Corrections and Updates Testimony of the Electric Rate Design Panel

1 **I. Introduction**

2 **Q. Please identify the members of the Electric Rate Design Panel.**

3 A. The Electric Rate Design Panel (“Panel”) consists of Kellie I. Smith, Carol
4 Teixeira, Michael P. Duschen, and Howard S. Gorman. This is the same Panel
5 that submitted direct testimony as part of Niagara Mohawk Power Corporation
6 d/b/a National Grid’s (“Niagara Mohawk” or “Company”) May 28, 2024 filing.
7 The terms defined in the Panel’s direct testimony have the same meanings here.

8
9 **Q. What is the purpose of the Panel’s corrections and updates testimony?**

10 A. The Panel provides corrections and updates to Niagara Mohawk’s Embedded
11 Cost of Service Study (“ECOSS”), revenue forecast, rate design, Revenue
12 Decoupling Mechanism (“RDM”), Merchant Function Charge (“MFC”),
13 Transmission Revenue Adjustment (“TRA”) mechanism, Marginal Cost of
14 Service Study (“MCS”), and outdoor lighting service items based on updates
15 and corrections made to the Company’s revenue requirement and other changes
16 identified since the May 28, 2024 filing. The Panel also provides revised bill
17 impacts based on the corrected and updated information. Further, the Panel
18 updates the proposed rates for the Company’s Residential Electric Vehicle
19 (“EV”) Smart Charging Plan, as well as incremental customer charges and
20 certain tariff charges, fees, and provisions.

21

Corrections and Updates Testimony of the Electric Rate Design Panel

1 **Q. Has the Panel prepared any exhibits to reflect its corrections and updates?**

2 A. Yes. The Panel prepared the following exhibits and one appendix:

- 3 • Exhibit __ (E-RDP-2CU) – Electric Revenue Forecast at Current Rates
- 4 • Exhibit __ (E-RDP-3CU) – Embedded Cost of Service Study
- 5 • Exhibit __ (E-RDP-4CU) – Proposed Revenue Allocation, Rate Design and
- 6 Customer Bill Impacts
- 7 • Exhibit __ (E-RDP-5CU) – Calculation of Standby, Buyback, and Standby
- 8 Phase-In Rates
- 9 • Exhibit __ (E-RDP-6CU) – Residential Electric Vehicle Charge Smart
- 10 Program
- 11 • Exhibit __ (E-RDP-7CU) – Merchant Function Charge
- 12 • Exhibit __ (E-RDP-8CU) – Outdoor Lighting
- 13 • Exhibit __ (E-RDP-9CU) – Revenue Decoupling Mechanism Annual
- 14 Target Revenues
- 15 • Exhibit __ (E-RDP-10CU) – Marginal Cost Study
- 16 • Exhibit __ (E-RDP-11CU) – Proposed Tariff Fees
- 17 • Exhibit __ (E-RDP-15CU) – Supporting Workpapers and Exhibits
- 18 • Appendix A – Company’s Responses to Relevant Information Requests

19

Corrections and Updates Testimony of the Electric Rate Design Panel

1 **Q.** Will the Panel refer to any information provided during discovery in this
2 proceeding?

3 **A.** Yes. The Panel will refer to information provided in response to Information
4 Request Nos. MI-07 and DPS-439, copies of which are included in
5 Appendix A.

6
7 **II.** **Corrections and Updates**

8 **A. Embedded Cost of Service Study**

9 **Q.** Please describe the corrections and updates to the ECOSS.

10 **A.** Exhibit __ (E-RDP-3CU) presents the updated ECOSS (“ECOSS (CU)”),
11 which reflects the revenue requirement presented in Exhibit __ (RRP-1CU), as
12 well as the sales forecast and customer count presented in the corrections and
13 updates testimony of the Electric Load Forecast Panel. As noted in the
14 Company’s response to Information Request No. MI-07, the PDF package
15 included with the Company’s May 28, 2024 filing included incorrect PDF pages
16 for Exhibit __ (E-RDP-3), Schedules 9A, 9J, and 9K in the initial filing. The
17 ECOSS (CU) presented in Exhibit __ (E-RDP-3CU) corrects this error and
18 includes the correct Schedules. This error did not impact the Company’s
19 ECOSS because the correct supporting amounts were used in the study; the
20 error was limited to the pdf package that was filed. The Company did not make

Corrections and Updates Testimony of the Electric Rate Design Panel

1 any changes to the methodology from the Company's initial ECOSS or in the
2 assignment or developer allocators included in the May 28, 2024 filing.

3
4 The results of the ECOSS (CU) are presented on Exhibit __ (E-RDP-3CU),
5 Schedule 1. Lines 1-12 show delivery revenue at present rates, net income at
6 present rates, rate base, and rate of return on rate base, for the total Company
7 and for each rate class. Line 11 presents the return on rate base at present rate
8 revenue for each class, and line 12 compares each class's return to the system
9 return of 3.1752 percent. Line 13 presents the revenue requirement for each
10 class to achieve the system average target return of 7.12 percent as shown on
11 Line 25, and line 27 computes the change in base delivery revenues needed to
12 achieve this revenue requirement. This information provides guidance for
13 allocation of the Company's proposed revenue increase and rate design.

14 15 **B. Revenue Allocation**

16 **Q. Please describe the Company's proposed revenue allocation.**

17 A. Exhibit __ (E-RDP-4CU), Schedule 1 presents the proposed revenue allocation
18 to meet the revenue requirement presented in Exhibit __ (RRP-1CU). To
19 produce the target revenue for each class, the Panel multiplied the increases
20 proposed in its initial filing, shown on Exhibit __ (E-RDP-4), Schedule 1, line
21 29, by 95.73 percent; these updated proposed increases are shown on Exhibit

Corrections and Updates Testimony of the Electric Rate Design Panel

1 __ (E-RDP-4CU), Schedule 1, line 29. The Company's Within band, reflecting
2 returns of 0.75X the average to 1.25X the average, is the same as in the original
3 filing. This is appropriate because the relative returns for each class computed
4 in the ECOSS (CU) are reasonably close to the relative returns in the
5 Company's initial filing (compare Exhibit __ (E-RDP-4CU), Schedule 1, lines
6 7-8 to Exhibit __ (E-RDP-4), Schedule 1, lines 7-8), and the positions of the
7 classes within the bands are the same, with two exceptions. SC-3A
8 Secondary/Primary moved from Within the band in the original filing (relative
9 return 1.14X) to Over the band in corrections and updates (1.45X) and SL
10 moved from Within the band in the original filing (1.07X) to Under in
11 corrections and updates (0.50X). These changes result from changes in the
12 revenue requirement that flow through the ECOSS (CU) and not from any
13 change in methodology. The changes and the effects of the changes on the
14 percentage increases assigned to each class are relatively modest.

15
16 The delivery revenue proposed for each class is shown on Exhibit __ (E-RDP-
17 4CU), Schedule 1, line 33. The proposed revenue allocation produces returns
18 ranging from 5.78 percent to 8.09 percent (except for SC-1C, which is 12.45
19 percent) which are close to the system target return of 7.12 percent (line 43),
20 and reflects the results of the ECOSS (CU).

Corrections and Updates Testimony of the Electric Rate Design Panel

1 C. Rate Design

2 **Q. How were the proposed rates for each class developed?**

3 A. Exhibit __ (E-RDP-4CU), Schedule 2 presents the proposed rates for each class.

4 The proposed rates produce the target revenue for each class that is developed
5 on Schedule 1, line 33, with some differences due primarily to rounding. The
6 fixed monthly charges and the RkVA rates, where applicable, were not changed
7 from the original filing. The kWh-based and kW-based volumetric rates for
8 each class were then computed to produce the balance of each classes revenue
9 target.

10
11 After this initial step, the incremental Energy Assistance Program (“EAP”)
12 discount amount for SC-1 was computed; this amount, \$54.7 million, was
13 spread among the rate classes in proportion to the updated class revenue targets.
14 The additional revenue to be collected from each class was applied to increase
15 volumetric rates. The Total Distribution at proposed rates, \$2,390,136,068
16 (Exhibit __ (E-RDP-4CU), Schedule 2, line 13, is very close to the target
17 revenue of \$2,390,417,896 (Exhibit __ (E-RDP-4CU), Schedule 1, line 33).

18
19 While the EAP discount amounts included in the revenue requirement remain
20 at \$36.1 million, the incremental portion of the EAP discounts increased to
21 \$54.7 million. This results in a total EAP discount budget of \$90.8 million.

Corrections and Updates Testimony of the Electric Rate Design Panel

1 Estimated EAP discounts were re-calculated and are included in the EAP bill
2 impacts.

3
4 The NYPA Credit and related ETIP Adder, as well as the SC-1 – VTOU rates,
5 were computed as described in the Panel's direct testimony. The Company also
6 updated its SC-7 Standby rates, SC-7 Standby Phase-in Rates, and SC-6
7 Buyback rates for the updated revenue requirement and ACOS study, as
8 provided in Exhibit __ (E-RDP-5CU).

9 10 **D. Revenue Forecast**

11 **Q. Please describe the corrections and updates to the revenue forecast.**

12 A. The Panel is updating Exhibit __ (E-RDP-2), Schedules 1-3, which provides the
13 Company's revenue forecast at present rates, to reflect (i) updates to the revenue
14 forecast to reflect the updated sales and customer count forecast presented in
15 the corrections and updates testimony of the Electric Load Forecast Panel, (ii)
16 outdoor lighting sales and revenue as well as the inflation rate applicable to
17 certain components of miscellaneous revenue such as miscellaneous third-party
18 billing, distributed generation interconnection fees, and right of way, and (iii)
19 revisions to the surcharges and miscellaneous revenues as further described
20 below.

Corrections and Updates Testimony of the Electric Rate Design Panel

1 In addition, the Company discovered an error related to the SC7 discounts
2 presented on Exhibit __ (E-RDP-2). The annual discounts of \$106,655 were
3 presented as a positive amount but should have been included as a credit of
4 \$106,655 per year. Therefore, the total revenue for the Rate Year and the Data
5 Years in overstated by \$213,310. The Company did not discover the error until
6 after the models had closed for purposes of Corrections and Updates. As such,
7 this correction is not included in Corrections and Updates but will be reflected
8 in the Company's Rebuttal filing.

9
10 Exhibit __ (E-RDP-15CU) provides the updated workpapers to the revenue
11 forecast presented in Exhibit __ (E-RDP-2CU).

12
13 **Q. Please describe the updates to miscellaneous revenues.**

14 A. The Company updated inflation rates that impacted the forecast of several
15 miscellaneous revenue items. The increase in inflation rates led to higher
16 revenue forecasts for the various miscellaneous revenue items noted above.
17 Further, the Company noted a typographical error in the fiscal year 2027
18 ("FY27") revenues for Indeck-Olean, which set that revenue to \$0 in the initial
19 filing. The Company corrected this to \$17,749 in Line 56 of Exhibit __ (E-
20 RDP-2CU), Schedule 5, page 2. The revised miscellaneous revenue forecast is
21 provided in Exhibit __ (E-RDP-2CU), Schedule 5.

Corrections and Updates Testimony of the Electric Rate Design Panel

1

2

E. Transmission Revenue Adjustment

3

Q. Is the Company proposing any corrections to the TRA mechanism?

4

A. Yes. As explained in the Company's response to Information Request No. DPS-439, the Company did not include the forecast incremental operational expense ("Opex") associated with capital expense ("Capex") for regional transmission investments (*e.g.*, CLCPA Phase 2) or the associated revenue in the revenue requirement. In hindsight, the Company should have included both the Opex and revenues because the revenues are trued up through the TRA mechanism. To remedy this disconnect, the Company proposes to include a provision in the TRA that would allow the Company to adjust the actual transmission revenue to remove this Opex related revenue when calculating the over or under recoveries of transmission revenue in the TRA mechanism.

14

15

F. Bill Impacts

16

Q. Did the Company update the monthly bill impacts?

17

A. Yes. The Company prepared updated monthly bill comparison tables showing the net change to customers' monthly delivery and commodity charges by zone for different levels of usage in Exhibit __ (E-RDP-4CU), Schedules 8.1 through 8.3, based on the updated revenue requirement. Other updates included updated EAP credits, updated SC-3 incremental customer charges for Special Provision

21

Corrections and Updates Testimony of the Electric Rate Design Panel

1 L customers, updated MFC current rates due to the updated revenue forecast at
2 current rates, updated MFC proposed rates, updated SBC rates due to the
3 updated revenue forecast, and updated Net Utility Plant and Depreciation
4 Expense Reconciliation mechanism surcharge current rates due per the rates
5 effective July 1, 2024. In addition, the Company prepared updated total bill
6 impact tables for Outdoor Lighting customers in Exhibit __ (E-RDP-8CU),
7 Schedule 2, for similar updates.

8
9 As in the Panel's direct testimony, the bill impacts are compared to the rates
10 that are in effect as of July 1, 2024, which are the Stayout Period rates from the
11 2020 NMPC Electric Rate Case.

12 13 **G. Revenue Decoupling Mechanism**

14 **Q. Please describe the updates to the RDM.**

15 A. Exhibit __ (E-RDP-9CU) provides updated annual target revenues for each
16 reconciliation group for the RDM reconciliation. The updated targets are per
17 the updated Final Computed Revenue for the Rate Year as found in Exhibit __
18 (E-RDP-4CU), Schedule 2, page 2.

Corrections and Updates Testimony of the Electric Rate Design Panel

1 **H. Merchant Function Charge**

2 **Q. Please describe the updates to the MFC.**

3 A. Exhibit __ (E-RDP-7CU) provides updated MFC targets to reflect the updated
4 sales forecast provided by the Electric Load Forecast Panel, as well as the
5 updated WACC percentage as shown in Exhibit __ (RRP-1CU).

6

7 **I. Outdoor Lighting**

8 **Q. Please describe the corrections and updates to the outdoor lighting**
9 **rate design.**

10 A. The Panel has several updates and one correction to its outdoor lighting service
11 testimony.

12

13 First, the facility data supporting the revenue forecast and rate design has been
14 adjusted to reflect Section 70 petitions seeking approval to transfer street
15 lighting assets to municipal customers that have been approved by the
16 Commission between January 1, 2024 and June 30, 2024. Specifically, in
17 contemplation that those municipalities' street light assets will be sold prior to
18 the start of the proposed Rate Year, the Panel moved the following
19 municipalities' facility quantities from SC-2 (Company-owned and maintained)
20 to SC-3 (customer-owned and maintained): City of Niagara Falls, City of
21 Oswego, City of Fulton, City of Amsterdam, Town of Cheektowaga, and City

Corrections and Updates Testimony of the Electric Rate Design Panel

of Johnstown. The facility quantities and usages provided in Exhibit __ (E-RDP-8CU), Schedule 1 reflect the adjustments to the Historic Test Year quantities for the above expected sales. In addition, the Panel made minor adjustments to the revenue forecast and rate design based on known municipalities' conversion of HID to LED luminaires or other minor changes to their lighting facility quantities.

Second, the Lighting Service Charges for SC-2 and SC-3 in Exhibit __ (E-RDP-8CU), Schedule 4 have been updated with the revised inflation factor between the Historic Test Year and Rate Year, summarized in Table 1 below.

Table 1 – Summary of Lighting Service Charges for the Rate Year

	Initial Filing Rate	C&U Proposed Rate
SC-2	\$138.17	\$138.35
SC-3 Overhead	\$279.64	\$279.93
SC-3 Underground	\$433.50	\$433.88
SC-3 Underground Residential	\$252.44	\$252.78
SC-3 Overhead Emergency	\$385.25	\$385.68
SC-3 Underground Emergency	\$544.52	\$545.12

Third, in the Panel's initial testimony, the calculation of the proposed outage credit allowance incorrectly included both the Integrated Energy Data Resource ("IEDR") Phase 2 rate and the Clean Energy Standard Delivery ("CES-D") rate as \$0.00008/kWh. The IEDR Phase 2 costs are recovered through the CES-D,

Corrections and Updates Testimony of the Electric Rate Design Panel

1 so the inclusion of both rates is duplicative. The CES-D rate has been removed
2 as shown in Exhibit __ (E-RDP-8CU), Schedule 3.

4 **J. Changes to Residential Electric Vehicle Smart Charging Plan**

5 **Q. Is the Company revising the proposed rates for the Residential Electric**
6 **Vehicle Smart Charging Plan?**

7 A. Yes. On June 21, 2024, the Commission issued an Order in Case 18-E-0138
8 approving the Company's petition filed on February 5, 2024 requesting
9 modifications to its Residential Electric Vehicle Smart Charging Plan. The
10 tariff amendments modifying the plan will become effective August 1, 2024.
11 The modified plan will now provide participating electric vehicle residential
12 customers with a fixed monthly incentive (segregated into delivery and supply
13 components). Customers may receive the incentive each month if they meet a
14 minimum monthly kWh of charging and have a minimum off-peak charging
15 percentage. The fixed monthly incentive is estimated based on avoided costs
16 compared to the SC-1 delivery rate, SC-1 Voluntary Time of Use Off-peak
17 delivery rate, SC-1 supply forecast, and estimated average electric vehicle home
18 off-peak kWh charging. The Company is providing an updated Exhibit __ (E-
19 RDP-6CU) to illustrate the proposed delivery and supply fixed monthly
20 incentives for the Rate Year.

Corrections and Updates Testimony of the Electric Rate Design Panel

1 **K. Changes to Tariff Fees, Charges, and Provisions**

2 **i. Incremental Customer Charges**

3 **Q. Please describe the corrections and updates to the proposed incremental**
4 **customer charges.**

5 A. The Panel updated the incremental customer charge associated with customers
6 enrolled in (i) Special Provision L of SC-1, Residential Optional Time of Use
7 Delivery and Commodity Rate and (ii) Special Provision O of SC-2, Non-
8 Demand Optional Time of Use Rate to include both the revised inflation factor
9 between the Historic Test Year and Rate Year, as well as the pre-tax WACC.
10 The change resulted in an increase of the rate from \$5.11 per month to \$5.15
11 per month and is shown in Exhibit __ (E-RDP-11CU), Schedule 4.2, page 4.

12
13 **Q. Does the Panel propose updates to any other proposed incremental**
14 **customer charges?**

15 A. Yes, the Panel updated the incremental customer charge associated with
16 customers enrolled in (i) Special Provision P of SC-2 Voluntary Hourly Priced
17 Electricity Supply Service for SC-2D Customers, (ii) Special Provision L of
18 SC-3, Electricity Supply Service for Customers 250 KW or Greater, and (iii)
19 Special Provision N, Voluntary Electricity Supply Service for SC-3 Customers
20 Below 250 KW to include both the revised inflation rate between the Historic
21 Test Year and Rate Year, as well as the pre-tax WACC. The change resulted

Corrections and Updates Testimony of the Electric Rate Design Panel

1 in an increase of the rate from \$27.15 per month to \$27.63 per month and is
2 shown in Exhibit __ (E-RDP-11CU), Schedule 4.3, page 5.

3

4 **ii. Paperless Billing Credit**

5 **Q. Has the Company proposed any updates to the Paperless Billing Credit?**

6 A. The Company updated the calculations for the Paperless Billing Credit using
7 the revised inflation factor, which increased the \$0.59 credit in initial testimony
8 to an updated credit of \$0.60. The updated calculations are provided in Exhibit
9 __ (E-RDP-11CU), Schedule 2, Page 1.

10

11 **iii. Billing Backout Credit and Billing Charges**

12 **Q. Has the Company proposed any updates to the Billing Backout Credit and**
13 **Billing Charges?**

14 A. Exhibit __ (E-RDP-11CU), Schedule 3 updates the Company's calculation of
15 its customer Billing Backout Credit and its Billing Charges to ESCOs for
16 consolidated billing. Based on the updated calculations there is no change from
17 the charges and credits proposed in initial testimony, which are shown in the
18 table below.

Corrections and Updates Testimony of the Electric Rate Design Panel

1 **Table 2 – Revised Proposed ESCO Billing Charge and Backout Credit**

Type of Customer	Type of ESCO Service	ESCO Billing Charge	Customer Backout Credit
Electric Only	ESCO Supplies Electric	\$0.92	\$0.92
Dual Electric & Gas	ESCO Supplies Electric	\$0.46	\$0.46

2

3 **L. Marginal Cost of Service Study**

4 **Q. Please describe any changes to the Marginal Cost of Service Study.**

5 A. The Marginal Cost of Service Study was updated to reflect the updated revenue
6 requirement (Exhibit __ (RRP-1CU)) and the results of the ECOSS (CU). It is
7 presented in Exhibit __ (E-RDP-10CU). The proposed EJP Rates in Exhibit __
8 (E-RDP-10), Schedule 7, in the Company's initial testimony were mistakenly
9 shown using the EJP rates before ETIP was included. This is corrected in
10 Exhibit __ (E-RDP-10CU), Schedule 7.

11

12 **III. Conclusion**

13 **Q. Does this conclude your testimony?**

14 A. Yes, it does.

**Niagara Mohawk Power Corporation (Electric)
Embedded Cost of Service Study (ECOSS) Methodology**

INTRODUCTION

The testimony of the Rate Design Panel describes the purpose of performing an Embedded Cost of Service Study (“ECOSS”), and summarizes the methodology used to prepare the ECOSS in this proceeding of Niagara Mohawk Power Corporation (Electric) (“NiMo-Electric” or the “Company”). The testimony describes the three-step ECOSS process (functionalization, classification, class allocation) used to analyze each element of the revenue requirement, in order to assign or allocate it among the rate classes.

This Schedule 10 describes the ECOSS methodology in more detail. Part 1 describes the three-step ECOSS process.

Part 2 describes how each element of the revenue requirement (rate base, expense and revenue) was assigned or allocated in each of the three steps. Rate base, expenses and revenues are identified using the Uniform System of Accounts (FERC Accounts). Part 2 serves as a guide when reviewing the other schedules in this exhibit.

Part 1. DETAILED ECOSS METHODOLOGY

The purpose of an ECOSS is to apportion fairly a utility’s total revenue requirement, including plant and other investments, operating expenses, depreciation, and taxes among the rate classes served by the utility. The ECOSS computes for each rate class the revenue to be collected to produce the overall required rate of return on rate base. This information provides valuable guidance in revenue allocation, and in the development of rates, to recover the revenue requirement from all rate classes.

The three steps of the ECOSS are:

Functionalization- Cost elements are separated among the utility’s basic service functions, by determining what physical purpose each cost element serves. The Company’s functions are: Transmission; Primary Distribution; Secondary Distribution; Billing; Regulatory; Competitive Supply; Competitive Collections; Competitive Billing; Competitive Meter Data; Competitive Meter Services; and Competitive Meter Ownership.

Classification- Each functionalized cost element is classified as Customer-related (connect customers to the distribution system); Demand-related (meet peak capacity requirements) or Commodity-related (deliver energy to customers).

Class Allocation- Cost elements that have been functionalized and classified are allocated among the service classes, using an appropriate allocation factor for each cost

**Niagara Mohawk Power Corporation (Electric)
Embedded Cost of Service Study (ECOSS) Methodology**

element. Allocation factors can be external (*e.g.*, number of customers, kWh delivered, class peak requirements, class contribution to system peak, and historical bad debt experience) or internal (*e.g.*, property insurance is based on plant investment).

Part 2. ALLOCATOR FOR EACH ELEMENT OF THE REVENUE REQUIREMENT

A. Rate Base

1. Intangible Plant (*Account 302*)

Primarily the cost of franchises and other rights. Allocated in proportion to plant investment.

2. Transmission Plant (*Account 350-359*)

The bulk transmission system moves power from generation sources to the primary distribution system, and is designed to meet system peak requirements. It operates at voltages of 22 kV and up. Classified as Demand and allocated among the rate classes based on contribution to the system peak ("1CP").

3. Primary Distribution and Secondary Distribution Plant (*FERC Accounts 360-374*)

Land & Land Rights; Structures and Improvements; Station Equipment –This plant connects the Transmission system to the Primary Distribution system, and is designed to meet system peak requirements at Primary voltages. Classified as Demand and allocated among the rate classes based on class non-coincident peak requirements at Primary voltages ("NCP-Pri").

Poles, Towers and Fixtures; Overhead Conductors; Underground Conductors; and Underground Conduits- This includes:

Primary Distribution plant, which moves power from the transmission system to the secondary distribution system and to customers' premises; operates at voltages of 2.2 kV up to 15 kV and related assets; and

Secondary Distribution plant, which moves power from the primary distribution system to customers' premises; includes service drops.

These plant assets are separated between Primary and Secondary based on the voltages at which they operate.

Design considerations for Primary Distribution and Secondary Distribution plant include extending the system to serve customers (*i.e.*, customer-related) and providing

Niagara Mohawk Power Corporation (Electric)
Embedded Cost of Service Study (ECOSS) Methodology

capacity to meet local peak customer requirements (*i.e.*, demand-related). Therefore the cost of this plant is classified as partly customer-related and partly demand-related.

A minimum system study was performed to determine the customer-related portion, representing the cost of extending the system to customers. The study and the results are described in the testimony of the Rate Design Panel.

The balance, the demand component, was allocated among the classes based on class non-coincident design-day requirements (“NCP”). The NCPs were developed by computing the load factor for each rate class and applying it to forecast kWh.

However, the conductors identified in the minimum system study have load-carrying capacity, even though their cost is determined primarily by length. In fact, the minimum system would be able to meet the peak load for all or almost all customers in SC-1, SC-1C, and SC-2-No demand; that is, *no further investment in higher capacity conductors would be required. Therefore, no demand-related costs for Overhead Assets or Underground Assets were allocated to SC-1, SC-1C, and SC-2-No demand.*

Transformers – Transformers are sized to meet the peak needs of local customers. A special study identified, for each transformer on the system, the customers served, by rate class. The cost of each transformer (using current cost) was allocated based on the estimated NCP per customer of the customers served.

Services- Services connect the customer to the Primary or Secondary Distribution plant. There is a direct correspondence between number of customers and number of services; therefore, services are classified as customer-related. The costs are estimated based on the current cost for a typical service line for each rate class, which reflects the peak requirements for each rate class.

Meters- Meters (including installation costs and house regulators) are classified as customer-related, and allocated based on the cost for a typical meter for each rate class. The Company is installing AMI Meters for all customers; current meters were weighted 42.5% and AMI meters were weighted 57.5%, reflecting the replacement schedule.

4. General Plant (*Accounts 389-399*)

Primarily Structures & improvements; Tools, shop & garage; and office furniture and equipment. General plant was functionalized, classified and class allocated in proportion to the direct labor content of operating and maintenance expense, because these assets primarily support direct labor.

**Niagara Mohawk Power Corporation (Electric)
Embedded Cost of Service Study (ECOSS) Methodology**

5. Depreciation Reserve (*Account 108*)

Each component was allocated in proportion to the corresponding asset cost.

6. Other Rate Base Items

Each component was allocated in proportion to the corresponding asset cost.

Materials & Supplies, Prepayments and Cash Working Capital (non-commodity) were allocated in proportion to O&M costs. Accumulated Deferred Income Tax and CWIP were allocated in proportion to plant in service. Regulatory Assets and Earnings Base Adjustment were allocated in proportion to rate base. Cash Working Capital (commodity) was allocated in proportion to Commodity revenue.

B. Expenses

1. Purchased Power (*Account 555*)- Allocated in proportion to

2. Transmission O&M (*Account 560*)- Allocated based on 1CP (same as Transmission plant).

3. Distribution O&M (*Accounts 580-599*)- Most accounts were allocated on the same basis as the asset to which the account relates. *Operations Supervision & Engineering* (Account 580) and *Operations Supervision & Engineering-* (Account 590) were allocated based on direct labor content of O&M accounts. *Miscellaneous Expenses* (Account 588) Allocated based on a special study to identify the activities in the account. *Load Dispatching* (Account 581) was allocated based on kWh deliveries because this activity takes place year round (actually minute-by-minute).

4. Customer Accounts Expenses (*FERC Accounts 901-919*)

These accounts were functionalized among the following functions based on a study of competitive functions performed by the utility: Billing; Competitive Supply; Competitive Collections; Competitive Billing. The accounts are all customer-related.

Supervision (Account 901)- Allocated in proportion to Customer records and collections (Account 903)

Meter reading (Account 902)- Allocated based on meter cost.

Customer records and collections (Account 903)- Billing-related activities are Print and mail bills and a portion of Call Center (related to Billing inquiries). Collections-related activities are a portion of Call center and a portion of Credit & collections. Distribution-related activities are the balance of Call center, the balance of Credit &

Niagara Mohawk Power Corporation (Electric)
Embedded Cost of Service Study (ECOSS) Methodology

collections, Field Collections, Print & Mail, Account Maintenance and Payment Processing.

Each functionalized activity was allocated among the rate classes using an appropriate allocation factor, and the results were summed to compute allocators for Account 903- Distribution, Account 903- Billing and Account 903- Collections.

Uncollectible accounts expense (Account 904)- Allocated based on historical write-off experience.

Miscellaneous customer accounts (Account 905)- Activities support customer contact; allocated in proportion to Account 903.

Customer assistance expenses (Account 908)- This account includes the cost of programs for Heat Pumps, AMI, VDER revenue offset, Prepaid DRCR, Marketing and Growth, and Regional Account Services. Each of these programs was allocated using an appropriate allocator.

This account also includes Energy Assistance Programs discounts and Economic Development grants, which were allocated based on the overall revenue requirement. It also includes Energy Efficiency programs, which were allocated based on expected benefits using the methodology applied in the prior rate case. It also includes SBC Conservation costs, which offset revenue and were allocated based on SBC revenue.

Customer assistance, Demonstration & selling, Advertising (Accounts 910-916)- Allocated based on number of customers.

5. Administrative & General expenses (*FERC Accounts 920-939*) are grouped as follows:

- Most A&G expenses are labor-related, and are functionalized, classified and allocated in proportion to direct labor content of O&M accounts
- Plant-related expenses are functionalized, classified and allocated in proportion to according to gross plant
- Regulatory commission expense (Account 928) allocated based on Rate base
- A portion of A&G Salaries (Account 920) related to major accounts was allocated to the appropriate classes on a per-customer basis.
- Street Lighting programs were directly assigned.
- Miscellaneous General Expense (Account 930.2) was allocated based on Rate base. A&G-Rents (Account 931) representing support services provided by affiliates was allocated based on the nature of services provided, including Customer, Meter, Labor, Purchasing, and Operations and Business.

Niagara Mohawk Power Corporation (Electric)
Embedded Cost of Service Study (ECOSS) Methodology

6. Depreciation and Amortization Expense (*FERC Accounts 403-407*)

Each component was allocated in proportion to the corresponding asset cost.

7. Taxes other than on income

Property taxes were allocated in proportion to plant, excluding services and meters. Payroll taxes were allocated in proportion to direct labor content. Other taxes were allocated in proportion to plant.

8. Income Tax Expense

Income Tax Expense at present rates was allocated in proportion to Pretax income at present rates. Income Tax Expense at the revenue requirement (i.e., proposed rates) was computed based on the target return used to develop the revenue requirement.

C. Revenue

Revenue from base delivery (including transmission) charges, commodity, MFC, SBC and VDER revenue were assigned based on forecast revenue at present rates.

Wholesale Transmission Revenue was allocated in the same manner as Transmission assets (ICP). Late payment revenue was allocated based on historical write-off experience. Pole attachment revenue was allocated in the same manner as the assets that support the revenue. Revenue representing recovery of certain costs (supervision of field construction and direct load control) were allocated in proportion to the O&M accounts where the costs are reflected. CSS Reestablishment revenue was allocated based on number of customers. Special L Meter revenue was directly assigned to the appropriate classes. ETIP credit was allocated based on Energy Efficiency programs. Other revenue was allocated based on the Company's overall revenue requirement.
