary or desirable for operating reasons or for safety requirements. ***The Company, at its discretion, may provide an additional service connection to serve electric vehicle service equipment.*** Detailed specifications for service connections will be furnished upon request at any customer business office.

C6 DISTRIBUTION SYSTEMS, LINE EXTENSIONS AND SERVICE CONNECTIONS (Contd.)

C6.2 Overhead Extension Policy (Contd.)

The amount of any such refund shall be equal to two (2) times the actual annual revenue or \$500 (whichever is greater) for each standard allowance customer subsequently connected directly to the facilities financed by the original customer. Directly connected residential customers are those which do not require the construction of more than 600 feet of single phase line extension or 250 feet on private property. Directly connected commercial and industrial customers are those which do not require payment of a refundable construction advance. Refunds will not be made until the original customer(s) estimated revenues are exceeded by actual revenues as a result of the line extension.

(4) Commercial and Industrial Customers - 1,000 kW and larger

- (a) Standard Allowance - Except for non-refundable contribution in aid of construction for underground service made under the provisions of Rules C6.3 and C6.4, and reserving the Company's rights under C6.1(7), the Company will finance the construction cost necessary to extend its facilities to serve commercial or industrial customers 1,000 kW and larger when such investment does not exceed the allowance calculated using the Standard Allowance Table below. The Company may require the customer to contract for a minimum demand or minimum bill as a condition for providing the allowance.

Standard Allowance –Commercial and Industrial Customers 1,000 kW and Larger*

Rate Schedule	Full Service Contract Term, Years					No Full Service Contract
	1	2	3	4	5

C8 SURCHARGES AND CREDITS APPLICABLE TO POWER SUPPLY SERVICE

C8.1 Power Supply Cost Recovery (PSCR) Clause

- A This Power Supply Cost Recovery Clause permits the monthly adjustment of rates for power supply to allow recovery of the booked costs of fuel and purchased and net interchanged power transactions incurred under reasonable and prudent policies and practices in accordance with 1982 PA 304. All rates for electric service, unless otherwise provided in the applicable rate schedule, shall include a Power Supply Cost Recovery factor.
- B The Power Supply Cost Recovery factor is that element of the rates to be charged for electric service to reflect power supply costs incurred by the company and made pursuant to the Power Supply Cost Recovery Clause.
- C Effective ~~November 25~~ _____, ~~2023~~ the Power Supply Cost Recovery Factor shall consist of an increase or decrease of ~~0.01074634~~ mills per kWh for each full .01 mill increase or decrease in the projected average booked cost of fuel burned for electric generation and purchased and net interchange power incurred above or below a base of 31.26 mills per kWh. Average booked cost of fuel burned and purchased and net interchange power shall be equal to the booked costs in that period divided by that period's net system kWh requirements. Net system kWh requirements shall be the sum of the net kWh generation and net kWh purchased and interchange power.

The following factor(s) were applied to bills rendered during the billing months as indicated below for the calendar years 2022 and 2023.

	2022		2023

C9 SURCHARGES AND CREDITS APPLICABLE TO DELIVERY SERVICE

C9.1 Nuclear Surcharge (NS)

On January 1987 MPSC Order authorized the establishment of an external trust fund to finance the decommissioning of Fermi 2 Power Plant when its operating license expires. The Order approves a decommissioning surcharge on customer bills under which the funds are collected. Pursuant to Commission Order U-10102 dated January 21, 1994, a revised surcharge became effective with service rendered on and after January 22, 1994. In the same order, the Commission authorized the establishment of an external fund to finance the disposal of low-level radioactive waste during the operating life of Fermi 2 Power Plant. Pursuant to an order in Case No. U-14399, costs associated with site security and radiation protection services were removed from base rates and transferred to the Nuclear Surcharge. Pursuant to Commission Order U-16472 dated October 20, 2011, a revised surcharge became effective with service rendered on and after October 29, 2011 Pursuant to Commission Order in Case No. U-17767 a revised surcharge became effective with service rendered on and after December 17, 2015. Pursuant to Commission Order in Case No. U-18255 a revised surcharge became effective with service rendered on and after April 18, 2018. Pursuant to Commission Order in Case No. U-20162 a revised surcharge became effective with service rendered on and after May 9, 2019. Pursuant to Commission Order in Case No. U-20561 a revised surcharge became effective with service rendered on and after May 15, 2020. Pursuant to Commission Order in Case No. U-20836 a revised surcharge became effective with service rendered on and after November 25 ,2022. ***Pursuant to Commission Order in Case No. U-21297 a revised surcharge became effective with service rendered on and after _____ , 2023.***

C9.7.11 INVESTMENT RECOVERY MECHANISM

On December __, 2023, the Michigan Public Service Commission approved the Investment Recovery Mechanism (IRM) in Case No. U-21297. The IRM recovers costs related to certain distribution system investments. A schedule of IRM surcharges covering three IRM years was approved by the Commission and is reflected below. The IRM surcharge is applied on the same basis as the underlying rate schedule. The surcharge schedule will be updated consistent with subsequent Commission Orders.

		13mos Ending December 31, 2024	Year Ending December 31, 2025	Year Ending December 31, 2026

RATE SCHEDULE NO. D1

RESIDENTIAL SERVICE RATE – NON-TRANSMITTING METER

AVAILABILITY OF SERVICE: Available to customers desiring service for all residential purposes through one meter to a single or double occupancy dwelling unit including farm dwellings. A dwelling unit consists of a kitchen, bathroom, and heating facilities connected on a permanent basis. Service to appurtenant buildings may be taken on the same meter.

This rate is not available for common areas of separately metered apartments and condominium complexes, nor to a separate meter which serves a garage, boat well or other non-dwelling applications. After the implementation of Rate Schedule D1.11 (Residential Service Rate – Standard TOU), this rate is only available for residential customers with a non-transmitting meter *or those participating in the Company's PrePay pilot.*

HOURS OF SERVICE: 24 hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 120/240 volts, three-wire. Where available, and the demand justifies, three-phase four-wire, Y connected service may be had at 208Y/120 volts nominally.

In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volts, three-wire service may be taken.

RATE PER DAY:

Full Service Customers:

Power Supply Charges:

Capacity Energy Charges: ~~1.5934.405~~¢ per kWh for the first 17 kWh per day
~~2.2956.347~~¢ per kWh for excess over 17 kWh per day

Non-Capacity Energy Charge: ~~7.6723.945~~¢ per kWh for all kWh

Delivery Charges:

Service Charge: \$8.50 per month
Distribution Charge: ~~8.9056.879~~¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8. Applies only to actual consumption and not to the minimum charge.

Retail Access Service Customers:

Power Supply Charges for Retail Access Customers taking Utility Capacity service for DTE:

Capacity Energy Charges: ~~1.5934.405~~¢ per kWh for the first 17 kWh per day
~~2.2956.347~~¢ per kWh for excess over 17 kWh

Delivery Charges:

Service Charge: \$8.50 per month
Distribution Charge: ~~8.9056.879~~¢ per kWh for all kWh

RATE SCHEDULE NO. D1 (Contd.) RESIDENTIAL SERVICE RATE – NON-TRANSMITTING METER

Surcharges and Credits: As approved by the Commission. See Section C9.8. Applies only to actual consumption and not to the minimum charge. Capacity related surcharges and credits applicable to power supply, excluding PSCR, as approved by the Commission. See Sections C8.5.

BILLING FREQUENCY: Based on a nominal 30-day month. See Section C4.5.

MINIMUM CHARGE: The Service Charge plus any applicable per meter per month surcharges.

CONTRACT TERM: Open order, terminable on three days' notice by either party. Where special services are required, the term will be as specified in the applicable contract rider.

LATE PAYMENT CHARGE: See Section C4.8.

INTERRUPTIBLE SPACE-CONDITIONING PROVISION: Rate D1.1 is available on an optional basis.

WATER HEATING SERVICE: Water heating service is available on an optional basis. See Schedule Designation No. D5.

INCOME ASSISTANCE SERVICE PROVISION (RIA): When service is supplied to a Principal Residence Customer, where the household receives a Home Heating Credit (HHC) in the State of Michigan, a credit shall be applied during all billing months. For an income assistance customer to qualify for this credit, the Company shall require annual evidence of the HHC energy draft or warrant. The customer may also qualify for this credit upon confirmation by an authorized State or Federal agency verifying that the customer's total household income does not exceed 150% of the poverty level as published by the United States department of health and human services or if the customer receives any of the following: i) Assistance from a state emergency relief program; ii) Food stamps or iii) Medicaid.

The monthly credit for the residential Income Assistance Service Provision shall be applied as follows:

Delivery Charges: These charges are applicable to Full Service and Retail Open Access customers.

Income Assistance Credit: \$(8.50) per customer per month

SPECIAL LOW INCOME ASSISTANCE (LIA) CREDIT: To qualify for this credit a customer must provide annual evidence of receiving a Home Heating Credit (HHC) energy draft or warrant, or must provide confirmation by an authorized State or Federal agency verifying that the customer's total household income does not exceed 150% of the poverty level as published by the United States department of health and human services or if the customer receives any of the following: i) Assistance from a state emergency relief program; ii) Food stamps or iii) Medicaid. This credit shall be limited to an annual average of 32,000 customers. This credit shall not be taken in conjunction with a credit for the Income Assistance Service Provision (RIA) or the Senior Citizen Provision

Delivery Charges: The Special Low Income Assistance Credit is \$(40.00) per customer per month and is applicable to Full Service and Retail Open Access customers.

RATE SCHEDULE NO. D1.1

INTERRUPTIBLE SPACE-CONDITIONING SERVICE RATE

AVAILABILITY OF SERVICE: Available on an optional basis to Residential and Commercial customers desiring separately metered interruptible service for central air conditioning and/or central heat pump use. Customers who have more than one heat pump and/or air-conditioning unit which serves their business or home, will not be permitted to have only a portion of their load on the rate, all units will be interrupted upon the signal from the Company. Installations must conform with the Company's specifications. This rate is not available to commercial customers being billed on a demand rate.

HOURS OF SERVICE: 24 hours.

HOURS OF INTERRUPTION: Interruptions may be called for, but not limited to, system testing and evaluation, maintaining system integrity, making an emergency purchase, economic reasons, or when available system generation is insufficient to meet anticipated system load. A System Integrity Interruption Order may be given by the Company when the failure to interrupt will contribute to the implementation of the rules for emergency electrical procedures under Section C3. The Company will limit interruptions to intervals of no longer than 30 minutes in any hour and no longer than 8 hours in any 24-hour period.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 120/240 volts, three-wire. Where available, and the demand justifies, three-phase four wire, Y connected service may be had at 208Y/120 volts nominally.

In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volts, three-wire service may be taken.

RATE PER MONTH: For separately metered space-conditioning service.

Full Service Customers:

Residential Power Supply Charges:

RATE SCHEDULE NO. D1.9

ELECTRIC VEHICLE RATE

AVAILABILITY OF SERVICE: *Available for two uses:*

1. Available on an optional basis to residential and commercial customers desiring separately metered service for the sole purpose of charging licensed electric vehicles. Installations must conform to the Company's specifications. Service under this ~~tariff use~~ is limited to 5,000 customers. Service on this rate is limited to electric vehicles that are SAE J1772 compliant, and all vehicles shall be registered and operable on public highways in the State of Michigan to qualify for this rate. Low-speed electric vehicles including golf carts are not eligible to take service under this rate even if licensed to operate on public streets. The customer may be required to provide proof of registration of the electric vehicle to qualify for the program.
2. *Available for use by Company-owned, public charging up to 20 kW (also known as "Community Charging"). For the purpose of this use, there is no monthly service charge assessed to end-use charging customers. This use has no limit on associated installations.*

HOURS OF SERVICE: 24 Hours

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 120/240 volts, three wire. In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volts, three-wire service may be taken

CONTRACT TERM: Open order, terminable on three days' notice by either party. Where special services are required, the term will be as specified on the applicable contract rider.

MINIMUM CHARGE: The Service Charge plus any applicable per meter per month surcharges.

LATE PAYMENT CHARGE: See Section C4.8.

OPTION 1: TIME OF DAY PRICING

Full Service Customers:

Power Supply Charges:

Capacity Energy Charge:

~~3.4879.593¢~~ per kWh for all On-peak kWh

~~0.8722.399¢~~ per kWh for all Off-peak kWh

Non-Capacity Energy Charge:

~~14.3787.443¢~~ per kWh for all On-peak kWh

~~3.5931.860¢~~ per kWh for all Off-peak kWh

On-Peak Hours: All kWh used between 9 am and 11 pm Monday through Friday.

Off-Peak Hours: All other kWh used.

Delivery Charges:

Service Charge: \$1.95 per month

Distribution Charge: ~~8.9056.879¢~~ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8.

ELECTRIC VEHICLE RATE

Retail Access Service Customer (Contd.):

On-Peak Hours: All kWh used between 9 am and 11 pm Monday through Friday.
Off-Peak Hours: All other kWh used.

Delivery Charges:

Service Charge: \$1.95 per month
Distribution Charge: ~~8.9056~~ **8.79**¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8. Capacity related surcharges and credits applicable to power supply, excluding PSCR, as approved by the Commission. See C8.5.

OPTION 2: MONTHLY FLAT FEE (Residential only):

Closed to new customers as of May 31, 2019. Existing customers will be moved to a new rate by December 31, 2019.

SPECIAL TERMS AND CONDITIONS:

Service under this rate must be supplied through a separately metered circuit and approved electric vehicle charging equipment. Installations must conform with the Company's specifications.

The Company is exploring additional possible metering options to be offered at the Company's discretion. This includes but is not limited to, collecting data directly from charging stations and/or utilizing technology beyond the general service meter to measure EV usage.

RESIDENTIAL SERVICE RATE – STANDARD TOU

AVAILABILITY OF SERVICE: This rate will be available for service no later than May 31, 2023. Available to customers desiring service for all residential purposes though one meter to a single or double occupancy dwelling unit including farm dwellings. A dwelling unit consists of a kitchen, bathroom, and heating facilities connected on a permanent basis. Service to appurtenant buildings may be taken on the same meter.

This rate is not available for common areas of separately metered apartments and condominium complexes, nor to a separate meter which serves a garage, boat well or other non-dwelling applications.

HOURS OF SERVICE: 24 hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 120/240 volts, three-wire. Where available, and the demand justifies, three-phase four-wire, Y connected service may be had at 208Y/120 volts nominally.

In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volts, three-wire service may be taken.

RATE SCHEDULE NO. D2 (Contd.)

RESIDENTIAL SERVICE RATE - SPACE HEATING

Delivery Charges:

Service Charge	\$8.50 per month
Distribution Charge: (June through October):	8.9056-879¢ per kWh for all kWh
Distribution Charge: (November through May):	8.9056-879¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Section C9.8. Applies only to actual consumption and not to the minimum charge. Capacity related surcharges and credits applicable to power supply, excluding PSCR, as approved by the Commission. See Section C8.5.

BILLING FREQUENCY: Based on a nominal 30-day month. See Section C4.5.

MINIMUM CHARGE: The Service Charge plus any applicable per meter per month surcharges.

CONTRACT TERM: Open order, terminable on three days' notice by either party. Where special services are required, the term will be as specified in the applicable contract rider.

WATER HEATING SERVICE: Water heating service is available on an optional basis. See Schedule Designation No. D5.

LATE PAYMENT CHARGE: See Section C4.8.

INTERRUPTIBLE SPACE-CONDITIONING PROVISION: Rate D1.1 is available on an optional basis.

INSULATION STANDARDS FOR ELECTRIC HEATING: See Section C4.9.

INCOME ASSISTANCE SERVICE PROVISION (RIA): When service is supplied to a Principal Residence Customer, where the household receives a Home Heating Credit (HHC) in the State of Michigan, a credit shall be applied during all billing months. For an income assistance customer to qualify for this credit, the Company shall require annual evidence of the HHC energy draft or warrant. The customer may also qualify for this credit upon confirmation by an authorized State or Federal agency verifying that the customer's total household income does not exceed 150% of the poverty level as published by the United States department of health and human services or if the customer receives any of the following: i) Assistance from a state emergency relief program; ii) Food stamps or iii) Medicaid.

The monthly credit for the residential Income Assistance Service Provision shall be applied as follows:

Delivery Charges: These charges are applicable to Full Service and Retail Open Access customers.

Income Assistance Credit: \$(8.50) per customer per month

SPECIAL LOW INCOME ASSISTANCE (LIA) CREDIT: To qualify for this credit a customer must provide annual evidence of receiving a Home Heating Credit (HHC) energy draft or warrant, or must provide confirmation by an authorized State or Federal agency verifying that the customer's total household income does not exceed 150% of the poverty level as published by the United States department of health and human services or if the customer receives any of the following: i) Assistance from a state emergency relief program; ii) Food stamps or iii) Medicaid. This credit shall be limited to an annual average of 32,000 customers.

This credit shall not be taken in conjunction with a credit for the Income Assistance Service Provision (RIA) or the Senior Citizen Provision

Delivery Charges: The Special Low Income Assistance Credit is \$(40.00) per customer per month and is applicable to Full Service and Retail Open Access customers.

RESIDENTIAL SERVICE SENIOR CITIZEN PROVISION: *When service is supplied to a Principal Residence Customer, who is 65 years of age or older and head of household, a credit shall be applied during all billing months. The monthly credit for the Residential Service Senior Citizen Provision shall be applied as follows:*

Delivery Charges: The Senior Citizen Credit is \$(4.25) per customer per month and is applicable to Full Service and Retail Open Access customers.

This credit shall not be taken in conjunction with a credit for the Income Assistance Service Provision (RIA) or the Special Low Income Assistance Credit (LIA).

RATE SCHEDULE NO. D3

GENERAL SERVICE RATE

AVAILABILITY OF SERVICE: Available to customers desiring service for any purpose, ~~except that~~. This rate is not available for service in conjunction with the Large General Service Rate *except when used exclusively to serve electric vehicle service equipment*. At the Company's option, service may be available to loads in excess of 1000 kW for situations where significant modifications to service facilities are not required to serve the excess load. The 1000 kW discretionary demand restriction does not apply to service provided to Electric Vehicle Fast-Charging Stations until June 1, 2024. Effective May 27, 1981, this rate is not available to customers desiring service through one meter for residential purposes to a single or double occupancy dwelling unit.

HOURS OF SERVICE: 24 hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 120/240 volts, three-wire; or three-phase four-wire, Y connected at 208Y/120 volts; or under certain conditions three-phase four-wire, Y connected at 480Y/277 volts.

In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volts, single-phase three-wire; or 208Y/120 volts, three-phase four-wire service may be taken.

RATE PER MONTH:

Full Service Customers:

Power Supply Charges:

Capacity Energy Charge: ~~3.808~~1.426¢ per kWh for all kWh
Non-Capacity Energy Charge: ~~4.105~~7.039¢ per kWh for all kWh

Delivery Charges:

Service Charge: \$11.25 per month
Distribution Charge: ~~4.320~~5.183¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8.

Retail Access Service Customers:

Power Supply Charges for Retail Access Service Customers taking Utility Capacity Service from DTE:
Capacity Energy Charge: ~~3.808~~1.426¢ per kWh for all kWh

Delivery Charges:

Service Charge: \$11.25 per month
Distribution Charge: ~~4.320~~5.183¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Section C9.8. Capacity related surcharges and credits applicable to power supply, excluding PSCR, as approved by the Commission. See Section C8.5.

LATE PAYMENT CHARGE: See Section C4.8.

MINIMUM CHARGE: The Service Charge plus any applicable per meter per month surcharges.

in Case No. U-21297

RATE SCHEDULE NO. D3.1

UNMETERED GENERAL SERVICE RATE

AVAILABILITY OF SERVICE: Available at the option of the Company to customers for loads that can be readily calculated and are impractical to meter.

HOURS OF SERVICE: 24 hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 120/240 volts, three-wire; or three-phase four-wire, Y connected at 208Y/120 volts; or under certain conditions three-phase four-wire, Y connected at 480Y/277 volts.

In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volts, three-wire; or 208Y/120 volts, three-phase four-wire service may be taken.

SERVICE CONNECTIONS: The customer is to furnish and maintain all necessary wiring and equipment, or reimburse the Company therefore. Connections are to be brought to the Company's underground or overhead lines by the customer as directed by the Company, and the final connections to the Company's line are to be made by the Company.

Conversion and/or relocation of existing facilities must be paid for by the customer, except when initiated by the Company. The detailed provisions and schedule of such charges will be quoted upon request.

RATE: Capacity charge of ~~3,170~~**1.198¢** and non-capacity charge of ~~7,738~~**11.094¢** both applied per month per kilowatthour of the total connected load in service for each customer. Loads operated cyclically will be prorated. This rate is based on 350 hours per month. Proration of cyclical loads will not apply when hours of operation are within 10% of base. Proration may either increase or decrease connected load.

The Company may, at its option, install meters and apply a standard metered rate schedule applicable to the service.

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8.

LATE PAYMENT CHARGE: See Section C4.8.

MINIMUM CHARGE: \$3.00 per month.

CONTRACT TERM: Open order on a month-to-month basis.

RATE SCHEDULE NO. D3.2

SECONDARY EDUCATIONAL INSTITUTION RATE

AVAILABILITY OF SERVICE: Available to Educational Institution (school, college, university) customer locations desiring service at secondary voltage. School shall mean buildings, facilities, playing fields, or property directly or indirectly used for school purposes for children in grades kindergarten through twelve, when provided by a public or nonpublic school. School does not include instruction provided in a private residence or proprietary trade, vocational training, or occupational school. "College" or "University" shall mean buildings owned by the same customer which are located on the same campus and which constitute an integral part of such college or university facilities.

HOURS OF SERVICE: 24 hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 120/240 volts, three-wire; or three-phase four-wire, Y connected at 208Y/120 volts; or under certain conditions three-phase four-wire, Y connected at 480Y/277 volts.

In certain city districts, alternating current is supplied from a Y connected secondary network from which 120/208 volts, single-phase three-wire; or 208Y/120 volts, three-phase four-wire service may be taken.

RATE PER MONTH:

Full Service Customers:

Power Supply Charges:

Capacity Energy Charge: ~~3.140~~**1.326**¢ per kWh for all kWh

Non-Capacity Energy Charge: ~~4.130~~**6.907**¢ per kWh for all kWh

Delivery Charges:

Service Charge: \$11.25 per month

Distribution Charge: ~~4.320~~**5.183**¢ per kWh for all kWh

RATE SCHEDULE NO. D3.3 (Contd.)

INTERRUPTIBLE GENERAL SERVICE RATE

RATE PER MONTH:

Full Service Customers:

Power Supply Charges:

Capacity Energy Charge: ~~3.1811.191~~¢ per kWh for all kWh

Non-Capacity Energy Charge: ~~3.4305.881~~¢ per kWh for all kWh

Delivery Charges:

Service Charge: \$11.25 per month

Distribution Charge: ~~4.3205.183~~¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8.

Retail Access Service Customers:

Power Supply Charges for Retail Access Service Customers taking Utility Capacity Service from DTE:

Capacity Energy Charge: ~~3.1811.191~~¢ per kWh for all kWh

Delivery Charges:

Service Charge: \$11.25 per month

Distribution Charge: ~~4.3205.183~~¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Section C9.8. Capacity related surcharges and credits applicable to power supply, excluding PSCR, as approved by the commission. See Section C8.5.

LATE PAYMENT CHARGE: See Section C4.8.

MINIMUM CHARGE: The Service Charge plus any applicable per meter per month surcharges.

PRODUCT PROTECTION PROVISION: (Full Service Customers Only): A customer on rate D3.3 may elect to contract for a minimum load during the period of interruption to protect his product or process. This minimum load called "product protection load" shall not exceed 50% of the total contracted interruptible load and shall be charged rates equal to the General Service Rate (D3) power supply charge.

CONTRACT TERM: The contract term is one year, extending thereafter from month-to-month until terminated by mutual consent or on twelve months written notice by either party, which may be given at any time after the end of the first year. However, where special services are required or where the investment to serve is out of proportion to the revenue derived there from, the contract term will be as specified in the applicable contract rider or Extension of Service Agreement.

RATE SCHEDULE NO. D3.5

COMPANY OWNED EV CHARGING SERVICE PILOT

AVAILABILITY OF SERVICE: Available on an optional basis to customers for use of Company-owned electric vehicle charging equipment. The service may be offered by the Company for charging infrastructure of any kilowatt (kW) capacity at the Company's discretion. Availability shall be subject to the technical compatibility of the customer's vehicle and the charging equipment. This rate is limited to 100 individual chargers. EV charging equipment will be sited at the Company's discretion

HOURS OF SERVICE: 24 hours

CURRENT, PHASE AND VOLTAGE: Service on this rate will be delivered at varying current, phase, and voltage subject to the technical specifications of the customer's vehicle and the EV charging equipment.

RATES: This service is offered as a volumetric charge at the market price of energy, and a single fixed charge encompassing all power supply capacity charges, delivery charges, and surcharges. The volumetric charge is consistent across EV charging equipment capacity. There is a separate fixed charge based on EV charging equipment capacity.

The relevant volumetric charge and session fee will be available to the customer before they choose to take service under this rate.

Volumetric Charges:

Non-Capacity Energy Charge (on peak): ~~4.656~~7.631¢ per kWh

Non-Capacity Energy Charge (off peak): ~~3.869~~6.786¢ per kWh

Fixed Charges:

Session Fee (< 200 kW charger) ~~\$25~~21 per vehicle-session

Session Fee (≥ 200kW charger) ~~\$70~~66 per vehicle-session

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8. Those surcharges reflected on a per meter basis in Sections C8.5 and C9.8 will be converted to a volumetric equivalent for this rate schedule using the following formula: ((meter/month rate)*12 months*count of installed chargers) / total projected sales

METERING: Usage on this rate will be metered at the EV charging equipment

BILLING: An accepted form of payment is required to take service on this rate. Customers taking service on this rate will be billed at the time of service. The billing transaction may be managed by a third-party vendor on behalf of the Company.

LATE PAYMENT CHARGE: Payment is required at the point-of-sale

MINIMUM CHARGE: The Session Fee

CONTRACT TERM: Effective for the period of the charging session and governing the rates, metering, and billing of the service. There is no contractual relationship between the customer and Company beyond the charging session.

WATER HEATING SERVICE RATE

AVAILABILITY OF SERVICE: Available to customers using hot water for sanitary purposes (other uses subject to the approval of the Company) and taking service under Residential and General Service Rate Schedules. This rate is also available to customers with solar assisted hot water heaters. Company approved waste heat reclamation systems and heat pump water heaters when used in conjunction with an approved electric water heater are also acceptable for use.

Available to customers who desire controlled water heating service to all of the heating elements of electric water heaters, the design and method of installation of which are approved by the Company as adapted to this service, taken through a separately metered circuit to which no other load except water heating may be connected.

HOURS OF SERVICE: 24 hours.

HOURS OF INTERRUPTION: Interruptions may be called for, but not limited to, system testing and evaluation, maintaining system integrity, making an emergency purchase, economic reasons, or when available system generation is insufficient to meet anticipated system load. A System Integrity Interruption Order may be given by the Company when the failure to interrupt will contribute to the implementation of the rules for emergency electrical procedures under Section C3. The Company will limit interruptions to intervals of no longer than 4 hours in any 24-hour period.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, nominally at 240 volts, three-wire, except that, in certain city districts, alternating current service at 208 volts, nominal, three-wire, or three-phase at the option of the Company.

RATE PER MONTH:

PRIMARY EDUCATIONAL INSTITUTION RATE

AVAILABILITY OF SERVICE: Available to Educational Institution (school, college, university) customer locations desiring service at primary, sub-transmission, or transmission voltage who contract for a specified capacity of not less than 50 kilowatts at a single location. School shall mean buildings, facilities, playing fields, or property directly or indirectly used for school purposes for children in grades kindergarten through twelve, when provided by a public or nonpublic school. School does not include instruction provided in a private residence or proprietary trade, vocational training, or occupational school. "College" or "University" shall mean buildings owned by the same customer which are located on the same campus and which constitute an integral part of such college or university facilities.

HOURS OF SERVICE: 24 hours, subject to interruption by agreement, or by advance notice.

CURRENT, PHASE AND VOLTAGE: Alternating current, three-phase, nominally at 4,800, 13,200, 24,000, 41,570 or 120,000 volts at the option of the Company.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet normal maximum requirements but not less than 50 kilowatts. The Company undertakes to provide the necessary facilities for a supply of electric power from its primary distribution system at the contract capacity. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for customers served at more than one voltage level shall be the sum of the contract capacities established for each voltage level.

in Case No. U-21297

(Continued from Sheet No. D-40.00)

RATE SCHEDULE NO. D8 (Contd.)

INTERRUPTIBLE SUPPLY RATE

NON-INTERRUPTION FEE: Customers who do not interrupt by the effective start time of a capacity deficiency order shall be billed at the cost of replacement energy plus 0.576¢ per kWh during the time of interruption plus the applicable voltage level charge, but not less than the normal D8 rate. Voltage level charges for service other than transmission voltage are:

0.185134¢ per kWh at the distribution level.

0.102074¢ per kWh at the subtransmission level.

SYSTEM INTEGRITY INTERRUPTION ORDER:

NOTICE OF SYSTEM INTEGRITY INTERRUPTION: The customer shall be provided:

- 1) Notice at least 1 hour in advance of probable interruption, whenever possible;
- 2) The time in which customer must fully reduce load; and
- 3) The estimated duration of the interruption.

The customer shall be provided notice of the actual end time for the system integrity order.

NON-INTERRUPTION PENALTY: A customer who does not fully comply with the timing and load reduction prescribed in the Notice of System Integrity Interruption shall be billed at the higher of (i) the rate of \$50 per kW applied to the highest 60-minute integrated interruptible demand (kW) created during the interruption period or (ii) the actual damages incurred by the Company, including any MISO penalties in addition to the prescribed monthly rate. In addition, the interruptible contract capacity of a customer who does not fully comply with a System Integrity interruption order may be immediately reduced by the amount the customer failed to interrupt, unless the customer demonstrates that failure to interrupt was beyond its control.

RATE SCHEDULE NO. D8 (Contd.)

INTERRUPTIBLE SUPPLY RATE

RATE PER MONTH:

Full Service Customers:

Power Supply Charges:

Capacity

Demand Charge: ~~\$5.90~~**2.29** per kW of on-peak billing demand

Voltage Level Discount:

~~\$0.25~~**10** per kW of on-peak billing demand at transmission level

~~\$0.12~~**05** per kW of on-peak billing demand at subtransmission level

Non-Capacity

Demand Charge: ~~\$3.94~~**3.43** per kW of on-peak billing demand

Voltage Level Discount:

~~\$0.16~~**14** per kW of on-peak billing demand at transmission level

~~\$0.07~~**06** per kW of on-peak billing demand at subtransmission level

Energy Charge: ~~4.14~~**5.44**¢ per kWh for all on-peak kWh

~~3.14~~**4.44**¢ per kWh for all off-peak kWh

Voltage Level Discount:

~~0.13~~**41**¢ per kWh at transmission level

~~0.06~~**08**¢ per kWh at subtransmission level

Delivery Charges:

Primary Service Charge: \$70 per month

Subtransmission and Transmission Service Charge: \$375 per month

Distribution Charges:

For primary service (less than 24 kV) ~~\$5.33~~**6.47** per kW of maximum demand.

For service at subtransmission voltage (24 to 41.6 kV) ~~\$2.21~~**2.03** per kW of maximum demand.

For service at transmission voltage (120 kV and above) ~~\$0.93~~**89** per kW of maximum demand.

RATE SCHEDULE NO. D8 (Contd.)

INTERRUPTIBLE SUPPLY RATE

Substation Credit: Available to customers where service at sub-transmission voltage level (24 to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of \$0.30 per kW of maximum demand shall be applied to the maximum demand charge. A credit of 0.040¢ per kWh shall be applied to the energy charge where the service is metered on the primary side of the transformer.

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8.

Retail Access Service customers:

Capacity (only applicable to Retail Access Service Customers receiving Utility Capacity Service from DTE Electric)

Demand Charge: ~~\$5.90~~**2.29** per kW of on-peak billing demand

Voltage Level Discount:

~~\$0.25~~**10** per kW of on-peak billing demand at transmission level

~~\$0.12~~**05** per kW of on-peak billing demand at subtransmission level

Capacity related surcharges and credits applicable to power supply, excluding PSCR, as approved by the Commission. See Section C8.5.

Delivery Charges:

Primary Service Charge: \$70 per month

Subtransmission and Transmission Service Charge: \$375 per month

Distribution Charges:

For primary service (less than 24 kV) ~~\$5.33~~**6.47** per kW of maximum demand.

For service at subtransmission voltage (24 to 41.6 kV) ~~\$2.21~~**03** per kW of maximum demand.

For service at transmission voltage (120 kV and above) ~~\$0.93~~**89** per kW of maximum demand.

Substation Credit: Available to customers where service at sub-transmission voltage level (24 to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of \$.30 per kW of maximum demand shall be applied to the maximum demand charge. A credit of .040¢ per kWh shall be applied to the energy charge where the service is metered on the primary side of the transformer.

Surcharges and Credits: As approved by the Commission. See Section C9.8.

LATE PAYMENT CHARGE: See Section C4.8.

DEFINITION OF CUSTOMER VOLTAGE LEVEL: See Section C13.

MONTHLY ON-PEAK BILLING DEMAND: The monthly on-peak billing demand shall be the single highest 30-minute integrated reading of the demand meter during the on-peak hours of the billing period. In no event will the monthly on-peak billing demand be less than 65% of the highest monthly on-peak metered billing demand during the billing months of June, July, August, September, and October of the preceding eleven billing months, nor less than 50 kilowatts.

RATE SCHEDULE NO. D9

OUTDOOR PROTECTIVE LIGHTING

SPECIAL TERMS AND CONDITIONS (contd.):

The stated charges for underground service on Sheet No. D-46.00 cover the ordinary trenching for cable extensions under normal soil conditions in cleared areas.

- (1) Special purpose facilities are considered to be line or cable extensions, transformers, and any additional poles without lights, excluding facilities provided under stated charges on Sheet No. D-45.00. Where special purpose facilities are required, a service charge of 18% per year on the investment in such facilities will be billed in installments as an addition to the regular rate for each light. In the event the customer discontinues service before the end of the contract term, the established rate as well as the service charge on special purpose facilities for the remaining portion of the contract term shall immediately become due and payable. This provision was closed to new installations as of January 22, 1994.
- (2) For new installations after January 22, 1994, which require investment in excess of three times the annual revenue, this rate is available only to customers who make a contribution in aid of construction equal to the amount by which the investment exceeds three times the annual revenue at the prevailing rate at the time of installation.
- (3) For new underground-fed installations of 5 lights or more after May 1, 2019, which require investment in excess of three times the annual revenue, the customer may elect to pay a post charge for each increment of \$1,000 investment required above three times the annual revenue.
- (4) As an alternative, where the required contribution exceeds \$10,000, upon agreement of the customer and the Company, the customer will pay an additional annual charge of the Company's weighted average cost of capital (~~7.11679~~%) times the contribution amount in lieu of the cash contribution.

DE-ENERGIZED LIGHTS: Customers may elect to have any or all luminaires served under this rate disconnected. The charge per luminaire per year, payable in equal monthly installments, shall be 60% of the regular yearly rates. A \$35.00 charge per luminaire will be made at the time of de-energization and at the time of re-energization.

DUSK TO MIDNIGHT SERVICE: For service to parking lots from dusk to approximately twelve o'clock midnight E.S.T., a **distribution** discount of 1.060¢ per nominal lamp size wattage per month and a 50% reduction in the average monthly hours of use will be applied. One control per circuit or luminaire will be provided.

EXPERIMENTAL PROGRAMMABLE PHOTOCELL SERVICE: Customers may elect to place luminaires on photocells that are programmable to turn off lights at pre-determined times during the night. A distribution discount of 1.060¢ per nominal lamp size wattage per month and a 50% reduction in the average monthly hours of use will be applied.

MONTHLY RATES: Overhead Outdoor Protective Lighting with Existing Pole and Existing Secondary Facilities (All-night service).

Power Supply Charges:

Capacity Energy Charge:	0.00¢ per kWh for all kWh
Non-Capacity Energy Charge:	4.7638 ¢ per kWh for all kWh

For installations prior to January 22, 1994. New Pole and Single Span of Secondary Facilities. The above rate plus \$24.48 per pole per year.

Effective January 22, 1994 installation requiring additional facilities shall pay a contribution in aid of construction in lieu of the service charge. Contribution is described in paragraph (2) above.

Multiple Lamps on a Single Pole. For each additional luminaire added to the same pole the charge will be at the existing pole rate.

The Energy Policy Act of 2005 states that no Mercury Vapor lamp ballasts may be manufactured or imported after January 1, 2008. As a result, effective January 1, 2008, new Mercury Vapor lamps will no longer be available. Customers with existing Mercury Vapor lamp ballasts will continue to receive service until those fixtures fail. At that time, the luminaire will be converted to LED.

MONTHLY RATES: Underground Outdoor Protective Lighting with Lamp Spacing up to 120 Feet (All-night service).

Power Supply Charges:

Capacity Energy Charge: 0.00¢ per kWh for all kWh

Non-Capacity Energy Charge: ~~4.7638~~¢ per kWh for all kWh

Effective January 22, 1994 installation requiring additional facilities shall pay a contribution in aid of construction in lieu of the service charge. Contribution is described in paragraph (2) above.

Effective May 1, 2019, installations requiring additional facilities shall pay a post charge of ~~\$6.8862~~ per increment of \$1,000 of expense in lieu of contribution in aid of construction. Contribution is described in paragraph (3) above.

Long Span

- For lamp spacing over 120 feet up to 325 feet on the same side of street, add to rate per lamp per year \$24.48

Semi-Ornamental

- For Semi-Ornamental Systems which employ Ornamental Post Units served from overhead conductors, where such construction is practical, reduce rate per luminaire per year \$21.48

Multiple Luminaires on a Single Pole

- For additional luminaires added to the same pole, a reduced rate per luminaire per year on the added luminaire.
Ornamental \$97.92
Ornamental-Lamp spacing over 120 feet \$122.40
Semi-Ornamental \$76.56

The Energy Policy Act of 2005 states that no Mercury Vapor lamp ballasts may be manufactured or imported after January 1, 2008. As a result, effective January 1, 2008, new Mercury Vapor lamps will no longer be available. Customers with existing Mercury Vapor lamp ballasts will continue to receive service until those luminaires fail. At that time, the luminaire will be converted to LED.

RATE SCHEDULE NO. D10

ALL-ELECTRIC SCHOOL BUILDING SERVICE RATE

AVAILABILITY OF SERVICE: Available to customers desiring service in school buildings served at primary voltage who contract for a specified installed capacity of not less than 50 kilowatts at a single location provided the space heating and water heating for all or a substantial portion of the premises is supplied by electric service and is installed on a permanent basis.

HOURS OF SERVICE: 24 hours, subject to interruption by agreement, or by advance notice.

CURRENT, PHASE AND VOLTAGE: Alternating current, three-phase, nominally at 4,800 or 13,200 volts at the option of the Company.

RATE PER MONTH:

Full Service Customers:

Power Supply Charges:

Capacity

Energy Charge (June through October): ~~4.396~~2.445¢ per kWh for all kWh

Energy Charge (November through May): ~~2.383~~0.432¢ per kWh for all kWh

Non-Capacity

Energy Charge (June through October): ~~4.893~~7.452¢ per kWh for all kWh

Energy Charge (November through May): ~~4.893~~7.452¢ per kWh for all kWh

Delivery Charges:

Service Charge: \$70 per month

Distribution Charge: ~~1.738~~2.070¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8.

Retail Access Service Customers:

Capacity (Only applicable to Retail Access Service Customers receiving Utility Capacity Service from DTE Electric)

Energy Charge (June through October): ~~4.396~~2.445¢ per kWh for all kWh

Energy Charge (November through May): ~~2.383~~0.432¢ per kWh for all kWh

Capacity related surcharges and credits applicable to power supply, excluding PSCR, as approved by the Commission. See Section C8.5.

Delivery Charges:

Service Charge: \$70 per month

Distribution Charge: ~~1.738~~2.070¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Section C9.8.

RATE SCHEDULE NO. D11

PRIMARY SUPPLY RATE

AVAILABILITY OF SERVICE: Available to customers desiring service at primary, sub-transmission, or transmission voltage who contract for a specified capacity of not less than 50 kilowatts at a single location.

HOURS OF SERVICE: 24 hours, subject to interruption by agreement, or by advance notice.

CURRENT, PHASE AND VOLTAGE: Alternating current, three-phase, nominally at 4,800, 13,200, 24,000, 41,570 or 120,000 volts at the option of the Company.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet normal maximum requirements but not less than 50 kilowatts. The Company undertakes to provide the necessary facilities for a supply of electric power from its primary distribution system at the contract capacity. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for customers served at more than one voltage level shall be the sum of the contract capacities established for each voltage level.

RATE PER MONTH:

Full Service Customers:

Power Supply Charges:

Capacity

Demand Charge: ~~\$13.18~~ **5.03** per kW of on-peak billing demand

Voltage Level Discount:

~~\$0.56~~ **21** per kW of on-peak billing demand at transmission level

~~\$0.27~~ **10** per kW of on-peak billing demand at subtransmission level

Non-Capacity

Demand Charge: ~~\$3.23~~ **7.07** per kW of on-peak billing demand

Voltage Level Discount:

~~\$0.13~~ **28** per kW of on-peak billing demand at transmission level

~~\$0.06~~ **13** per kW of on-peak billing demand at subtransmission level

Energy Charge: ~~4.1485~~ **4.41**¢ per kWh for all on-peak kWh

~~3.1484~~ **4.41**¢ per kWh for all off-peak kWh

Voltage Level Discount:

~~0.134185~~¢ per kWh at transmission level

~~0.06083~~¢ per kWh at subtransmission level

Delivery Charges:

Primary Service Charge: \$70 per month

Subtransmission and Transmission Service Charge: \$375 per month

Distribution Charges:

For primary service (less than 24 kV) ~~\$5.33~~ **6.47** per kW of maximum demand.

For service at subtransmission voltage (24 to 41.6 kV) ~~\$2.21~~ **03** per kW of maximum demand.

For service at transmission voltage (120 kV and above) ~~\$0.93~~ **89** per kW of maximum demand.

RATE SCHEDULE NO. D11 (Contd.)

PRIMARY SUPPLY RATE

Substation Credit: Available to customers where service at sub-transmission voltage level (24 to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of \$0.30 per kW of maximum demand shall be applied to the maximum demand charge. A credit of 0.040¢ per kWh shall be applied to the energy charge where the service is metered on the primary side of the transformer.

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8.

Retail Access Service Customers:

Capacity (Only applicable to Retail Access Service Customers receiving Utility Capacity Service from DTE Electric)

Demand Charge: ~~\$13.18~~**5.03** per kW of on-peak billing demand

Voltage Level Discount:

~~\$0.56~~**21** per kW of on-peak billing demand at transmission level

~~\$0.27~~**10** per kW of on-peak billing demand at subtransmission level

Capacity related surcharges and credits applicable to power supply, excluding PSCR, as approved by the Commission. See Section C5.8.

Delivery Charges:

Primary Service Charge: \$70 per month

Subtransmission and Transmission Service Charge: \$375 per month

Distribution Charges:

For primary service (less than 24 kV) ~~\$5.33~~**6.47** per kW of maximum demand.

For service at subtransmission voltage (24 to 41.6 kV) ~~\$2.21~~**03** per kW of maximum demand.

For service at transmission voltage (120 kV and above) ~~\$0.93~~**89** per kW of maximum demand.

Substation Credit: Available to customers where service at sub-transmission voltage level (24 to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of \$0.30 per kW of maximum demand shall be applied to the maximum demand charge. A credit of 0.040¢ per kWh shall be applied to the energy charge where the service is metered on the primary side of the transformer.

Surcharges and Credits: As approved by the Commission. See Section C9.8.

LATE PAYMENT CHARGE: See Section C4.8.

DEFINITION OF CUSTOMER VOLTAGE LEVEL: See Section C13.

MONTHLY ON-PEAK BILLING DEMAND: The monthly on-peak billing demand shall be the single highest 30-minute integrated reading of the demand meter during the on-peak hours of the billing period. The monthly on-peak billing demand will not be less than 65% of the highest monthly on-peak metered billing demand during

RATE SCHEDULE NO. D12

**EXPERIMENTAL LARGE CUSTOMER
LOW PEAK DEMAND SUPPLY RATE**

AVAILABILITY OF SERVICE: Available on an experimental basis to new full-service customers with a minimum metered contract capacity of 10,000 kW and with high on-peak demands set during the October through May billing months and on-peak demands of ten percent (10%) or less during the June through September billing months and taking service at sub-transmission, or transmission voltage at a single location. Total contracted capacity on this tariff is limited to 100 MW. Service under this tariff may not be combined with any other tariff, rider, or separately metered service except for Rider Nos. 17 or 19.

HOURS OF SERVICE: 24 hours, subject to interruption by agreement, or by advance notice.

CURRENT, PHASE AND VOLTAGE: Alternating current, three-phase, nominally at 24,000, 41,570 or 120,000 volts at the option of the Company.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet normal maximum requirements but not less than 10,000 kilowatts. The Company undertakes to provide the necessary facilities for a supply of electric power from its primary distribution system at the contract capacity. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for customers served at more than one voltage level shall be the sum of the contract capacities established for each voltage level.

RATE PER MONTH:

RATE SCHEDULE NO. D13

XL HIGH LOAD FACTOR RATE

AVAILABILITY OF SERVICE: Available to customers desiring service at primary, sub-transmission, or transmission voltage who contract for a specified capacity of not less than 50,000 kilowatts, which may be located at one or more sites within the Company's electric service territory. The customer's load must reflect the following characteristics:

- 1) The contract capacity under this schedule must be new and incremental. Existing ("baseline") usage will remain eligible for service under any other rate schedule or rider for which it qualifies. The required incremental contracted capacity must be in service within four years of initially taking service under this rate.
- 2) Service taken by the customer must be at a load factor of no less than 75% for the capacity contracted under this rate. The required incremental load factor must be demonstrated in the twelve months following achievement of the contracted capacity described in (1) and maintained for the duration of service on this rate.
- 3) Any customer site taking service under this rate shall require separately metered circuits for such service.
- 4) Any customer failing to meet the incremental contract capacity and load factor requirement will be removed from this rate and placed on an eligible rate of the customer's choosing.
- 5) The rate is available at the discretion of the Company.

HOURS OF SERVICE: 24 hours, subject to interruption by agreement, or by advance notice.

CURRENT, PHASE AND VOLTAGE: Alternating current, three-phase, nominally at 4,800, 13,200, 24,000, 41,570 or 120,000 volts at the option of the Company.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in megawatts sufficient to meet normal maximum requirements but not less than 50,000 kilowatts. The customer may not exceed the contract capacity by more than 5%. Demand in excess of 105% of contract capacity will be placed on Rate Schedule No. D11, or any other eligible rate at the election of the customer. At the Company's discretion, it may offer to increase contract capacity on this rate without effect on the term of the contract. The contract capacity for customers served at more than one voltage level at one site shall be the sum of the contract capacities established for each voltage level.

The contract capacity, however established, shall not be decreased during the term of the contract except by mutual consent, and in no event may a decrease in contract capacity result in less than the minimum required capacity or load factor.

RATES:

Power Supply Charges for all service voltages

Capacity	\$15.14 / MWh
Non-Capacity	\$23.79 \$34.30 / MWh
Transmission	\$2.31 \$3.04 / MWh

Delivery Charge

Primary Service Charge	\$70 per meter/month
Subtransmission and Transmission Service Charge	\$375 per meter/month

Detroit, Michigan

Effective for service rendered on
and after _____, 2023

Issued under authority of the
Michigan Public Service Commission
dated _____, 2023
in Case No. U-21297

(Continued from Sheet No. D-48.08)

RATE SCHEDULE NO. D13 (contd.)

XL HIGH LOAD FACTOR RATE

RATES (contd.):

Distribution Charges

For primary service (less than 24 kV)	\$7.70 9.84 / MWh
For service at sub-transmission voltage (24 to 41.6 kV)	\$3.01 08 / MWh
For service at transmission voltage (120 kV and above)	\$1.28 36 / MWh

Substation Credit: Available to customers where service at sub-transmission voltage level (24 to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of \$0.55 per MWh shall be applied to the contracted load on this rate. A credit of \$0.40 per MWh shall be applied to the energy charge where the service is metered on the primary side of the transformer.

Administration Charge

Administration \$0.15 / MWh

Surcharges and Credits: Customers are subject to surcharges as approved by the Commission. Customers taking service on this rate are not subject to the Power Supply Cost Recovery (PSCR) factor, the Nuclear Surcharge, or the Transitional Reconciliation Mechanism. Customers taking service on this rate will be subject to an adjustment to reconcile projected and actual power supply non-capacity and transmission costs.

Other: The power supply capacity charge shall remain fixed for the term of the contract

BASELINE USAGE: Baseline usage is the Customer's existing contracted capacity at the time of taking service on D13. The Company reserves the right to define baseline usage based on exceptional circumstances as appropriate. Baseline usage may be served on any eligible rate schedule or rider, and it may in the future take service under any eligible rate or rider. No capacity or energy defined as baseline is eligible for service under this rate schedule and no capacity or energy may be moved from a baseline usage circuit to a circuit served under this rate.

DEFINITION OF LOAD FACTOR: For the purposes of this rate schedule Load Factor is defined on an annual basis. It is calculated as:

(Total MWh of usage in year / (incremental contract capacity in MW*hours in year))

POWER FACTOR CLAUSE: The rates and charges under this tariff are based on the customer maintaining a power factor of not less than 85% lagging. Any power factor less than 70% will not be permitted and the customer will be required to install at his own expense such corrective equipment as may be necessary to improve power factor. A penalty will be applied to the total amount of the monthly billing for electric energy for power factor below 85% lagging in accordance with the table in Power Factor Determination, Section C12. The Power Factor Clause will be applied to metered quantities.

(Continued from Sheet No. D-49.00)

RATE SCHEDULE NO. E1 (Contd.)

MUNICIPAL STREET LIGHTING RATE

CONTRACT TERM: Minimum 5 year term. Upon expiration of the initial term shall continue on a month-to-month basis until terminated by mutual written consent of the parties or by either party with thirty (30) days prior written notice to the other party. Any conversion, relocation and/or removal of existing street lighting facilities at the customer's request, including those removals necessitated by termination of service, must be paid for by the customer. The detailed provisions and schedule of charges, which may include the remaining value of the existing facilities, will be quoted upon request. The Company shall not withdraw service, and the municipality shall not substitute another source of service in whole or in part, without twelve months' written notice to the other party.

Option I: Company Owned Street Lighting System

Where new installations require an investment in excess of an investment allowance, Option I is available only to customers who make a contribution in aid of construction equal to the amount by which the investment exceeds three times the annual revenue at the prevailing rate at the time of installation. (Effective January 1, 1991, the investment amount will be limited to direct cost. Effective January 1, 1992, the investment amount will include full cost.)

As an alternative, where the required contribution exceeds \$10,000, upon agreement of the customer and the Company, the customer will pay an additional annual charge of the Company's weighted average cost of capital (~~7.11679~~%) times the contribution amount in lieu of the cash contribution.

For new underground-fed installations of 5 lights or more after May 1, 2019, which require investment in excess of three times the annual revenue at the prevailing rate at the time of installation, the customer may elect to pay a post charge for each increment of \$1,000 investment required above three times the annual revenue.

DE-ENERGIZED LIGHTS: Customers may elect to have any or all luminaires served under this rate disconnected. The charge per luminaire per year, payable in equal monthly installments, shall be 60% of the regular yearly rates. A \$35.00 charge per luminaire will be made at the time of de-energization and at the time of re-energization.

DUSK TO MIDNIGHT SERVICE: For service to parking lots from dusk to approximately twelve o'clock midnight E.S.T., a *distribution* discount of 1.060¢ per nominal lamp size wattage per month and a 50% reduction in the average monthly hours of use will be applied. One control per circuit or luminaire will be provided.

EXPERIMENTAL PROGRAMMABLE PHOTOCCELL SERVICE: Customers may elect to place luminaires on photocells that are programmable to turn off lights at pre-determined times during the night. A distribution discount of 1.060¢ per nominal lamp size wattage per month and a 50% reduction in the average monthly hours on use will be applied.

MONTHLY RATES OPTION I: Overhead Municipal Street Lighting (All-night service).

Power Supply Charges:

Capacity Energy Charge: 0.00¢ per kWh for all kWh

Non-Capacity Energy Charge: ~~4.7638~~¢ per kWh for all kWh

Multiple Lamps on a Single Pole

- For each additional luminaire added to the same pole, reduce rate per lamp per year on the added luminaire \$12.24.

The Energy Policy Act of 2005 states that no Mercury Vapor lamp ballasts may be manufactured or imported after January 1, 2008. As a result, effective January 1, 2008, new Mercury Vapor lamps will no longer be available. Customers with existing Mercury Vapor lamp ballasts will continue to receive service until those luminaires fail. At that time, the luminaire will be converted to LED.

- The Energy Policy Act of 2005 states that no Mercury Vapor lamp ballasts may be manufactured or imported after January 1, 2008. As a result, effective January 1, 2008, new Mercury Vapor lamps will no longer be available. Customers with existing Mercury Vapor lamp ballasts will continue to receive service until those luminaires fail. At that time, customers will be given the option of switching to High Pressure Sodium, Metal Halide, LED or retiring the Luminaire.

(Continued from Sheet No. D-52.00)

RATE SCHEDULE NO. E1 (Contd.)

MUNICIPAL STREET LIGHTING RATE

- **DE-ENERGIZED LIGHTS:** Customers may elect to have any or all luminaires served under this rate disconnected. The charge per luminaire per year, payable in equal monthly installments, shall be 10% of the above yearly rates. A \$35.00 charge per luminaire will be made at the time of de-energization and at the time of re-energization.
- **DUSK TO MIDNIGHT SERVICE:** For service to parking lots from dusk to approximately twelve o'clock midnight E.S.T., a discount of 1.060¢ per nominal watt per month will be applied. One control per circuit will be provided.

OPTION III: Municipally Owned and Maintained Street Lighting System (Unmetered)

HOURS OF SERVICE: For circuits controlled by automatic timing devices, one-half hour after sunset until one-half hour before sunrise. For circuits controlled by photo-sensitive devices, dusk to dawn for approximately 4,200 hours per year.

RATES: Where the municipality owns, operates, cleans and renews the lamps, and the Company's service is confined solely to the supply of electricity from dusk to dawn, the monthly charge of said service shall be a power supply capacity energy charge of 0.00¢ per kilowatthour, a power supply non-capacity charge of ~~4.7638¢~~ per kilowatthour and a distribution charge of ~~11.730-02¢~~ per kilowatthour. If it is necessary for the Company to install facilities to provide service for the lamps, the customer will reimburse the Company for these costs. Contract Rider No. 2 charges will also apply.

OPTION III: Municipally Owned and Maintained Street Lighting System (Controlled/Metered)

AVAILABILITY OF SERVICE: Available to governmental agencies desiring controlled nighttime service for primary or secondary voltage energy-only street lighting service where the Company has existing distribution lines available for supplying energy for such service. Luminaires served under any of the Company's other street lighting rates shall not be intermixed with luminaires serviced under this street lighting rate. This rate is not available for resale purposes. Service is governed by the Company's Standard Rules and Regulations.

KIND OF SERVICE:

Secondary Voltage Service: Alternating current, 60 hertz, single-phase 120/240 nominal volt service for a minimum of ten luminaires located within a clearly defined area. Except for control equipment, the customer will furnish, install, own and maintain all equipment comprising the street lighting system up to the point of attachment with the Company's distribution system. The Company will connect the customer's equipment to the Company's lines and supply the energy for operation. All of the customer's equipment will be subject to the Company's review.

Primary Voltage Service: Alternating current, 60 hertz, single-phase or three-phase, primary voltage service for actual demands of not less than 100 kW at each point of delivery. The particular nature of the voltage shall be determined by the Company. The customer will furnish, install, own and maintain all equipment comprising the street lighting system, including control equipment, up to the point of attachment with the Company's distribution system. The Company will supply the energy for operation of the customer's street lighting system.

RATE SCHEDULE NO. E1 (Contd.)

MUNICIPAL STREET LIGHTING RATE

**Primary and Secondary Energy
Full Service Customers:**

Power Supply Charge:

Capacity Dusk to Midnight: 4.268¢ per kWh

Capacity Energy Charge: ~~0.9772-603~~¢ per kWh for all **other** kWh

Non-Capacity Energy Charge: ~~4.8532-835~~¢ per kWh for all kWh

Delivery System Charge:

~~5.1834-320~~¢ per kWh based on the capacity requirements in kilowatts of the equipment assuming 4,200 burning hours per year, adjusted by the ratio of the monthly kWh consumption to the total annual kWh consumption.

Retail Access Service Customers:

Power Supply Charges for Retail Access Service Customers taking Utility Capacity Service from DTE:

Capacity Energy Charge: ~~0.9772-603~~¢ per kWh for all kWh

Delivery System Charge:

~~5.1834-320~~¢ per kWh based on the capacity requirements in kilowatts of the equipment assuming 4,200 burning hours per year, adjusted by the ratio of the monthly kWh consumption and the total annual kWh consumption.

At the Company's option, service may be metered and the metered kWh will be the basis for billing. Capacity requirements of lighting equipment shall be determined by the Company from manufacturer specifications, but the Company maintains the right to test such capacity requirements from time to time. In the event that Company tests show capacity requirements other than those indicated in manufacturer specifications, the capacity requirements indicated by Company tests will be used. The customer shall not change the capacity requirements of its equipment without first notifying the Company in writing.

BILLING: Billing will be on a monthly basis.

SURCHARGES AND CREDITS: As approved by the Commission. Power Supply Charges are subject to Section C8.5. Delivery Charges are subject to Section C9.8.

LATE PAYMENT CHARGE: See Section C4.8.

MINIMUM CHARGE: The contract minimum.

CONTRACT TERM: Contracts will be taken for a minimum of two years, extending thereafter from year to year until terminated by mutual consent or upon 12 months' written notice by either party.

RATE SCHEDULE NO. E2

TRAFFIC AND SIGNAL LIGHTS

AVAILABILITY OF SERVICE: Available to municipalities or other public authorities, hereinafter referred to as customer, operating lights for traffic regulation or signal lights on streets, highways, airports or water routes, as distinguished from street lighting. Customers desiring service under Rate Schedule No. E2 are free to determine the appropriate light source for their application including incumbent and emerging technologies (including LEDs). Customers must supply adequate documentation of the wattage of the light source that will be subject to the approval of the Company.

HOURS OF SERVICE: 24 hours.

CURRENT, PHASE AND VOLTAGE: Alternating current, single-phase, at 120 volts two-wire.

SERVICE CONNECTIONS: The customer is to furnish and maintain all necessary wiring and equipment, including lamps and lamp replacements, or reimburse the Company therefore, except that the Company will furnish, install and maintain such span poles and messenger cable as may be needed to support the traffic or signal lights of the overhead type. Connections are to be brought to the Company's underground and overhead lighting mains by the customer as directed by the Company, and the final connection to the Company's main is to be made by the Company.

Conversion and/or relocation of existing facilities must be paid for by the customer, except when initiated by the Company. The detailed provisions and schedule of such charges will be quoted upon request.

RATES: Distribution charge of ~~2.6142¢~~, capacity energy charge of ~~0.79225¢~~ and non-capacity energy charge of ~~5.8744¢~~ per month per kilowatthour of the total connected traffic light or signal light load in service for each customer.

Total connected wattage will be reckoned as of the fifteenth of the month. Lamps removed from service before the fifteenth or placed in service on or after the fifteenth will be omitted from the reckoning; conversely, lamps placed in service on or before the fifteenth of the month or removed from service after the fifteenth of the month will be reckoned for a full month. Lamps operated cyclically, on and off, will be reckoned at one-half wattage and billed for a full month. No such reduction of reckoned wattage will be allowed for lamps in service but turned off during certain hours of the day.

The Company may, at its option, install meters and apply a standard metered rate schedule applicable to the service.

SURCHARGES AND CREDITS: As approved by the Commission. See Sections C8.5 and C9.8.

LATE PAYMENT CHARGE: See Section C4.8.

MINIMUM CHARGE: \$3.00 per customer per month.

CONTRACT TERM: Open order on a month-to-month basis. However, the Company shall not withdraw service, and the customer shall not substitute another source of service in whole or in part, without twelve months' written notice to the other party.

STANDARD CONTRACT RIDER NO. 1.1 (Contd.)

ALTERNATIVE ELECTRIC METAL MELTING

For service at subtransmission voltage level (24 kV to 41.6 kV)
~~0.638701¢~~ per kWh for the first 100 hours use of maximum demand
~~0.638701¢~~ per kWh for the excess

For service at transmission voltage level (120 kV and above)
~~0.204283¢~~ per kWh for the first 100 hours use of maximum demand
~~0.204283¢~~ per kWh for the excess

Substation Credit: Available to customers where service at sub-transmission voltage (24 kV to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

Surcharges and Credits: As approved by the Commission. See Section C9.8.

LATE PAYMENT CHARGE: See Section C4.8.

MAXIMUM DEMAND: The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

MINIMUM CHARGES: 1) A monthly minimum charge of \$2.10 per kW of contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$2.10 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates, plus; 2) any applicable per meter per month surcharges.

POWER FACTOR CLAUSE (Retail Access Service Customers Only): A power factor of less than 70% is not permitted and necessary corrective equipment must be installed by the Customer to correct to a minimum level of 70%. Power factor and excess Reactive Demand charges will be calculated at each Customer location at the time of the Location's single highest 30-minute integrated kW reading of the Interval Demand Meter during the on-peak hours of the billing period, which are those hours from 7 a.m. until 11 p.m. consistent with the ITC Open Access Transmission Tariff. Excess Reactive Demand is any Reactive Demand resulting from operations below 80% power factor. A monthly charge of \$3.50/kVAR will be applied to excess Reactive Demand.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: One year under written contract and month-to-month thereafter.

STANDARD CONTRACT RIDER NO. 1.2 (Contd.)

ELECTRIC PROCESS HEAT

For service at subtransmission voltage level (24 kV to 41.6 kV)
~~0.638701¢~~ per kWh for the first 100 hours use of maximum demand
~~0.638701¢~~ per kWh for the excess

For service at transmission voltage level (120 kV and above)
~~0.204283¢~~ per kWh for the first 100 hours use of maximum demand
~~0.204283¢~~ per kWh for the excess

Substation Credit: Available to customers where service at sub-transmission voltage (24 kV to 41.6 kV) or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of 0.3¢/kWh will be applied to the energy use associated with the first 100 hours use of maximum demand.

Surcharges and Credits: As approved by the Commission. See Section C9.8.

LATE PAYMENT CHARGE: See Section C4.8.

MAXIMUM DEMANDS: The maximum demand shall be the highest 30-minute integrated demand created during the current billing month. This clause is applicable to each voltage level served.

MINIMUM CHARGES: 1) A monthly minimum charge of \$2.10 per kW of contract capacity shall be applied to that portion of the customer's load which is served under this rider. This minimum charge will be waived if the customer over the past 12 months (including the current bill), or from the start of the contract term if less than 12 months, has averaged \$2.10 per kW per month in revenues. This minimum charge is in addition to the minimum charge under the above rates, plus; 2) any applicable per meter per month surcharges.

POWER FACTOR CLAUSE (Retail Access Service Customers Only): A power factor of less than 70% is not permitted and necessary corrective equipment must be installed by the Customer to correct to a minimum level of 70%. Power factor and excess Reactive Demand charges will be calculated at each Customer location at the time of the Location's single highest 30-minute integrated kW reading of the Interval Demand Meter during the on-peak hours of the billing period, which are those hours from 7 a.m. until 11 p.m. consistent with the ITC Open Access Transmission Tariff. Excess Reactive Demand is any Reactive Demand resulting from operations below 80% power factor. A monthly charge of \$3.50/kVAR will be applied to excess Reactive Demand.

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the normal maximum requirements of the load qualifying for service under this rider. Any single reading of the demand meter in any month that exceeds the contract capacity then in effect shall become the new contract capacity. The contract capacity for this rider shall not be included in the contract capacity established for the filed rate which is used in conjunction with this rider.

SPECIAL TERMS AND CONDITIONS: The customer is responsible for all new facilities and lines required for service under this rider. Said facilities and lines must meet all Company standards. The Company at its option may install and own said facilities under the provisions of Standard Contract Rider No. 2.

TERM: One year under written contract and month-to-month thereafter.

in Case No. U-21297

(Continued from Sheet No. D-70.00)

**STANDARD CONTRACT RIDER NO. 3 (Contd.) PARALLEL OPERATION AND STANDBY SERVICE AND
STATION POWER STANDBY SERVICE**

DEFINITIONS (contd):

MAINTENANCE PERIODS (contd):

- (e) If there is a substantial change in circumstances which make the agreed upon schedule impractical for either party, the other party upon request shall make reasonable efforts to adjust the schedule in a manner that is mutually agreeable.

WAIVERS AND LIMITS FOR GENERATION RESERVATION FEE AND DAILY DEMAND CHARGES:

For customers taking supplemental service on rate schedules D4, D11, D6.2 or D8, the following waivers apply:

If the total of daily demand charges for the month is less than the monthly generation reservation fee, then the daily demand charges will be waived for that month.

If the total of daily demand charges for the month is greater than the monthly generation reservation fee, then the generation reservation fee will be waived for that month.

Waivers and limits for energy-only rates:

For customers taking supplemental service on energy-only rates for the entire billing cycle, schedules D3, or D3.3, the following applies.

If the total of daily demand charges for the month is less than the monthly generation reservation fee, then the daily demand charges will be waived for that month.

If the total of daily demand charges for the month is greater than the monthly generation reservation fee, then the daily demand charges will be waived for that month provided that the supplemental rate continues as an energy-only rate. If not, then the total of daily demand charges for the month will be charged and the generation reservation fee for the month will be waived..

RATES:

Power Supply Charges:

Capacity

Monthly Generation Reservation Fee:

\$0.~~48~~¹⁸ times the standby contract capacity in kW, per month.

The daily on-peak backup demand charge is \$~~1.32~~^{0.50} per kW per day during periods other than maintenance periods as defined below.

The daily on-peak backup demand charge is \$~~0.66~~^{0.25} per kW per day during maintenance periods as defined below.

**STANDARD CONTRACT RIDER NO. 3 (Contd.) PARALLEL OPERATION AND STANDBY SERVICE AND
STATION POWER STANDBY SERVICE**

RATES (contd):

Energy Charge:

For customers served on supplemental rate schedules D3, D3.2 and D3.3, the energy charge will be the applicable power supply energy charge specified in the customer's supplemental rate.

The energy as stated herein, is also subject to provisions of the PSCR clause and other Surcharges and Credits Applicable to Power Supply as approved by the Commission. See Section C8.5.

Non-Capacity

Monthly Generation Reservation Fee:

\$0.~~12~~²⁶ times the standby contract capacity in kW, per month.

The daily on-peak backup demand charge is \$0.~~32~~⁷¹ per kW per day during periods other than maintenance periods as defined below.

The daily on-peak backup demand charge is \$0.~~16~~³⁵ per kW per day during maintenance periods as defined below.

Energy Charge:

An energy charge for back-up and maintenance power will be charged based on standby contract capacity less the output toward internal load of the customer's generator, but not less than zero. For customers served on supplemental rate schedules D4, D11, D6.2 and D8, the energy charge will be ~~4.7406.075¢~~ per kWh, plus appropriate power supply credits, including but not limited to an off-peak credit of 1.00¢ per kWh, and voltage level credits of 0.~~08360¢~~ per kWh for subtransmission and 0.~~18534¢~~ per kWh for transmission. For customers served on supplemental rate schedules D3, D3.2 and D3.3, the energy charge will be the applicable power supply energy charge specified in the customer's supplemental rate.

The energy as stated herein, is also subject to provisions of the PSCR clause and other Surcharges and Credits Applicable to Power Supply as approved by the Commission. See Section C8.5.

Delivery Charges:

Service Charge:

\$70 per customer per month for customers served at primary voltage.

\$375 per customer per month for customers served above primary voltage.

\$70 per customer per month for customers served at secondary voltages.

Distribution Charge:

Distribution charges will be as follows:

~~\$5.336.47~~ per kW at primary voltage applied to the standby contract capacity

~~\$2.21-03~~ per kW at subtransmission voltage applied to the standby contract capacity

~~\$0.93-89~~ per kW at transmission voltage applied to the standby contract capacity

in Case No. U-21297

(Continued from Sheet No. D-72.00)

**STANDARD CONTRACT RIDER NO. 3 (Contd.) PARALLEL OPERATION AND STANDBY SERVICE AND
STATION POWER STANDBY SERVICE**

RATES (contd):

Distribution Charge:

For service provided in conjunction with a secondary voltage base rate the Delivery Charge will be the greater of ~~\$10.80~~**2.96** per kW applied to standby contract capacity or ~~4.32~~**5.183¢**/kWh applied to all standby energy delivered.

Substation Credit: Available to customers served at subtransmission voltage level (24 to 41.6 kW) or higher who provide the on-site substation including all necessary transforming, controlling, and protective equipment. A credit of \$.30 per kW shall be applied to the distribution demand charge per kW of standby capacity. An additional credit of 0.040¢ per kWh of standby delivered will be given where the service is metered on the high voltage side of the transformer.

Surcharges and Credits Applicable to Delivery Service: As approved by the Commission. See Section C9.8.

ADJUSTMENT OF PRIOR RATCHETS: When a customer takes standby service under Rider No. 3, the setting or the increasing or decreasing of standby contract capacity will affect the existing ratchet levels on the supplemental rate as follows:

- (a) An amount in kW equal to the initial standby contract capacity (or to the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted maximum demand level for customers on supplemental rates D6.2 and D8 and D11.
- (b) An amount in kW equal to 65% of the initial standby contract capacity (or of the increase or decrease) will be subtracted from (or subtracted from or added to) the existing ratcheted on-peak billing demand level for customers on supplemental rates D4, D6.2 and D8 and D11.

LATE PAYMENT CHARGE: See Section C4.8.

SCHEDULE OF ON-PEAK HOURS: See Section C11.

POWER FACTOR CLAUSE: The rates and charges under this tariff are based on the customer maintaining a power factor of not less than 85% lagging. Customers are responsible for correcting power factors less than 70% at their own expense. The size, type and location of any power factor correction equipment must be approved by the Company. Such approval will not be unreasonably withheld. A penalty will be applied to the total amount of the monthly billing for supplemental and standby service for power factor below 85% lagging in accordance with the table in Power Factor Determination, Section C12. The penalty will not be applied to the on-peak billing demand ratchet nor to the minimum contract demand of the supplemental rate, but will be applied to metered quantities.

**STANDARD CONTRACT RIDER NO. 3 (Contd.) PARALLEL OPERATION AND STANDBY SERVICE AND
STATION POWER STANDBY SERVICE**

STATION POWER STANDBY SERVICE

SERVICE UNDER THIS PROVISION BECOMES EFFECTIVE APRIL 1, 2014

STATION POWER STANDBY SERVICE: Available to customers with generation facilities that are located within the Company's retail service territory and that are interconnected to ITC Transmission. The power supply requirements necessary to maintain and operate the generating facility that are normally served by the facility's on-site generation but which instead are provided by the facility's taking power through its transmission interconnection must be provided under the station Power Standby Service provisions of this rider.

APPLICABLE TO: General Service Rate Schedule Designation D3

HOURS OF SERVICE: 24 hours, subject to interruption by agreement, or by advance notice.

CONTRACT CAPACITY: Customers shall initially contract for a specified capacity in kilowatts sufficient to meet expected maximum requirements. Any single reading of the demand meter or aggregation of demand meters recording inflow to the facility in any month that exceeds the contract capacity then in effect shall become the new contract capacity.

METERING REQUIREMENTS: All customers taking service under this rider must install the necessary equipment to permit metering. The Company will supply the metering equipment. Service to the customer under this Rider will be metered with demand-recording equipment. Any equipment installed by the customer necessary to accommodate the Company's metering equipment must be approved by the Company and must be compatible with the Company's Meter Data Acquisition System.

RATES:

Power Supply:

Non-Capacity

Station Power Energy Service will be priced on the basis of the real time MISO locational hourly marginal energy price for the Company-appropriate load node. In addition to the MISO locational hourly marginal energy price the following charges will also apply:

~~0.756767~~¢/kWh for MISO network transmission costs and MISO energy market costs plus,

An administrative charge of ~~0.724~~(~~0.280~~)¢/kWh plus,

Surcharges and Credits Applicable to Power Supply, excluding PSCR, as approved by the Commission. See Section C8.5

STANDARD CONTRACT RIDER NO. 7

GREENHOUSE LIGHTING SERVICE

APPLICABLE TO: General Service Rate
Large General Service Rate

Schedule Designation D3
Schedule Designation D4

Available on an optional basis to customers desiring high intensity discharge lighting service for greenhouses or other environmentally controlled growing facilities as a daylight supplement. All lighting on this rider shall be separately metered. The customer will furnish, install, own, and maintain all equipment comprising the lighting system. No other device may be connected to this circuit except for controls, lighting and associated equipment.

HOURS OF SERVICE: Dusk to dawn service for circuits controlled by photo-sensitive or clock timing devices.

CURRENT, PHASE AND VOLTAGE: Alternating current, 60 hertz, single phase, nominally at 120/240 volts, three-wire; or three-phase, four-wire, Y connected at 208Y/120 volts; or under certain conditions three-phase, four-wire, Y connected at 480Y/277 volts.

RATE PER MONTH:

Full Service Customers:

Power Supply Charge:

Capacity Energy Charge: ~~2.175~~**0.815**¢ per kWh for all kWh
Non-Capacity Energy Charge: ~~2.345~~**4.021**¢ per kWh for all kWh

STANDARD CONTRACT RIDER NO. 8

COMMERCIAL SPACE HEATING

APPLICABLE TO: General Service Rate
Large General Service Rate

Schedule Designation D3
Schedule Designation D4

Available on an optional basis to customers desiring service for commercial space conditioning furnished through separately metered circuits to which no other device except electric space heating, water heating, air conditioning, or humidity control equipment may be connected and provided that all of the space heating must be either total electric or an electric heat pump supplemented by a fossil fuel furnace installed on a permanent basis. The customer must provide special circuits, the design and method of installation of which are approved by the Company as adapted to this service.

Electric space heating under the terms of this rider will be considered to include heating by light systems, provided the primary means of space heating at the time of maximum requirements will be furnished by the lighting system, with the balance furnished by supplementary electric heating equipment. After June 15, 1970, under the authority of the Commission in Case U-3189, service to facilities which heat by lighting is not available for premises not previously qualified for service hereunder.

RATE PER MONTH:

Full Service Customers:

Power Supply Charge:

Capacity Energy Charge: ~~5.7662.172~~¢ per kWh for all kWh, except that during the billing months of November through May, usage in excess of 1,000 kWh per month shall be billed at ~~1.9120.720~~¢ per kWh.

Non-Capacity Energy Charge: ~~3.5896.123~~¢ per kWh

Delivery Charges:

Service Charge: \$11.25 per month

Distribution Charge: ~~4.3205.183~~¢ per kWh for all kWh

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8.

Retail Access Service Customers:

Power Supply Charge for Retail Access Service Customers taking Utility Capacity service from DTE:

Capacity Energy Charge: ~~5.7662.172~~¢ per kWh for all kWh, except that during the billing months of November through May, usage in excess of 1,000 kWh per month shall be billed at ~~1.9120.720~~¢ per kWh.

Delivery Charges:

Service Charge: \$11.25 per month

Distribution Charge: ~~4.3205.183~~¢ per kWh for all kWh

in Case No. U-21297

(Continued from Sheet No. D-86.00)

STANDARD CONTRACT RIDER NO. 8 (Contd.)

COMMERCIAL SPACE HEATING

LATE PAYMENT CHARGE: See Section C4.8.

MINIMUM CHARGE: The Service Charge plus any applicable per meter per month surcharges.

CONTRACT TERM: This rate is made effective by a rider modifying the contract form prescribed for one of the applicable filed rates listed above. The contract term is co-extensive with the contract term of the applicable filed rate under which service is being taken.

INSULATION STANDARDS FOR ELECTRIC HEATING: See Section C4.9.

OPTIONAL PROVISION FOR CERTAIN COMMON AREA ACCOUNTS: Electric heating and common area usage of apartment or condominium accounts supplied through a single meter and billed under the terms of the Domestic Space Heating Rate D2 prior to September 28, 1978 may be billed under this provision without the necessity of separate metering if an initial block of kilowatthours is billed at the current General Service Rate D3. This initial block of kilowatthours will be calculated each November by averaging the usage during the previous billing months of June through October.

Full Service Customers:

Usage in excess of the initial block of kilowatthours per month shall be billed at a power supply capacity charge of ~~5.7662.172¢~~ and a non-capacity charge of ~~3.5896.123¢~~ per kilowatthour during the billing months of June through October, and a capacity charge of ~~1.9120.720¢~~ and a non-capacity charge of ~~3.5896.123¢~~ per kilowatthour during the billing months of November through May. A Distribution charge of ~~4.3205.183¢~~ per kWh for all kWh shall also be applied. The only service charge to be billed to a customer utilizing this provision will be the D3 service charge.

Retail Access Service Customers:

Power Supply Charge for Retail Access Service Customers taking Utility Capacity Service from DTE:

For Retail Access customers taking capacity service from DTE, usage in excess of the initial block of kilowatthours per month shall be billed at a power supply capacity charge of ~~5.7662.172¢~~ per kilowatthour during the billing months of June through October, and a power supply capacity charge of ~~1.9120.720¢~~ per kilowatthour during the billing months of November through May.

For all retail access customers, usage in excess of the initial block of kilowatthours per month shall be billed a distribution charge of ~~4.3205.183¢~~ per kWh for all kWh.

SUPPLEMENTAL SPACE HEATING PROVISION: This provision is available to customers taking service under the General Service Rate D3 or the Large General Service Rate D4 who purchase energy for a minimum of 10 kW of supplemental, permanently installed, electric space heating equipment. To qualify for this provision, a customer must certify in writing the amount of permanently installed space heating equipment, subject to inspection at the option of the Company, and have the said equipment on separately metered circuits to which no other device is connected. Section C4.9, Insulation Standards for Electric Heating, will not apply to this provision.

STANDARD CONTRACT RIDER NO. 10 (Contd.)

INTERRUPTIBLE SUPPLY RIDER

CONTRACT CAPACITY: Customers shall contract for a specified capacity in kilowatts sufficient to meet the customers' maximum interruptible requirements, but not less than the minimum contract capacity amounts, specified above. Demand/Energy in excess of the contracted load level will be billed under the applicable Primary Supply Rate. The contract capacity shall not be decreased during the term of the contract and subsequent renewal periods as long as service is required unless there is a specific reduction in connected load. Capacity disconnected from service under this rider shall not be subsequently served under any other tariff during the term of this contract and subsequent renewal periods.

RATE PER MONTH:

Full Service Customers:

Power Supply Charges:

Non-Capacity:

The Energy charge will be the real time MISO locational hourly marginal energy price for the DTE Electric-appropriate load node. In addition to the MISO locational hourly marginal energy price the following charges will also apply:

~~0.7567~~67¢/kWh for MISO network transmission costs and MISO energy market costs plus,

An administrative charge of ~~0.724~~(0.280)¢/kWh plus,

A voltage level service adder of 1.56% for transmission, 3.73% for subtransmission and 5.50% for primary.

Delivery Charges:

Primary Service Charge: \$70 per month

Subtransmission and Transmission Service Charge: \$375 per month

Distribution Charges:

For primary service (less than 24kV) ~~\$5.336~~.47 per kW of maximum demand

For service at subtransmission voltage (24 to 41.6 kV) ~~\$2.21~~03 per kW of maximum demand

For service at transmission voltage (120 kV and above) \$0.~~93~~89 per kW of maximum demand.

Substation Credit: Available to customers where service at subtransmission voltage level or higher is required, who provide the on-site substation including all necessary transforming, controlling and protective equipment. A credit of \$.30 per kW of maximum demand shall be applied to the maximum demand charge. A credit of .040¢ per kWh shall be applied to the energy charge where the service is metered on the primary side of the transformer.

Surcharges and Credits: As approved by the Commission. See Sections C8.5 and C9.8

Surcharges and Credits: As approved by the Commission. See Section C9.8.

LATE PAYMENT CHARGE: See Section C4.8.

MINIMUM CHARGE: The Service Charge plus the Maximum Demand Charge, plus all applicable energy charges plus any applicable per meter per month surcharge.

MAXIMUM DEMAND: The maximum demand shall be the highest 30-minute demand created during the previous 12 billing months, including the current month but not less than 50% of the contract capacity. This clause is applicable to each voltage level served.

POWER FACTOR CLAUSE: Shall be the Power Factor Clause as defined in the Primary Supply Rate (D11).

SPECIAL TERMS AND CONDITIONS: Customer-owned equipment must be operated so the voltage fluctuations on the primary distribution system of the Company shall not exceed permissible limits.

The customer will own and maintain the necessary equipment to separate the interruptible load from the firm power load. This equipment must meet the Company standards. The customer must also provide space for the separate metering of the interruptible load.

The interruptible load shall not be served from firm power circuits at any time. Violations of this provision will result in a charge of \$50 per kilowatt per month applied to the interruptible load determined to have been served from firm power circuits.

STANDARD CONTRACT RIDER NO. 14

DISTRIBUTED ~~GENERATION~~ RESOURCES

APPLICABLE TO: *All full service customers unless otherwise noted on the customer's applicable tariff.*

~~Residential Service Rate—Schedule Designation D1~~

~~General Service Rate—Schedule Designation D3~~

~~Large General Service Rate—Schedule Designation D4~~

AVAILABILITY OF SERVICE: Available to customers with on-site distributed ~~generation resources~~ desiring to operate in parallel with the Company's system and take service for their supplemental needs under one of the applicable tariffs listed above. The on-site generation capacity shall be no greater than 1500 kW at a single location. *For the purposes of this Rider, ~~Distributed generation—eligible distributed~~ resources include reciprocating engine generator sets, small turbine-generators, fuel cells, regenerative dynamometers, ~~and~~ renewable resources, **battery electric vehicles, and stationary storage.***

PARALLEL OPERATION: The customer must meet the interconnection requirements of the Company specified in "The Michigan Electric Utility Generator Interconnection Requirements" as approved by the Commission, and must enter into an Interconnection and Operating Agreement with the Company before parallel operation will be permitted. Operating in parallel with the Company's system without written approval by the Company of the interconnection and any subsequent changes to the interconnection will make the customer subject to disconnection.

The customer is advised to consult its insurers and insurance policies regarding the existence of coverage for on-site distributed generation resources. Homeowners' policies and insurers may afford varying degrees of coverage for this exposure, or may exclude it altogether. This statement is not to be viewed as the rendering of advice regarding the customer's insurance coverage.

RATES: The customer shall pay all direct costs of controlling and protective equipment necessitated by the presence of a source of power on his premises and costs to comply with the Guidelines.

Sell-Back Energy Rate:

For customers with a standard energy meter, the Company's monthly average top incremental cost of power will be applied to all kilowatt-hours delivered to the Company's system.

For customers with a time-of-day meter, the Company's average monthly top incremental cost of power for each time-of-day period will be applied to all kilowatt-hours delivered to the Company's system during that time-of-day period.

For customers with an interval meter, the Company's top incremental cost for each hour will be applied to all kilowatt-hours delivered to the Company's system during that hour.

METERING REQUIREMENTS: The Company will install separate metering for energy sold by the Company to the customer and for energy sold-back to the Company by the customer. The Company will, at the customer's request, upgrade the sell-back meter to either a time-of-day or interval meter, but the incremental cost of such upgrade is the responsibility of the customer.

CONTRACT TERM: Open order, terminable on three day's written notice by either party. Where special services are required, the term will be as specified in the applicable contract rider.

(1) Retail Open Access Customers

The Outflow Credit will be determined by the Retail Service Supplier. For customers taking capacity service from the Company, the capacity outflow credit shall be the appropriate capacity rate(s) from the customer's rate schedule.

APPLICATION FOR SERVICE

In order to participate in the Distributed Generation Program, a customer shall submit completed Interconnection and Distributed Generation Program Applications, including the application fee of \$50 to the Company.

The Distributed Generation Program application fee is waived if the customer is transitioning from the Net Metering Program.

If a customer does not act or correspond on an application for over 6 months, when some action is required by the customer, the application may be voided by the Company.

STANDARD CONTRACT RIDER NO. 21

**UTILITY INVESTMENT TARIFF FOR
LARGE ELECTRIC
~~BUS-VEHICLE~~ BATTERIES AND CHARGING
STATIONS**

- 1 **AVAILABILITY OF SERVICE:** Eligible on an optional and voluntary basis to any Company customer operating ~~diesel-internal combustion engine (ICE)~~ buses who takes service under any Company rate schedule. Service is available at the Company's discretion.
- 2 **REQUIREMENTS OF PARTICIPATION:** To participate in the Program, a customer must:
 - 2.1 Provide the Company with an Electric ~~Bus~~Vehicle Procurement Plan as described in Section 3 and agree to pay the Company's fee, if any, for reviewing the cost effectiveness analysis as described in Section 3.4.
 - 2.2~~3~~ Assure disassembly and recycling of ~~bus-vehicle~~ components associated with ~~diesel-ICE~~ fuel use in ~~buses-vehicles~~ to be replaced.
 - 2.3~~4~~ Assure that charging equipment will include customer override functionality that allows customer to charge at times outside the limits used in the cost effectiveness analysis described in Section 3.
 - 2.4~~5~~ Accept the terms of this tariff and associated Upgrade Procurement Agreement (Agreement) described in Section 4.
- 3 **ELECTRIC ~~BUS-VEHICLE~~ PROCUREMENT PLANS:** The Company or its agent will review an Upgrade Procurement Plan (Plan) for electric ~~buses-vehicles~~ (with battery size per vehicle greater than 150 kWh) that includes a cost effectiveness analysis of procuring electric ~~buses-vehicles~~ and charging stations (Upgrades) compared with ICE vehicles~~diesel-buses~~. Costs and benefits considered must include all customer costs and savings associated with procurement and operation, including electricity on an available rate schedule and annual ~~diesel-ICE~~ fuel costs, charging stations, maintenance, and planned replacements of batteries during the cost-recovery period. The Company will approve any Plan for electric ~~buses-vehicles~~ found to be cost effective for the customer based on the Participant Cost Test and for the Company based on the Utility Cost Test. The Company costs must include cost of capital and cost paid for the Upgrades. The Company's cost recovery in the proposed Upgrade Procurement Plan will be limited to an amount equal to 80% of the estimated savings resulting from the Upgrades, providing the Company's investment amount and cost recovery meets the parameters in Sections 3.2 and 6.
 - 3.1 **INCENTIVE PAYMENT:** The Company may make an incentive payment toward an electric ~~bus~~ vehicle procurement project that is less than or equal to the value of the replacement of an ICE vehicle ~~diesel-bus~~ with an all-electric ~~bus-vehicle~~ to the Company based on the Utility Cost Test. This value would be in addition to any rebate to any customer replacing an ICE vehicle~~-diesel-bus~~ with an all-electric vehicle~~bus~~.
 - 3.2 **NET SAVINGS:** Approved Plans and Company investment amounts will be limited to those for which the annual Program Service Charges (Service Charges) as described in Section 6, including program fees and the Company's cost for capital, are no greater than 80% of the customer's estimated annual savings from net reduction in Customers' annual operating costs based on current fuel prices and rates for electricity and any documented reduced operations and maintenance costs. If any special rate is used to calculate Customer savings, the Plan must specify the conditions of such rate. In addition to any Company incentive payments as described

Michigan Public Service Commission
dated _____, 2023
in Case No. U-21297

(Continued from Sheet D-123.00)

STANDARD CONTRACT RIDER NO. 21 (Contd.)

**UTILITY INVESTMENT TARIFF FOR LARGE
ELECTRIC
~~BUS-VEHICLE~~ BATTERIES AND CHARGING
STATIONS**

in 3.1, any grants or state or federal incentives available to the customer that can be used to lower the Customer's incremental cost of all-electric ~~buses-vehicles~~ within 1 year of the delivery of the new ~~bus-vehicle~~ must be included in the Plan and cost effectiveness analysis.

3.3 COPAY OPTION: In order to qualify a project that is not sufficiently cost effective for the Program, a Customer may agree to pay the portion of a project's cost that prevents it from qualifying for the Program as an upfront copayment to the seller. The Company will assume no responsibility for copayments.

3.4 COST EFFECTIVENESS ANALYSIS REVIEW FEE: If the cost of the Company's review of the Plan and its associated cost effectiveness analysis exceeds the lifecycle value to the Company of all-electric ~~buses-vehicles~~ procured by Customer based on the Utility Cost test, the Company may recover from Customer the portion of the cost for its review and analysis that is greater than the value of the investment to the Company. The Company will not recover costs for its review of analyses if the Company concludes that proposed all-electric ~~bus-vehicle~~ procurements are cost effective only with a copayment. The Company will recover all of its costs for the analysis from a Customer who declines to procure electric ~~buses-vehicles~~ identified as cost effective in a Plan that does not require a copayment.

4 ACCEPTANCE: Should the Customer wish to proceed with implementing the Plan approved by the Company, the Company will determine the appropriate monthly Service Charge, as described in Section 6. The Customer will sign an Upgrade Procurement Agreement (Agreement) and select a vendor from the Company's list of approved vendors or seek approval of its preferred vendor to effect the procurement of Upgrades.

4.1 NOTICE: If the Customer does not own the property where the electric ~~buses-vehicles~~ are to be charged, the Customer must secure the site owner's signature on an Owner Agreement, agreeing to the installation on the property of fixed assets associated with charging the all-electric ~~buses-vehicles~~. Owner must agree to not remove or damage these fixed assets, to have a Notice of the Upgrades attached to their property records, and to provide notice to successor customers at this location of the benefits and obligations of the Upgrade Procurement Agreement associated with the all-electric ~~buses-vehicles~~. Failure to obtain the signature of a successor customer on the Notice Form indicating that the successor customer received notice will constitute the owner's acceptance of consequential damages and permission for a tenant or purchaser to break their lease or sales agreement without penalty.

5 QUALITY ASSURANCE: When the Customer's procurement is completed, the vendor will be paid the amount that is determined to be cost effective by the Company as described in Section 3 and 6, following on-site or telephone inspection by the Company or its Agent confirming operation of the new equipment and decommissioning of any ~~diesel-ICE~~ equipment it replaced.

6 PROGRAM SERVICE CHARGES: The Company will recover the costs for Upgrades, including any fees as allowed in this tariff, through a fixed monthly Program Service Charge (Service Charge) assigned to the location where charging occurs until all Company costs have been recovered. Service

STANDARD CONTRACT RIDER NO. 21 (Contd.)

**UTILITY INVESTMENT TARIFF FOR LARGE
ELECTRIC
~~BUS-VEHICLE~~ BATTERIES AND CHARGING
STATIONS**

Charges must meet the net savings requirements described in Section 3.2. Service Charges will be set for a duration either equal to the length of a full parts and labor warranty or not to exceed 80% of the estimated life of the new ~~buses~~ **vehicles**, including any major part replacements such as batteries, unless the cost for these replacements is covered by the Agreement and included in the Company's analysis as described in Sections 3.2 and 3.4, whichever is longer. The Service Charges and their duration will be included in the Agreement.

6.1 COST RECOVERY: No sooner than 45 days after approval of completed electric ~~bus~~ **vehicle** procurement(s) by the Company or its Agent, the Customer shall be billed the monthly Service Charge as determined by the Company. The Company will bill and collect Service Charges until cost recovery is complete except in cases discussed in Section 7.

6.2 VACANCY OR LOCATION CHANGE: If the Customer leaves the electric service location where the ~~buses~~ **vehicles** are charged, they must either relocate the charging assets and the associated Service Charges to a new location within the Company's service territory or pay the Company an amount equal to all of the remaining Service Charges and any Company incentives in Section 3.1.

6.3 TERMINATION OF SERVICE CHARGE: Once the Company's costs described in Section 6 have been recovered, the monthly Service Charge in Section 6 shall no longer be billed, except as described in Section 7.

6.4 EXTENSION OF SERVICE CHARGE: As described in Section 7 or for any other reason, if the monthly Service Charge is reduced or suspended, once repairs have been successfully effected or service reconnected, the number of total monthly payments shall be extended until the Service Charges collected equal the Company's cost for its investment in an electric ~~bus~~ **vehicle**, including costs associated with repairs, deferred payments, and missed payments as long as the current occupant is still benefitting from the all-electric ~~buses~~ **vehicles**. Service Charges will not be extended if the Company obtains cost recovery from a reserve fund or from all ratepayers.

6.5 TIED TO THE LOCATION: Until cost recovery for the Company's investments in electric ~~buses~~ **vehicles** for a Customer at a billing location is complete or these ~~buses~~ **vehicles** fail as described in Section 7, the terms of this tariff shall be binding at the metered location and on any future Customer who receives service at that location. If the Customer or its successor wishes to relocate its operations from the assigned meter, it must first obtain consent from Company and the Customer must agree to assign its payment obligation to the new location.

6.6 DISCONNECTION FOR NON-PAYMENT: Without regard to any other Commission or Company rules or policies, the Service Charges will be considered an essential part of the Customer's bill for electric service, and the Company may disconnect the metered location for non-payment of Charges under the same provisions as for any other electric service.

STANDARD CONTRACT RIDER NO. 21 (Contd.)

**UTILITY INVESTMENT TARIFF FOR LARGE
ELECTRIC
~~BUS-VEHICLE~~ BATTERIES AND CHARGING
STATIONS**

- 7 **REPAIRS:** During the billing of Service Charges, the battery should remain under manufacturer warranty. If the charging equipment capitalized by the Company no longer functions as intended and the Company determines that the Customer did not damage or fail to maintain the Upgrades, then the Company shall reduce or suspend the Service Charges until such time as the Company and/or its vendor can repair the Upgrades. If the electric ~~bus~~ **vehicle** and/or charging station(s) cannot be repaired or replaced cost effectively, the Company will waive remaining Service Charges.

If an Upgrade fails, the Company is responsible for determining its cause and for repairing the equipment in a timely manner as long as the Customer, Owner if different, or occupants did not damage them, in which case the Customer will reimburse the Company as described in Section 7.

If the Company determines the Customer, or ~~bus-vehicle~~ owner if different, damaged or failed to maintain the electric ~~bus~~ **vehicle**, it will seek to recover from the Customer all costs associated with the installation, including any fees, the Company's cost for capital, incentives paid to lower project costs, and legal fees.

The Service Charges will continue until cost recovery is complete.

- 8 **MAINTENANCE OF UPGRADES:** Participating Customers must agree to keep all Upgrades in place for the duration of Service Charges, to maintain them per manufacturers' instructions, and report their failure to the Company or its Agent as soon as possible. As described in Section 2.4, if the Customer is not the site owner, the site owner must sign an Owner's Agreement.
- 9 **OWNERSHIP OF UPGRADES:** During the period of time when Service Charges are billed to Customers at locations where procurement of Upgrades are located, the Company will retain ownership of the Upgrades. Upon termination of the Service Charge, ownership will be assigned to the site owner unless the Agreement specifies a different party than the site owner or Company.
- 10 **MONITORING AND EVALUATION:** The *Company or its Agent will compare each participant's post-installation actual annual savings to estimated annual savings at least once for each location. If any instances are identified where actual savings are below 80% of the estimated savings in Section 3.2, the Company or its Agent will investigate to identify the cause and take appropriate action, including action described in Section 7 above or enforcement of agreements with contractors or participating customers.*

STANDARD CONTRACT RIDER 22

**CUSTOMER SITED / COMPANY
FINANCED EV SERVICE EQUIPMENT**

AVAILABILITY OF SERVICE: *The Company, at its sole discretion, may offer programs to finance and install equipment at the customer's location for the purpose of facilitating electric vehicle charging. A customer seeking to participate in a program offered under this Rider shall apply to the Company for participation. The Company may limit participation, and the availability of a program offered under this Rider does not constitute a commitment by the Company to enroll any or all interested customers. The Company, at its sole discretion, will define eligibility requirements for a program offered under this Rider.*

DEFINITIONS:

- **Qualified Electrician:** *A licensed electrician that the Company has qualified for the purposes of performing service for a program offered under this Rider*
- **Contract Term:** *The number of months or years for which a customer agrees to have a separate charge added on their electric bill*
- **Fee:** *For the purposes of this Rider, fee means the charge resulting from the Company's cost to install equipment at the Customer's location, the Contract Term, and applicable interest costs*

TERMS OF SERVICE: *For all programs offered by the Company under this Rider, the following terms of service shall apply:*

- 1) *Equipment may only be installed at a location served by the Company*
- 2) *The customer of record at the location is current on all charges, is in good standing with the Company, and has an active account at the location*
- 3) *Agreement to the program's terms and conditions provided by the Company, including but not limited to:*
 - a. *Customer agrees to have the Company pay the Qualified Electrician performing work at customer's home and, in turn, have the fee shown below added to their monthly bill for electric service until the principal balance is paid in full*
 - b. *Customer agrees to the financing agreement applicable to the program, including the years, total cost covered by the Company, and monthly fee*
 - c. *Customer agrees that, should they move out of the home where this work is performed prior to the end of the Contract Term, the full principal amount must either be paid in full at that time or transferred to their new address within DTE's electric service territory*
 - d. *Late payment charges will be applied consistent with Section C4.8*
 - e. *In the event of non-payment of program fees, the Company has sole discretion to 1) terminate participation in the program, including removal of equipment, 2) assess the balance of principal costs as a charge on the customer's bill, 3) or initiate collection processes pursuant to Section B2 and Rule 460.124(2)*
 - f. *Any other terms and conditions applicable to the program in which the customer seeks to participate*
- 4) *At the conclusion of the Contract Term and full receipt of fees by the Company from the Customer, which satisfy the financial obligations agreed to by the customer, equipment installed by the Company on the Customer's behalf shall become the sole property of the Customer. Upon notice from the Company to the Customer that the agreement has been satisfied, the Company disclaims any and all ongoing responsibility for maintenance, replacement, or warranty.*

Nuclear Plant Capital Project Detail – Routine & Small Projects

Case No.: U-21297
Exhibit: A-20
Schedule: J2
Witness: J. C. Davis
Page: 1 of 25

Program:	Control Rod Drive Mechanism (CRDM) Replacement				
Purpose & Necessity:	The control rod drive mechanism contains the mechanical parts needed to hold its associated control rod in place and drive it into and out of the reactor core. There are 185 CRDMs (one for each control rod) located at the bottom of the reactor pressure vessel. Each one of these drives works in conjunction with an associated hydraulic control unit. CRDMs function to support insertion of control rods which are used to maneuver the plant, shutdown the reactor and maintain it in a shutdown state when necessary; their function is essential in protecting the nuclear fuel from damage. CRDMs have an expected service life of approximately 12 cycles; therefore, considering their critically important function and using a proactive leveled replacement program, approximately 15 – 16 CRDMs are replaced each cycle.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 2				
Scope:	CRDM component replacement is performed on a subset of the CRDMs each refueling outage. CRDMs are radioactively contaminated equipment and require specialized shops to replace components safely. Fermi 2 CRDM component replacement is performed offsite by the Original Equipment Manufacturer (OEM). The OEM maintains the specialized nuclear qualifications and inventory of nuclear-quality CRDM components necessary for the safe and reliable function of CRDM.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; an online failure of any single CRDM (of the 185) requires a power reduction and failure of two or more requires a plant shutdown resulting in lost generation.				
Impact:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
		X	X		X
Planned Completion Schedule:	Fifteen (15) CRDMs were replaced in Refueling Outage 21 in Spring 2022. Fifteen (15) CRDMs are projected to be replaced in Refueling Outage 22 in Spring 2024.

Page: 2 of 25

Program:	Visual Annunciator System (VAS) Replacement				
Purpose & Necessity:	The purpose of the VAS is to provide visual and audible Control Room indications when abnormal conditions exist in the plant. It also maintains a printable Sequence of Events record, by recording the time that each alarm input was received and cleared. The Visual Annunciator System consists of a plant computer integration & display system that alerts operators in the Main Control Room (MCR) when a parameter or system condition is abnormal or requires action. The existing system was installed in 2002 and changes in technology and obsolescence challenged maintaining VAS reliability.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 4				
Scope:	Replacement of the Fermi 2 VAS including modification, installation and testing of computer processors, circuit cards, visual labeled annunciator tiles, pushbuttons and auditory devices to integrate with previously installed integrated plant computer system (IPCS).				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; unplanned or unrecoverable loss of the VAS or VAS components would challenge plant operator's ability to safely operate plant and require compensatory actions by plant operators including potential plant shutdown to meet regulatory requirements.				
Impact:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
		X	X		X
Planned Completion Schedule:	Visual Annunciator System project was completed in RF22 (2022)

Program:	Environmentally Qualified (EQ) Seal Replacement				
Purpose & Necessity:	The EQ seals provide separation and protection between rooms/equipment in the plant to support maintaining acceptable environmental conditions for each space. Environmental Qualification of the seal takes into account the environment (ie heat, moisture, etc) and age of the material. Select EQ seals had reached end of life (aging and obsolescence) and required replacement no later than RF21.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 5				
Scope:	Replace 66 EQ seals and associated limit switches				
Customer benefit/ Effect on cost of operation & reliability:	Maintain compliance with NRC regulations; failure to replace the EQ seals could have rendered Fermi 2 out of compliance with its NRC operating license.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:		X			X
Planned Completion Schedule:	The Environmentally Qualified (EQ) Seal Replacement project completed in RF22

Program:	Undervessel Replacements				
Purpose & Necessity:	The purpose of undervessel components goes to the heart of safely operating a nuclear reactor and directly affects control and monitoring of power levels throughout the reactor core (undervessel components are so named because the components are driven by equipment located underneath the reactor pressure vessel); unplanned or unrecoverable loss of these components would challenge plant operator’s ability to safely operate the Fermi 2 plant. Undervessel components include control rod drives and nuclear instrumentation such as local power range monitors (LPRMs). These components provide control and monitoring of power levels in the reactor.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 6				
Scope:	Replacement of undervessel components: control rod drive mechanisms and local power range monitors. Undervessel Replacement project closely relates to the Control Rod Drive Mechanism (CRDM) Replacements such that the CRDM are the expenditures to replace the internal components of the CRDM during the online cycle; Undervessel Replacements projects include the expenditures to physically go under the vessel and replace the CRDMs during the refueling outage.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; avoid a potential shutdown due to not meeting technical specification and licensing requirements.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:		X	X		X
Planned Completion Schedule:	Replaced 14 LPRMs in RF21 (2022) Projected to replace nine LPRMs in RF22 (2024)

Page: 5 of 25

Program:	Valve Replacements				
Purpose & Necessity:	Fermi 2 systems contain approximately 20,000 valves of varying sizes, ratings, quality-assurance level, types and operators. Valves are monitored for leaks and mechanical degradation. Valves are cutout and replaced if repairs are not practical; for instance, a 2" valve is generally too small to replace only internal components - a complete replacement is the more practical field implementation practice.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 7				
Scope:	Replacement of valves				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; periodic valve maintenance and replacement support regulatory compliance and improve plant reliability.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:		X	X		X
Planned Completion Schedule:	Scope of valves identified each Refueling Outage.

Program:	Plant Radio System				
Purpose & Necessity:	The plant radio system is a major system and an aspect of the regulatory-required Fermi 2 Physical Security Plan and the regulatory-required Fermi 2 Radiological Emergency Response Plan and has the purpose to be the primary means of communication for plant personnel including site security and fire brigade during operations and potential accident scenarios; loss of the plant radio system would degrade plant operators' ability to safely operate the Fermi 2 Power Plant. To address security and operations vulnerabilities replacement of the plant radio system is reasonable and prudent. Radio communications within the power plant uses an antenna system installed in the early 1980s, experiences a 90% signal loss between the base station and the distributed antennas and can transmit only the UHS frequency band. Addition of two radio frequency bands also allows DTE Electric to evaluate changes to the Fermi 2 Physical Security Plan, further improve Fermi 2's security posture and enhance security's communication capabilities with outside emergency responders such as the Michigan State Police; existing coax communications cabling did not have capacity to support the two additional frequency bands				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 8				
Scope:	Replacement and modification of the plant radio system distributed antenna system (16 antennae), communications cabling (approximately 5,800' of coax cable with fiber optic cable) and uninterruptible power supplies will improve plant radio signal fidelity throughout the plant and add two additional radio frequencies bands (VHS and 800 MHZ) within the power plant.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; improves the margins to meet regulatory performance specifically in the areas of the Radiological Emergency Response Plan and Physical Security Plan which could directly impact public safety in the event of an emergency at the station. The communication cabling replacement to fiber cable also supports Plant Wireless project.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:	X	X		X	
Planned Completion Schedule:	Plant Radio System replacement project is projected to complete in 2024

Program:	Low Pressure stop and intercept valves (LPSV/LPIV) replacements				
Purpose & Necessity:	The Low Pressure Stop Valves (LPSV) and Low Pressure Intercept Valves (LPIV) control the reheated steam flow from the Moisture Separator Reheaters (MSRs) to low pressure (LP) turbines. There are a total of twelve valves, two on each line (two lines per MSR). Periodic dismantled inspection and maintenance of LPSV/LPIVs are required to address normal wear and tear as well as to support loss control standards and maintain safe and reliable operation.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 9				
Scope:	Dismantled inspection and replacement of internal LPSV/LPIV components such as valve discs, seats, spindles and bearings.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; unexpected loss of an LPSV or LPIV could require a power derate or shutdown. Performing LPSV/LPIV maintenance per loss control standards ensures that the insurance requirements are maintained for turbine generator.				
Impact:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
			X		X
Planned Completion Schedule:	Dismantled and replaced internal components on two LPSVs in RF21 (2022) Project to dismantle and replace internal components of three LPSVs and three LPIVs in RF22 (2024)

Program:	Residual Heat Removal (RHR) Service Water outlet valve (F068A/B) replacement				
Purpose & Necessity:	The RHRSW supplies water to the Reactor Pressure Vessel (RPV) in the Emergency Core Flooding Mode of RHR, Low Pressure Coolant Injection (LPCI). The RHRSW consists of 2 completely independent and redundant divisions with the exception of the two, 1/2 capacity RHR Reservoirs. The RHRSW HX outlet valves are 24” diameter motor-operated valves (MOVs) and maintain RHR temperature by modulating the flow of cooling RHRSW through the RHR Heat Exchanger. The existing two RHRSW HX outlet valves (noted as F068A and F068B) were original plant equipment and oversized for actual plant conditions experienced during plant startup, surveillance testing and plant shutdown. Cavitation over years of operation has resulted in unacceptable wear and vibration; unanticipated or unexpected failure of these valves would result in the loss of critical plant safety equipment and result in a plant outage.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 10				
Scope:	Original equipment RHRSW HX outlet valve replacement and modification to address wear and optimize ongoing plant operating conditions. Replacement and modification of the motor operator, install of 24”x16” reducers, elbows and modification of piping and pipe supports.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; reliable RHRSW HX outlet valve performance avoids potential plant shutdown due to progressive valve degradation				
Impact:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
		X	X		X
Planned Completion Schedule:	F068A (Division I safety system) was replaced during RF21 (2022) F068B (Division II safety system) is projected to be replaced in RF22 (2024)

Program:	Unitized Actuators Replacement				
Purpose & Necessity:	Twenty-two individual hydraulic unitized actuator (UA) power units are provided for operating the 2 turbine bypass valves, 4 turbine stop valves, 4 turbine control valves, 6 intercept valves and 6 low pressure stop valves that provide for precise positioning of the turbine steam valves to modulate turbine output or isolate steam to the turbine as needed. The actuators are self-contained hydraulic power units mounted on the turbine valves. Periodic dismantled inspection and maintenance of UAs are required to address normal wear and tear as well as to support loss control standards and maintain safe and reliable operation. Replacement cycle for a UA is approximately every third refueling outage; therefore, levelized outage scope typically replaces seven or eight UAs each outage.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 11				
Scope:	Replace internal components within rotating spare UAs during cycle and have ready to use as replacements for upcoming refuel outage. Replace UAs during the refueling outage window.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; unexpected loss of a UA could require a power derate or shutdown to repair or replace. Performing UA maintenance per loss control standards ensures that the insurance requirements are maintained for turbine generator.				
Impact:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
			X		X
Planned Completion Schedule:	Replaced eight UAs in RF21 (2022) Project to replace seven UAs in RF22 (2024)

Program:	Safety Relief Valves (SRVs)				
Purpose & Necessity:	There are a total of 15 Safety Relief Valves located on the Main Steam (MS) piping exiting the Reactor Pressure Vessel (RPV). The purpose of these valves is to provide over pressurization protection for the RPV. Per ASME code: SRV pilots have an expected service life of approximately one cycle. SRV valve bodies have an expected service life of approximately four cycles.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 14				
Scope:	Replacement of the SRV pilot IBAD (platinum) coating of SRV pilots is performed offsite by a specialty supplier that maintains the specialized nuclear qualifications and inventory of nuclear-quality components necessary for the safe and reliable function of SRVs. Replace SRV pilots and valve bodies per schedule				
Customer benefit/ Effect on cost of operation & reliability:	Degradation or failure of SRVs require compensatory measures up to and including shutdown of the plant.				
Impact:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
		X	X		X
Planned Completion Schedule:	All 15 SRVs have their pilot valves replaced each refueling outage Replaced five SRV valve bodies in RF21 (2022) Project to replace four SRV valve bodies in RF22 (2024)

Program:	Security System Computer				
Purpose & Necessity:	The security computer system itself is an aspect of the Fermi 2 Physical Security Plan (the exact details of physical security plans are safeguarded and protected per regulation) – having and maintaining Fermi 2’s security equipment in accordance with the approved physical security plan is a regulatory requirement and a condition to maintaining the Fermi 2 operating license. Because the consequences of hostile actors acting against a U.S. commercial nuclear plant are significant, each U.S. commercial nuclear site’s physical security plan is routinely inspected and tested by the NRC to ensure compliance. Repair and replacement of existing components has become increasingly difficult as equipment becomes obsolete. Components of the existing security system computer have exhibited decreased performance as service time has increased. Degradation of security equipment results in multiple alarms that distract the security force from core activities, requires compensatory measures which require unscheduled overtime, requires emergent maintenance, and increases the risk of gaps in meeting the regulatory requirements.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 17				
Scope:	- Replacement and modification of approximately 3,600’ of cable with fiber optic backbone in the Fermi 2 Protected Area and power block to support closed-circuit television (CCTV) - Replacement and modification of network computer system hardware, software, and cameras for currently installed Security Computer System (SCS) and Video Management Subsystem (VMS) - Replacement and modification of early warning intrusion detection system (IDS) which includes replacement of approximately 12,500’ of cabling - Replacement and modification of one of the three security uninterruptible power sources (UPS) - Install pre-access Secure Owner Controlled Area (SOCA) Building - Replacement and modification of perimeter intrusion detection (PID) microwave equipment				
Customer benefit/ Effect on cost of operation & reliability:	Continued compliance with NRC physical protection regulations. Equipment failures require compensatory measures which require unscheduled overtime, and increase the risk of gaps in meeting the regulatory requirements. This project also brings equipment and strategy up to nuclear industry standards and allow for more efficient equipment maintenance. Additionally, the project adds new equipment (ie additional cameras) and changes the location of some equipment which has the potential to reduce ongoing operating costs.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:		X		X	X
Planned Completion Schedule:	Security System Computer replacement project is projected to be complete in 2024

Program:	Core Spray Line Vents				
Purpose & Necessity:	The purpose of the Core Spray System (CSS) is to provide reactor cooling water inventory makeup and spray cooling during a postulated accident scenario. CSS is divided into 2 divisions. Each division consists of two 50% capacity pumps, associated components and piping. CSS Keep Fill keeps the discharge header of CSS filled with water to prevent water hammer and decrease injection delay time to the RPV. CSS is filled and vented at high points in the system to remove air and non-condensable gases from the piping. All portions of the system are vented. To reduce likelihood of debris-induced fuel defects, certain evolutions during refueling outages require flushing and venting the CSS due to potential for debris to be transported directly to the reactor core. This plant operator activity has been historically performed by plant operators accessing ladders in a congested environment.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 22				
Scope:	Replacement and modification of core spray vent valves to floor level				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; improves both safety and confidence in completeness of flushing activities to mitigate nuclear fuel failures possibilities. Defect-free fuel supports most-efficient use fuel.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:	X		X		X
Planned Completion Schedule:	Division I safety system Core Spray Vents were completed in RF21 (2022) Division II safety system Core Spray Vents is projected to complete in RF22 (2024)

Program:	Snubber Replacements				
Purpose & Necessity:	Snubbers are dynamic shock absorbers (visually like a shock absorber on a vehicle) that are used to allow relatively slow movements of an attached component that are associated with thermal expansion, while providing rigid restraint against rapid motion due to dynamic loads such as seismic motion, water and steam hammer, and relief valve thrust loads. Snubbers are generally installed on almost all plant systems, both those that are important to safety as well as those secondary systems that are not. Fermi 2 has 648 snubbers its safety related systems and 54 snubbers on its non-safety related systems. The purpose of the snubber program at Fermi is to ensure snubber operability through visual inspections, functional testing, and service life monitoring. Snubbers are predominantly replaced based on service life, for functional testing of the existing snubber or for corrective maintenance.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 25				
Scope:	Internal snubber components are replaced and tested during online cycle operations to ready for replacement in upcoming refueling outage. Snubbers are replaced per schedule during refueling outage.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; snubbers protect components important to nuclear safety and reduce failures and the need for emergent repair or replacement of these components in the event they experience dynamic forces.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:		X	X	X	X
Planned Completion Schedule:	Replaced 170 snubbers in RF21 (2022) Project to replace 107 snubbers in RF22 (2024)

Program:	Main Steam Bypass Valve (MSBV) Replacement				
Purpose & Necessity:	Turbine Bypass System, in conjunction with the Turbine Valves, maintain a nearly constant pressure in the Reactor. The MSBVs will open to dump steam to the Main Condenser if steam flow to the Turbine is not sufficient to maintain constant pressure, or the Turbine is off-line. The bypass valves fast-open on a Turbine trip to mitigate the pressure transient after the trip. The MSBVs can also be used for cooling down and depressurizing the reactor after shut down, or during postulated accident scenarios. Steam from the 52” manifold flows through two MSBVs to the main condenser. Periodic dismantled inspection and maintenance of MSBVs are required to address normal wear and tear as well as to support loss control standards and maintain safe and reliable operation.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 2, Line 27				
Scope:	Dismantled inspection and replacement of internal MSBV components such as valve discs, seats, spindles and bearings. MSBVs are 12” diameter hydraulically-opened, spring-closed valves				
Customer benefit/ Effect on cost of operation & reliability:	Maintains reliability of these components that could require a power derate or shutdown and ensures that the insurance requirements are maintained for turbine generator.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management

Program:	Low Pressure Turbine Expansion Joints				
Purpose & Necessity:	The main condenser receives exhaust steam from the last stage of the three low pressure turbines (LPTs). An expansion seal, called a dogbone, is installed between each LPT and its respective condenser inlet. This seal provides a flexible connection between the turbine and the condenser to allow for expansion during the turbine and condenser heatup and cooldown periods. The flow path from the LPT extraction points to the Feed Water Heaters # 1 and #2 are through six expansion bellows. The existing extraction bellows are of non-testable design, were installed in 1994 and at end of life; unexpected or unrecoverable failure of an extraction bellow can cause a loss of generating efficiency or result in a plant shutdown. Each of the three LPTs has six expansion bellows. Each LPT has one dogbone expansion joint.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 30				
Scope:	Replace dogbone expansion joints Replace the existing non-testable LPT expansion joints with testable expansion joints				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; avoids potential plant shutdown due to age-related degradation of the expansion joints and bellows.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:			X		X
Planned Completion Schedule:	Replaced three dogbone expansion joints in RF21 (2022) Project to replace expansion bellows in RF22 (2024)

Program:	Main Steam Isolation Valve (MSIV) Replacement				
Purpose & Necessity:	The purpose of the Primary Containment Isolation System (PCIS) is to provide containment during a postulated accident scenario. Main steam isolation valves (MSIVs) are an aspect of the PCIS that prevent the excessive loss of reactor coolant from the reactor pressure vessel during a postulated accident scenario. Each of the four main steam (MS) lines has three isolation valves (MSIVs) - inboard (inside drywell), outboard (outside the drywell), and "third" MSIV (downstream of the outboard valve). The inboard and outboard MSIV are designed to close in a manner, which prevents nuclear release or exceeding mechanical limits on the MS piping. The third MSIV was installed for redundancy; it is not subject to routine replacement.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 39				
Scope:	Replace MSIV hydraulic operators, air manifolds or actuator springs of the four inboard MSIVs and the four outboard MSIVs. Replacement of these components is driven by environmental quality (EQ) requirements.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; avoids a potential shutdown due to not meeting technical specification and licensing requirements.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:		X	X		X
Planned Completion Schedule:	Replaced hydraulic operators, air manifolds and actuator springs on one inboard MSIV and one outboard MSIV in RF21 (2022) Project to replace the hydraulic operators, air manifolds and actuator springs on one inboard MSIV and one outboard MSIV in RF22 (2024)

Program:	Residual Heat Removal (RHR) Motors				
Purpose & Necessity:	The purpose of Residual Heat Removal (RHR) is to remove decay heat from the reactor and containment. RHR is a closed-loop cooling system divided into 2 loops. Each loop consists of two 33-1/3% capacity single stage centrifugal pumps, a 100% capacity shell and tube heat exchanger, and associated piping and valves. Both loops are required to fully respond to a postulated accident scenario. There are 4 RHR pumps, 2 pumps per division. Each RHR pump has a large 2,250 HP motor and provides the motive force to cooling water. The RHR motors are limited by the environmentally qualified (EQ) life of their coatings. The four RHR motors require replacement with motors with qualified coatings to continue operations beyond RF23.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 41				
Scope:	Replace 4 RHR pump motors (2 per division)				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; delay in implementation of this project could result in violations and escalated regulatory engagement by the NRC.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:		X			X
Planned Completion Schedule:	Division II safety system RHR motors will be replaced in Refueling Outage 22 in Spring 2024 Division I safety system RHR motors will be replaced in Refueling Outage 23 in Spring 2026

Nuclear Plant Capital Project Detail – Routine & Small Projects

Case No.: U-21297
Exhibit: A-20
Schedule: J2
Witness: J. C. Davis
Page: 20 of 25

Program:	Plant Wireless System				
Purpose & Necessity:	The purpose of the plant wireless system is to provide wireless data communications capacity to plant personnel during normal operations; replacement, modification and expansion of the plant wireless system increasingly supports operations to effectively operate the plant. In addition, the Plant Wireless project is resource-optimized with the Plant Radio System replacement project by sharing the conduit and cable trays. Installation of a wireless communication backbone throughout the nuclear power block directly impacts the ability to progress with other cost-savings and radiological dose-savings initiatives including Electronic Work Orders, Electronic Operator Rounds, remote dose monitoring and remote equipment monitoring. NRC regulations require management measures which include configuration management, maintenance, training and certification, procedures, records management, and other quality assurance methods, generally on a continuing basis, that are applied to items relied on for safety, to ensure the items are available and reliable to perform their functions when needed. Plant wireless system provides the networking infrastructure and capacity necessary for Fermi 2 to modernize and maintain these management measures.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 46				
Scope:	The Plant Wireless System project modifies the plant to install 120V outlets and a network switch at each radio antenna location on site. Coordination with the Plant Radio project allowed efficiencies in cable routing resulting an overall reduction in capital expenditures.				
Customer benefit/ Effect on cost of operation & reliability:	This project directly impacts the ability to progress with other cost-savings and radiological dose-savings initiatives including Electronic Work Orders, Electronic Operator Rounds, remote dose monitoring and remote equipment monitoring without the additional expenditures for modifying the plant for embedded hardwire cables.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:			X	X	X
Planned Completion Schedule:	Plant Wireless System project is projected to complete in 2024

Page: 21 of 25

Program:	Roof Replacements				
Purpose & Necessity:	DTE Electric assessments of the 42 roofs at the plant site rated 9 of the 42 roofs in poor condition and 13 of the 42 roofs in fair condition. Poor roof conditions have contributed to numerous leaks causing damage to plant facilities.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 48				
Scope:	Replacement of approximately 110,000 square feet of degraded roofs located at the Fermi 2 Office Building Annex (OBA), Office Service Building (OSB), Radiological Waste Building, Auxiliary Boiler House, Warehouse A, Warehouse C, General Service Water Building, and Buildings 27, 40 and 96.				
Customer benefit/ Effect on cost of operation & reliability:	Roof replacement minimizes the potential for injuries, likelihood of human error, the spread of contamination and the generation of nuclear waste; injury to persons, damage to equipment or plant infrastructure, and remediation of radiological contaminants would require additional cost and resources to restore.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:	X			X	X
Planned Completion Schedule:	The nine roofs listed above are projected to be replaced in 2023.

Program:	Document Management System Enhancements				
Purpose & Necessity:	NRC regulations require management measures which include configuration management, maintenance, training and certification, procedures, records management, and other quality assurance methods, generally on a continuing basis				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 49				
Scope:	Replace existing management measures with document management system which includes automated and paperless procedures, automated workflow of design modifications, and work management system integration.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; Document management system replacements allows DTE Electric to evaluate changes to the Fermi 2 Document Management organization and improve Fermi 2's regulatory compliance margins with regards to records management, configuration management, procedure use and adherence and other quality assurance requirements.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:		X		X	
Planned Completion Schedule:	Document management system enhancements is projected to complete in 2025.

Page: 23 of 25

Program:	Natural Draft Cooling Towers				
Purpose & Necessity:	The purpose of Circulating Water (CW) is to remove the heat rejected to the Main Condenser by the low pressure turbines exhaust steam. CW transfers the heat from the Main Condenser to the atmosphere via 2 natural draft Cooling Towers. Fermi 2 has two 50% capacity, hyperbolic, natural draft, concrete Cooling Towers. The towers are 400 feet high and 454 feet wide at the base. Each cooling tower is divided into 84 cooling bays. The towers are the cross flow type where air flow is perpendicular to the downward flow of water.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 50				
Scope:	Replace cooling tower structural components and cooling tower fill. The fill splash surface consists of a series of baffles, also called splash bars, which interrupt the circulating water as it gravity flows from the Cooling Tower hot water distribution basin to a cold water basin below. The splash bars serve to break up the falling water into a fine spray, allowing the heat in the circulating water to be transferred to the air. As the warmed air rises through the Cooling Tower shell, it is replaced with cooler, more dense air that enters the tower through the louvers.				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; equipment condition of components of the Natural Draft Cooling Tower directly impact thermal plant efficiency on a continuous basis impacting actual electrical output of the plant.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:			X		X
Planned Completion Schedule:	Project to replace 11 bays of fill in 2023. Project to replace 22 bays of fill in 2024.

Page: 24 of 25

Program:	Remote Monitoring				
Purpose & Necessity:	The remote monitoring project entails the installation of sensors and development of monitoring capabilities beyond current installed indication to identify early degradation of key plant equipment in order to preclude emergent failures. Remote monitoring technology will also be used to transition from time-based preventative maintenance (standard in the nuclear industry) to condition based maintenance.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 51				
Scope:	Install sensor and monitoring hardware and software to enable remote monitoring of plant equipment: Install sensors on flow-accelerated corrosion susceptible piping; sensors and software to trend and diagnose critical measurements of vibration, oil quality, temperature and pressure; install smart air operated and motor operated valve actuators and smart relays; install smart motor control centers; replace cycle isolation monitoring equipment; install dose field monitoring and remote radiation protection survey sensors.				
Customer benefit/ Effect on cost of operation & reliability:	Avoids emergent cost of key unplanned equipment failures which require emergent overtime and potentially require an unplanned plant shutdown. Transition to condition-based maintenance could extend intervals for performing maintenance and thus reduce long-term maintenance costs.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:			X	X	X
Planned Completion Schedule:	Remote Monitoring project is projected to be complete in 2025

Page: 25 of 25

Program:	Reverse Osmosis System Replacement				
Purpose & Necessity:	The reverse osmosis (RO) system produces high-quality demineralized water from raw water. This high-quality demineralized water is then stored and used as makeup water for the reactor coolant system and auxiliary systems. The system flow rate is 50 gallons per minute. Repair and replacement of existing RO components has become increasingly difficult as equipment becomes obsolete; the existing RO system is over 25 years old. Components of the existing RO system have exhibited decreased performance as service time has increased. Unreliable RO system performance can stress reactor vessel internals, plant chemistry performance and radiological safety performance. Replacement of the system addresses aging, obsolescence and availability.				
Line Number:	Exhibit A-12, Schedule B5.3, Page 3, Line 52				
Scope:	Replace and modify the existing single-train RO system consisting of a pre-treatment skid, RO skid and post-treatment skid with a dual-train RO system				
Customer benefit/ Effect on cost of operation & reliability:	Supports safe and reliable plant operations; the high-quality demineralized water supports protecting the reactor vessel internals and fuel from corrosive agents generally present in non-RO water. Replacement RO system will mitigate plant actions to rent temporary RO systems to maintain the feed of high-quality demineralized water.				
Impact Dimension:	Industrial Safety	Regulatory Compliance/Nuclear Safety	Reliability	O&M Avoidance	Asset Management
Targeted:			X	X	X
Planned Completion Schedule:	Reverse Osmosis System replacement is projected to complete in 2024
