

BEFORE THE
STATE OF NEW YORK
PUBLIC SERVICE COMMISSION

Proceeding on Motion of the Commission as to the Rates,
Charges, Rules and Regulations of Orange and Rockland
Utilities, Inc. for Electric and Gas Service.

Case 24-E-XXXX

January 2024

Prepared Testimony of:

Demand Analysis and Cost

of Service Panel

Yan Flishenbaum
4 Irving Place
New York, New York, 10003

Christine Kim
4 Irving Place
New York, New York, 10003

Jennifer Huang

DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

I. INTRODUCTION

1 Q. Would the members of the Demand Analysis and Cost of
2 Service Panel ("Panel") please state their names and
3 business addresses.

4 A. Yan Flishenbaum, Christine Kim, and Jennifer Huang, 4
5 Irving Place, New York, New York 10003.

6 Q. By whom are you employed and in what capacity?

7 A. **(Flishenbaum)** I am employed by Consolidated Edison Company
8 of New York, Inc. ("Con Edison") as the Department Manager
9 of the Load Research and Cost Analysis Section of the Rate
10 Engineering Department.

11 **(Kim)** I am employed by Con Edison as the Section Manager
12 of the Load Research section in the Rate Engineering
13 Department.

14 **(Huang)** I am employed by Con Edison as the Section Manager
15 of the Cost Analysis section in the Rate Engineering
16 Department.

17 Q. Please summarize your educational background and business
18 experience.

19 A. **(Flishenbaum)** I received a Bachelor of Business
20 Administration Degree in Economics from Pace University in
21 2001 and a Master of Business Administration Degree in

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 Finance and Economics from New York University in 2008.

2 In 2001, I began my employment with Con Edison in the Cost
3 Analysis Area of the Rate Engineering Department. In 2003,
4 I was promoted to Analyst, mainly involved in the
5 development of the costing methodologies related to
6 unbundling. I was promoted to Senior Analyst in 2005. In
7 2008, I was promoted to Senior Rate Analyst responsible
8 for developing the Company's cost-of-service models. In
9 2013 I was promoted to Section Manager of the Electric
10 Rates area of the Rate Engineering Department. I was
11 promoted to my current position in 2016.

12 **(Kim)** I am the Section Manager of the Load Research
13 section in the Rate Engineering Department. In that
14 capacity, I am responsible for preparing demand analyses
15 related to electric service. Additionally, I have a
16 variety of duties related to load research sample design
17 and data analysis. I began my employment with Con Edison
18 in 2010 as a Senior Energy Analyst in Forecasting
19 Services. In 2013 I moved into Load Research as a Senior
20 Rate Analyst and in 2018 was promoted to Section Manager.
21 I received a Bachelor of Arts degree in Economics from New

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 York University in 2007, and a Master of Science degree in
2 Quantitative Methods and Modeling from Baruch College in
3 2012. Prior to working for Con Edison, I worked as an
4 analyst for MCEnergy Inc., an energy consulting company
5 which provides consulting services and negotiates energy
6 deals for various real estate investment trusts throughout
7 the country.

8 **(Huang)** I am the Section Manager of the Cost of Service
9 section in the Rate Engineering Department. I am
10 responsible for preparing cost of services studies related
11 to electric service. I received a Bachelor of Science
12 degree in Industrial Engineering from Rutgers School of
13 Engineering in 2001 and a Master of Business
14 Administration degree in Professional Accounting and
15 Finance from Rutgers Business School in 2005. I began my
16 employment with Con Edison in 2013 as a Senior Analyst in
17 the Smart Grid Implementation Group. In 2015, I moved to
18 Finance Sox/Enterprise Risk Management as a Senior
19 Analyst. In 2018, I moved into Cost of Service section of
20 the Rate Engineering department as a Senior Analyst, in
21 2021 I was promoted to Senior Rate Analyst, and in 2022 I

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 was promoted to Section Manager. Prior to working for Con
2 Edison, I worked as a CPA for Deloitte, LLP. and AIG, Inc.

3 Q. Have you ever testified before the New York Public Service
4 Commission ("NYPSC") or any other state utility
5 commission?

6 A. **(Flishenbaum)** Yes. I have testified in numerous
7 regulatory proceedings before the NYPSC and the
8 Pennsylvania Public Utility Commission ("PAPUC").

9 **(Kim)** Yes. I have testified before the NYPSC.

10 **(Huang)** No.

11 **II. PURPOSE OF TESTIMONY**

12 Q. What is the purpose of the Panel's testimony?

13 A. Our testimony presents Orange and Rockland Utilities,
14 Inc.'s ("Orange and Rockland", "O&R", or the "Company"):

- 15 (1) Class Demand Study;
- 16 (2) Embedded Cost of Service ("ECOS") Study, including
17 the development of unbundled costs associated with
18 competitive services;
- 19 (3) Seasonal Rate Study; and
- 20 (4) Allocated Cost of Service ("ACOS") Study.

21 Our testimony also addresses marginal costs.

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 Q. Is the Panel sponsoring any exhibits?

2 A. Yes, we are sponsoring the following four exhibits:

3 Exhibit ____ (DAC-1 - Electric Class Demand Study);

4 Exhibit ____ (DAC-2 - ECOS Study and Unbundled Cost

5 Components, Schedules 1-3);

6 Exhibit ____ (DAC-3 - Seasonal Rate Study); and

7 Exhibit ____ (DAC-4 - Allocated Cost of Service Study,

8 Schedules 1-2).

9 **III. CLASS DEMAND STUDY**

10 Q. Please describe the purpose of the Class Demand Study.

11 A. The Class Demand Study presents demand cost responsibility

12 measures for each Company customer service classification

13 ("SC"). These cost responsibility measures, in turn, are

14 used in the ECOS Study presented in this proceeding.

15 Q. Briefly describe the cost responsibility measures

16 developed in the Class Demand Study.

17 A. There are three cost responsibility measures developed in

18 the Class Demand Study. The first reflects class demands

19 at the time of the Company system peak. The second is

20 class non-coincident peak responsibility, which reflects

21 customer demands at times of the individual class peaks.

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 The third, for secondary service customers, reflects a
2 balance between non-coincident peaks and individual
3 customer maximum demands ("ICMDs").

4 Q. Have you prepared an exhibit showing the Class Demand
5 Study?

6 A. Yes. Exhibit ____ (DAC-1) is a document entitled "ORANGE
7 AND ROCKLAND UTILITIES, INC., ELECTRIC CLASS DEMAND STUDY,
8 YEAR 2022."

9 Q. What period does the Class Demand Study cover?

10 A. It covers calendar year 2022, and includes specific
11 analyses of the summer and winter peak periods for that
12 year.

13 Q. Please explain the general organization of Exhibit ____
14 (DAC-1).

15 A. The title page is followed by three pages of explanatory
16 notes and an index for the study's tabular data. Tabular
17 Reports 2 through 4 show step-by-step development of
18 demand cost responsibility measures for each SC. These
19 reports are followed by a Class Demand Summary Report.

20 Q. Please explain the method you used in developing Exhibit
21 ____ (DAC-1).

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 A. The explanatory notes briefly set forth the procedures
2 used to develop the class demand responsibility estimates
3 shown in the exhibit. The discussion includes a short
4 description of O&R's customer load testing program, which
5 is the starting point for many of the calculations in the
6 exhibit. Finally, it provides a brief description of each
7 report in the exhibit.

8 Q. Please explain the analyses shown in Reports 2 through 4.

9 A. These reports show the step-by-step development of demand
10 cost responsibilities for each SC. Data are first
11 organized by energy or demand strata. The strata-level
12 data are then added to develop subclass data, and the
13 subclass data are further aggregated to form class data.
14 Report 2 shows the starting data used in developing the
15 class demand responsibilities, and shows the results of our
16 sample sites by class and stratum. The sample is sourced from
17 the pool of Advanced Metering Infrastructure ("AMI") interval
18 metered customers. Report 3 shows a summary of class
19 population data by stratum for each SC. Finally, Report 4
20 shows the resulting class demand responsibilities by
21 stratum for each SC. Reports 2, 3, and 4 are provided by

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 class for both the summer and winter peak periods. The
2 Class Demand Summary Report provides a summary of the
3 class demand responsibilities for each season, obtained
4 from Report 3 and Report 4.

5 Q. As a typical example of the calculation procedure used for
6 each class in this exhibit, please describe the method
7 employed in developing the summer and winter class demand
8 responsibility estimates for SC No. 1-301, the Residential
9 class.

10 A. Referring first to Report 2 (summer page 1, winter page
11 1), the data in Columns 3 through 9 were developed from
12 load tests that the Company performed on sample
13 residential test customers. Column 2 lists the sample
14 test strata. Columns 3 and 4 show the range of
15 consumption or demand for the customers in each test
16 stratum. Column 5 shows the number of customers in each
17 stratum for which test results were obtained. Column 6
18 shows the calculated average consumption or demand per
19 customer for each test stratum. Columns 7 and 8 show the
20 load test results reduced to average kilowatts per
21 customer for each test stratum. Column 7 lists the

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 average of July and August maximum demands per customer
2 (January and February averages are used for winter).
3 Column 8 lists the maximum coincident demand per customer
4 for each test stratum, based on averages for five selected
5 system peak days for the summer or five selected system
6 peak days for the winter during the test period. Column
7 9, derived from Columns 7 and 8, shows the calculated
8 coincidence factor for each test stratum.

9 Q. Please describe the derivation of the coincidence factors.

10 A. The coincidence factors are derived from interval metered
11 data collected during calendar year 2022. For each
12 stratum of test customers, the recorded half-hourly demand
13 data values obtained from each test location were averaged
14 for the five seasonal system peak days. For this study,
15 the coincidence factor is defined as the ratio of the per-
16 customer maximum coincident half-hour demand of a stratum
17 of test customers, averaged for five days, to the per-
18 customer individual maximum non-coincident half-hour
19 demands of the test customers in that stratum.

20 Q. Please continue your explanation of the SC No. 1-301
21 reports.

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 A. Turning to Report 3, the stratum definitions are shown in
2 columns 3 and 4. The stratum-level customer count and
3 kilowatthour sales for the residential class shown in
4 Columns 5 and 6 are derived from billing records for the
5 year 2022. Column 7 contains the average usage by stratum
6 based on columns 5 and 6. The summer and winter
7 coincident maximum half-hour demands for each stratum in
8 the class population were then calculated using the
9 respective sample test stratum load characteristics.
10 These results appear in Column 11, and the computations
11 are described in footnotes.

12 Q. Please continue.

13 A. Because each stratum's maximum half-hour demand (shown in
14 Column 11) occurs at different times, complete daily
15 profile curves were computed for each stratum in the
16 class, again based on test results. Summation of all 48
17 half-hour stratum load curves at the customers' meters
18 produced composite summer and winter load curves for the
19 entire class. The summer and winter coincident half-hour
20 demands for each stratum, shown in Column 5 of Report 4,
21 were obtained by examining the stratum load curves at the

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 time of the class peak. The summer and winter class load
2 curves were further examined to determine the average
3 class demands for the highest continuous four-hour period.
4 Those results are shown in Column 6 of Report 4.

5 Q. Please continue.

6 A. The demands described so far have all been based on
7 measurements and calculations at the customers' meters.
8 To determine the system input level class responsibility
9 shown in Column 8, the class demand at the customers'
10 meters was divided by the annual distribution efficiency
11 for the class. The class distribution efficiencies are
12 shown in footnotes 8 and 9 of Report 4. After applying
13 class distribution efficiencies, the calculated grand
14 total of all the class load curves, developed through the
15 procedures described thus far, closely approximates, but
16 does not exactly match, the known total system load curve
17 at each half-hour. The total discrepancy during the high
18 load periods of the day is generally found to be a few
19 percent during any half-hour. Accordingly, for sampled
20 classes, a percentage adjustment factor for every half-
21 hour was applied to each of the class demands. Classes

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 that are 100% sampled did not receive any adjustment.

2 After adjusting the class data, the total of all class
3 profiles exactly matched the total system load curve. The
4 demand values in Columns 7, 9, and 10 of Report 4 are the
5 adjusted class demands. These values are the average
6 demands obtained from class load profiles for the four
7 peak hours of the system peak load shape or the class peak
8 load shape.

9 Q. Do the computations and analyses, which you have just
10 described for SC No. 1-301, Residential, apply to the
11 other classes shown in this exhibit?

12 A. Yes. With a few exceptions, which we will describe, the
13 analyses for the remaining classes are similar to those
14 for SC No. 1-301.

15 Q. Please describe the exceptions to which you referred.

16 A. For unmetered classes and traffic signals, a flat load
17 shape was developed. For lighting served under SC Nos. 4
18 and 16, load shapes were developed taking hours of
19 daylight into account.

20 Q. Please describe the contents of the Class Demand Summary
21 Report.

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 A. The Class Demand Summary Report summarizes the seasonal
2 demand responsibilities that were developed in Report 3
3 and Report 4 for each SC.

4 Q. Were any changes in methodology made to the development of
5 demand cost allocation factors?

6 A. No, there were no changes in methodology made to the
7 development of demand cost allocation factors since the
8 last study submitted in Case 21-E-0074.

9 **IV. ECOS STUDY**

10 Q. Did you perform an ECOS Study for this proceeding?

11 A. Yes, we did. Exhibit ____ (DAC-2) is entitled "Orange and
12 Rockland Utilities, Inc. - Embedded Cost-of-Service Study
13 and Unbundled Cost Components."

14 Q. Please explain the general organization of the ECOS Study.

15 A. The ECOS Study begins with explanatory notes detailing
16 sources of data and methods used in the preparation of the
17 Study followed by seven tables of cost data.

18 Q. Please describe the ECOS Study and its unbundled cost
19 components.

20 A. The ECOS Study consists of three schedules. Schedule 1
21 shows the results of the ECOS Study. Schedule 2 shows the

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 Merchant Function Charge ("MFC") calculations. Schedule 3
2 shows unbundled costs for printing and mailing a bill and
3 receipts processing functions.

4 Q. What cost categories are analyzed in the ECOS Study?

5 A. The ECOS Study analyzes costs and revenues associated with
6 the Company's delivery system (*i.e.*, transmission and
7 distribution), and customer-related cost categories or
8 functions. It also includes cost categories related to
9 the electric merchant function, receipts processing and
10 printing and mailing a bill functions. Because the ECOS
11 Study strictly focuses on transmission and distribution,
12 the major supply functional costs, *e.g.*, purchased power
13 and generation costs are not included in the ECOS Study.

14 Q. What time period does the ECOS Study cover?

15 A. It covers calendar year 2022.

16 Q. What electric revenues are reflected in the ECOS Study?

17 A. Electric revenues reflect current delivery rates, which
18 went into effect January 1, 2024.

19 Q. What customer classes are analyzed in the ECOS Study?

20 A. The Study analyzes classes of customers corresponding to
21 the SCs contained in Orange and Rockland's electric rate

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 schedules, including retail access customers. A
2 description of the type of customers served under each SC
3 is shown beginning on page 11 of the ECOS Study's
4 explanatory notes.

5 Q. Did the Panel make any methodological changes to the ECOS
6 Study since the Company's last filing?

7 A. Yes. The Joint Proposal adopted by the Commission in Case
8 21-E-0074 provided for the elimination of competitive
9 meter ownership charges. The costs associated with the
10 corresponding function have been reassigned to the
11 metering function.

12 Q. How are the results of the ECOS Study expressed?

13 A. The results of the ECOS Study are expressed as total
14 Company ("total system") and class rates-of-return.

15 Q. What is the total system rate of return shown in the ECOS
16 Study?

17 A. The total system rate-of-return is 8.43%, as shown on
18 Table 1, Page 1, Column (1), Line 17 of the ECOS Study. In
19 addition, Table 1 sets forth rates-of-return for all
20 classes included in the ECOS Study. For example, the SC
21 No. 1 - Residential General return is 7.23%, the SC No. 2

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 - C&I Secondary return is 12.85%, the SC No. 9 -
2 Commercial return is 9.62%, and the SC No. 22 - Industrial
3 return is 5.60%.

4 Q. Has the NYPSC historically approved "tolerance bands"
5 around the system rate-of-return in developing class
6 revenue responsibilities?

7 A. Yes. Based on past practice, class revenue responsibility
8 has been measured with respect to a ±10% tolerance band
9 around the total system rate-of-return. Classes would not
10 be considered "surplus" or "deficient" if the class ECOS
11 rate-of-return falls within this tolerance band. Classes
12 that fall outside this range would be either surplus or
13 deficient by the revenue amount, including appropriate
14 state and federal income taxes, necessary to bring the
15 realized return to the upper or lower limit of the band.
16 We propose to continue this practice in this case.

17 Q. Based on the application of the ±10% tolerance band around
18 the calculated total system rate of return of 8.43%, what
19 are the ECOS study class surpluses and deficiencies?

20 A. The revenue surpluses are shown on Table 1, Line 26 and
21 the revenue deficiencies are shown on Line 27. For

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 example, the SC No. 2 - C&I Secondary class has a revenue
2 surplus of \$9,597,723, while the SC No. 1- Residential
3 General class has a revenue deficiency of \$3,026,999.

4 Q. What is the significance, for example, of the SC No. 1-
5 Residential General class deficiency?

6 A. The deficiency is the amount of revenue increase, at
7 current rates, required to bring the SC No. 1- Residential
8 General class return to the lower level of the tolerance
9 band around the system rate-of-return.

10 Q. Please describe what is shown on Table 1A, which is the
11 last page of Exhibit____ (DAC-2), Schedule 1.

12 A. Due to the application of class tolerance bands, the total
13 of the ECOS surpluses and deficiencies is a net surplus.
14 In order that ECOS Study indications are revenue neutral
15 to the Company, Table 1A adjusts classes with a rate of
16 return below the system average based on their respective
17 non-competitive delivery revenues used in the ECOS Study
18 so that the sum of surpluses matches the sum of
19 deficiencies.

20 Q. Please continue with your explanation of Table 1A.

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 A. A check was made to make sure that classes affected by the
2 adjustment described above remained within the tolerance
3 band after reflecting the adjustments shown in Table 1A.
4 The adjusted ECOS study indications are used in revenue
5 allocation as described in the testimony of the Electric
6 Rate Panel.

7 Q. Let us now turn to the methodology used in developing the
8 ECOS Study. Please describe the procedures followed in
9 the preparation of the ECOS Study.

10 A. There are two main steps in the preparation of the ECOS
11 Study: (1) functionalization and classification of costs
12 to operating functions, such as transmission,
13 distribution, customer accounting and customer service
14 with further division into sub-functions, such as
15 distribution demand, distribution customer, services,
16 overhead and underground; and (2) allocation of these
17 functionalized costs to customer classes.

18 Q. Please describe the functionalization and classification
19 step.

20 A. The functionalization and classification step assigns the
21 broad accounting-based cost categories to the more

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 detailed categories employed in the ECOS Study. This
2 level of detail is required to differentiate, for example,
3 demand-related costs from customer-related costs.

4 Q. Why is this necessary?

5 A. This provides for the proper allocation to the classes of
6 the fixed and variable costs, *i.e.*, operation and
7 maintenance ("O&M") expense, based on cost causation.

8 Q. Please continue.

9 A. During the process of functionalization, all costs are
10 classified as being demand-related, energy-related or
11 customer-related. Demand-related costs are fixed costs
12 resulting from the loads placed on the various components
13 of the electric system. Energy-related costs are variable
14 costs resulting from the total kilowatthours delivered
15 during the year. Customer-related costs are fixed costs,
16 which are caused by the presence of customers connected to
17 the system, regardless of the amounts of their demand or
18 energy usage.

19 Q. Please describe the allocation step in the ECOS Study.

20 A. This step allocates the functionalized and classified
21 costs to the customer classes based on the appropriate

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 demand, energy or customer allocation factors, which are
2 shown on Table 7 of the ECOS Study.

3 Q. Does the ECOS Study present unbundled functional costs for
4 competitive services as set forth in the Unbundling Policy
5 Statement?

6 A. Yes. The ECOS Study separately identifies the following
7 competitive functions: merchant function, receipts
8 processing, and printing and mailing a bill.

9 Q. What costs are included in the merchant function?

10 A. The merchant function contains costs associated with
11 procuring electric commodity, including an allocation of
12 customer care-related activities, customer service-related
13 activities, and information technology ("IT").

14 Q. What costs are included in the allocation of customer care
15 and customer service-related activities?

16 A. The customer care allocation includes costs associated
17 with the Company's call centers, service centers, and
18 credit and collections activities. The customer service
19 allocation includes an assignment of education and
20 outreach costs.

21 Q. How were these costs allocated to the merchant function?

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 A. Pursuant to the Unbundling Policy Statement, customer care
2 and customer service-related costs were allocated to the
3 merchant function on the basis of total revenues,
4 including commodity revenues.

5 Q. How were IT costs allocated to the merchant function?

6 A. Pursuant to the Unbundling Policy Statement, IT costs were
7 allocated on the basis of total revenues, with 50 percent
8 of the resultant allocation included in the merchant
9 function.

10 Q. Have you further unbundled the merchant function for use
11 in developing rate components for competitive services?

12 A. Yes. Separate MFCs to recover the costs for two
13 commodity-related competitive services as described below
14 were developed for (1) SC No. 1 Total Residential and SC
15 No. 19 Residential Voluntary Time of Use, (2) SC No. 2
16 Secondary, SC No. 20 Secondary Voluntary Time of Use, SC
17 No. 4 Municipal Lighting, SC No. 5 Municipal and Private
18 Lighting, SC No. 6 Municipal Owned Street Lighting and SC
19 No. 16 Public and Private Lighting and SC No. 16 Energy
20 Only and (3) SC No. 2 Primary, SC No. 3 Primary, SC No. 9

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 Commercial, SC No. 21 Primary Voluntary Time of Use and SC
2 No. 22 Industrial.

3 Q. How have you defined these costs?

4 A. The MFC is made up of two components. The first consists
5 of the costs associated with procuring commodity, IT, and
6 education and outreach (hereafter referred to as the
7 "competitive supply-related MFC component"). The second
8 consists of costs associated with credit and collections
9 (hereafter referred to as the "competitive credit and
10 collections-related MFC component"). Only full service
11 customers pay both the competitive supply-related and
12 competitive credit and collections-related MFC components.

13 Q. How are these components allocated to the SCs within the
14 ECOS Study?

15 A. One hundred percent of electric procurement activity costs
16 and 25 percent of credit and collections, IT, and
17 education and outreach costs were allocated on a per
18 kilowatthour basis. The remaining 75 percent of credit
19 and collections, IT, and education and outreach costs were
20 allocated on a per customer basis.

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 Q. Why were the customer care-type costs, such as credit and
2 collections, allocated predominantly on the basis of
3 number of customers, while the electric procurement
4 activity was allocated entirely on a volumetric (*i.e.*, kWh
5 consumption) basis?

6 A. The Company followed basic cost causation principles and
7 determined that customer care-type activities are
8 predominantly driven by the existence of customers on the
9 system as opposed to their usage characteristics. On the
10 other hand, the functional cost of purchasing commodity is
11 aligned with sales volumes. This allocation is consistent
12 with the NYPSC's Order Adopting Unbundled Rates and
13 Backout Credits and Specifying Terms for the Recovery of
14 Revenues Lost As a Result of Such Rates and Credits,
15 issued April 15, 2005, in Case 04-E-0572, approving Con
16 Edison's unbundled rates.

17 Q. Is the allocation of the MFC components to various groups
18 of customers shown in Exhibit __ (DAC-2), Schedule 2?

19 A. Yes. Exhibit __ (DAC-2), Schedule 2, pages 1 and 2, show
20 the allocation of the competitive supply-related MFC cost
21 components and the competitive credit and collections-

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 related MFC cost components to the residential and
2 commercial categories of customers. This exhibit presents
3 these two components as percentages of the transmission
4 and distribution ("T&D") and competitive revenues (*i.e.*,
5 MFC, Metering and BPP revenues) associated with SCs under
6 the Company's electric tariff as used in the ECOS Study.
7 POR Discount Credit and Collections revenues are added to
8 the delivery revenues to calculate competitive credit and
9 collections-related percentage. Separate percentages are
10 shown for the previously mentioned groups of customers for
11 use in the development of the MFC, as detailed in the
12 Electric Rate Panel's testimony.

13 Q. Is the allocation of unbundled costs for the printing and
14 mailing a bill and receipts processing functions shown on
15 Exhibit ____ (DAC-2), Schedule 3?

16 A. Yes. Schedule 3 of Exhibit ____ (DAC-2), pages 1 and 2
17 show the unbundled costs for printing and mailing a bill
18 and receipts processing functions. The printing and
19 mailing a bill function and the receipts processing
20 function consist of the customer accounting expense of
21 accepting customer payments and billing customers,

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 including both direct costs and an allocation for Call
2 Center and Service Center operations. Credit and
3 collections, education and outreach, and uncollectibles
4 expenses were allocated to these functions on the basis of
5 functional revenues. The unbundled average unit cost for
6 receipts processing is \$1.38 per bill. The average unit
7 cost for printing and mailing a bill is 71 cents per bill.
8 These two functions are combined to yield \$2.09 per bill
9 in unbundled costs associated with billing and payment
10 processing. The costs associated with billing and payment
11 processing do not vary by SC and, thus, the system-wide
12 \$2.09 per bill in unbundled costs is applicable to all
13 SCs.

14 Q. The Joint Proposal adopted by the NYPSC in Case 21-E-0074,
15 requires that the "Company will provide for illustrative
16 purposes, an alternative ECOS study that excludes T&D
17 components from customer-related costs (*i.e.*, the ECOS
18 study does not make use of the minimum system methodology)
19 and poles (FERC Account 364), conductors (FERC Accounts
20 365, 366, 367) and transformers (FERC Account (368) are

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 classified as entirely demand-related)." Did you prepare
2 this alternate ECOS study?

3 A. Yes. Please refer to Exhibit ___ (DAC-2), Schedule 1,
4 Supplemental.

5 Q. Does the Company support or otherwise endorse the
6 methodology employed in this alternate ECOS study which
7 classifies distribution poles, conductors, and
8 transformers as entirely demand-related?

9 A. No. The alternate ECOS study does not recognize that a
10 portion of distribution assets are fixed in nature. In
11 other words, customers are responsible for paying their
12 fair share to be connected to the Company's distribution
13 system. Excluding a minimum system customer component
14 fails to recognize that a minimum size distribution system
15 is required due to the presence of customers connected to
16 the Company's distribution system regardless of customer
17 demand.

18 Q. Is the Company's method for classifying and allocating
19 distribution assets consistent with industry standards?

20 A. Yes. The Company's ECOS study follows the principles set
21 forth in the Electric Utility Cost Allocation Manual

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 prepared by the National Association of Regulatory Utility
2 Commissioners ("NARUC"), which recognizes (p. 87) that a
3 portion of distribution poles, conduit, conductors, and
4 transformers be classified as customer-related.

5 Additionally, the minimum system methodology employed by
6 the Company was litigated in a rate case involving the
7 Company's affiliate, Consolidated Edison Company of New
8 York, Inc., Case 16-E-0060, culminating with the
9 Commission rejecting opposition to this methodology. In
10 the same case, the Commission further reaffirmed its
11 support for the minimum system methodology pertaining to
12 line transformers in its Order Denying Rehearing and
13 Clarifying Prior Order, issued on September 20, 2017.
14 While specifically referring to transformer costs, this
15 determination is applicable to all components of the
16 minimum system.

17 Q. Does the Company support either the methodology or the
18 results of the alternate ECOS study?

19 A. No. The Company opposes the methodology and results of
20 this alternate ECOS study or any rate design based
21 thereon.

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

V. SEASONAL RATE STUDY

1

2 Q. Have you prepared an exhibit showing the Seasonal Rate
3 Study?

4 A. Yes. Exhibit ____ (DAC-3) is entitled the "Seasonal Rate
5 Study."

6 Q. Please provide some background on the Seasonal Rate Study.

7 A. The Joint Proposal adopted by the Commission in Case 21-E-
8 0074 required the Company to study the cost basis for
9 seasonal differentials in its electric tariff. Pursuant
10 to the Joint Proposal, on April 14, 2023 the Company
11 submitted its Seasonal Rate Study based on its 2019 Demand
12 Analysis and ECOS study. On June 27, 2023 the Company
13 held a meeting with interested parties to discuss the
14 methodology used to develop the study and its results.

15 Q. Please continue.

16 A. The Seasonal Rate Study being submitted in this proceeding
17 is an update of the Seasonal Rate Study described above.
18 It uses the same methodology and is based on the 2022
19 Demand Analysis and ECOS study exhibits sponsored by the
20 Panel in this testimony.
21 The Company's proposed methodology to study seasonal rate

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 differentials in its tariffs is based on a comparison of
2 seasonal differentials in current rates to those exhibited
3 in the Company's ECOS study. The class-specific seasonal
4 delivery revenue ratios shown in Exhibit___(DAC-3) reflect
5 the ratio of monthly summer delivery revenue to monthly
6 winter delivery revenue based on 2022 customer usage
7 priced at delivery rates which went into effect January 1,
8 2024. This is consistent with revenues used to develop
9 the ECOS study.

10 The class-specific seasonal cost ratios shown on Exhibit
11 ___ (DAC-3) reflect the ratio of monthly summer costs to
12 monthly winter costs based on the 2022 ECOS study and
13 Demand Analysis. These ratios were developed based on
14 classification of demand-related costs into load carrying
15 facilities that were deemed to exhibit seasonal
16 differences; and customer-related costs into non-load
17 carrying facilities that do not exhibit seasonal
18 differences and remain constant throughout the year.

19 Q. Is the Panel making any recommendations based on the
20 Seasonal Rate Study filed in this case?

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 A. Yes. The results of the study indicate two service classes
2 where summer/winter ratios currently embedded in rates
3 exceed cost-based summer/winter ratios. Therefore, the
4 Panel recommends that seasonal rate differentials for SC
5 No. 20 TOU and SC No. 21 TOU be adjusted to begin to
6 gradually approach cost-based indications. The testimony
7 of the Electric Rate Panel will describe these
8 adjustments.

9 **VI. ACOS STUDY**

10 Q. Have you prepared an exhibit showing the Allocated Cost of
11 Service Study as prescribed in the Commission's October
12 13, 2023 Order Establishing Updated Standby Service Rates
13 and Implementing Optional Mass Market Demand Rates ("2023
14 Standby Order")?

15 A. Yes. Exhibit ____ (DAC-4) is entitled the "Allocated Cost
16 of Service Study."

17 Q. Please provide some background on the ACOS Study.

18 A. The 2023 Standby Order established an ACOS methodology
19 based on a series of decision tree questions to determine
20 how embedded costs are allocated to the shared, local, and
21 customer cost categories for use in developing standby

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 daily as-used demand charges and contract demand charges.
2 The Company relied on its 2022 ECOS study, presented here
3 as Exhibit ____ (DAC-2), Schedule 1 and associated demand
4 analysis, presented as Exhibit ____ (DAC-1) in this filing
5 to develop Exhibit ____ (DAC-4).

6 Q. Please continue.

7 A. The ACOS study presented in this filing uses, where
8 appropriate, Federal Energy Regulatory Commission ("FERC")
9 Account level historical costs from the ECOS study and
10 further assigns them to customer, local and/or shared
11 components based on the decision tree questions specified
12 in the 2023 Standby Order. Exhibit ____ (DAC-4), Schedule
13 1 provides explanations to support answers to
14 interconnection voltage and higher than interconnection
15 voltage decision tree questions as they relate to various
16 FERC Account level costs and associated service classes
17 reflected in the ACOS study. The Company reserves the
18 right to change its answers to decision tree questions in
19 future ACOS studies as the standby rate proceeding is
20 ongoing and the decision tree questions are subject to
21 further revision by the Commission.

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

Pages 1 through 4 of Exhibit ____ (DAC-4), Schedule 2 present the cost allocation matrixes resulting from the application of the coincident peak/non-coincident peak ("CP/NCP") allocator adopted by the 2023 Standby Order at each service class's interconnection voltage level, as well as the buyback cost allocation matrixes. Page 5 of Exhibit ____ (DAC-4), Schedule 2 presents the development of ACOS customer costs, reflecting the classification of administrative and general costs as entirely customer-related based on the ACOS methodology. The results of the ACOS study, as presented in Exhibit ____ (DAC-4), are incorporated into the design of standby and buyback rates as described in the testimony of the Electric Rates Panel.

VII. MARGINAL COST OF SERVICE STUDY

Q. Did you perform an analysis of the marginal cost to supply an additional kW of load on the T&D delivery system?

A. No. Currently, there is considerable uncertainty around the technical aspects of distribution marginal cost estimation, as expressed in the Staff Whitepaper Regarding Future Value Stack Compensation, Including For Avoided Distribution Costs, filed December 12, 2018, in Case 15-E-

ORANGE AND ROCKLAND UTILITIES, INC.
DIRECT TESTIMONY OF
DEMAND ANALYSIS AND COST OF SERVICE PANEL - ELECTRIC

1 0751. The ongoing Marginal Cost of Service ("MCOS")
2 proceeding, Case 19-E-0283, has restarted with the
3 issuance of a Staff Whitepaper Regarding Marginal Cost Of
4 Service Studies, filed March 27, 2023 ("2023 Staff
5 Whitepaper"). In this whitepaper, Staff has proposed
6 changes to the marginal cost of service methodology
7 traditionally employed by the Company. To date,
8 stakeholders, including the Joint Utilities, have filed
9 several rounds of comments on the 2023 Staff Whitepaper.
10 Accordingly, the Company has not developed a new electric
11 marginal cost study for this rate case. Once the MCOS
12 Proceeding is concluded, the Company will develop a new
13 MCOS study in accordance to the terms of the resultant
14 NYPSC Order in that case.

15 Q. Does this conclude your direct testimony?

16 A. Yes, it does.

EXHIBIT ____ (DAC -1)

ORANGE AND ROCKLAND UTILITIES, INC.

ELECTRIC CLASS DEMAND STUDY

YEAR 2022

ORANGE AND ROCKLAND UTILITIES, INC.

Electric Class Demand Estimates
Analyzed by Customer Service Classification
Year 2022

Basis for Calculations

The class demand estimates presented in this exhibit are based upon studies of sample AMI test customers' interval data. These profile data have been extrapolated to the appropriate 2022 class populations obtained from billing records.

Sample test data are used to estimate class demands for Orange and Rockland Service Classification Nos. 1, 2 (except 2-802, Not Metered), 3, 9, 19, 20, and 21. Profile data for selected summer and winter peak days were used to calculate demands for Orange and Rockland Service Classification No. 22 and West Point, and for customers eligible for mandatory day-ahead hourly pricing. Calculations for Orange and Rockland Service Classification No. 2-802 (Not Metered), 4, 5, 6, and 16 used day-lighting schedules for street lighting and 24-hour demand estimates for traffic signals.

Sample Test Data

For the sampled classes, the test customers were selected by statistically sampling the class populations. Orange and Rockland test customers were arranged and stratified according to system peak month ranges. Test customer daily load profiles were collected for a complete annual period. Class test data were arranged according to the five summer and winter system peak days, with Saturdays, Sundays, and holidays excluded. Load characteristics were calculated for each stratum.

Application of Test Results

The load test summer and winter coincidence factors and load characteristics have been applied to the individual customers' non-coincident summer and winter (billing) demands for the year 2022 in the corresponding classes after each class' customers were arranged and stratified in the same manner as the test customers. Summation of the stratum load curves, extrapolated to class proportions for each class, produced summer and winter daily load profiles for that class at the customers' meters.

Development of Total System Service Area Distribution Curves

Peak-day curves were prepared from 2022 integrated hourly system demands. The total system service area distribution curves were developed by averaging the system demand data for five selected summer weekdays and five selected winter weekdays. These data

include the kilowatt input (including losses) to our entire transmission and distribution system, as metered at the system input level.

In selecting the five specific summer and winter peak days to be averaged those with the highest one-hour net load were chosen. The data for all five days were averaged to rule out the effect of any unusual system conditions that might have occurred for short periods during any one of the selected days.

Class Loads at the System Input Level

Employing the class load curves at the customers' meters and the distribution efficiencies (losses), class load curves for the summer and winter were developed as they appeared at the system input level. The sum of the class load curves at the system input level was determined for the fully sampled sub-classes of Orange and Rockland Service Classifications Nos. 2, 3, 4, 5, 6, 16, 22, and West Point.

This sum was subtracted from the curve representing the (summer or winter) total system service area distribution curve and the resultant curve was then compared to the sum of the class load curves at the system input level for the remaining sub-classes of Orange and Rockland Service Classification Nos. 1, 2, 3, 9, 19, 20, 21, and 22.

For sampled classes, a percentage adjustment factor was applied to the class demands for every half-hour. The sum of the 'adjusted classes' and the 'fully sampled' classes exactly equaled the total system service area distribution curve.

Four-Hour Class Non-Coincident Peak Demands and System Summer Peak Responsibility Demands

After developing the class load profile curves for the summer and winter as described above, the numerical half-hour demand values from the curves were examined. Four-hour class non-coincident peak demands for the summer and winter and four-hour system summer peak responsibility demands (for summer half-hours ending 4:30 PM to 8:00 PM) were calculated from these values. The four-hour figures were obtained by averaging eight consecutive half-hour demands. The four-hour demand figures are shown in the Class Demand Summary report.

Description of Reports

Report 2 - Sample Test Customer Data

These reports show a summary of load research data by stratum for each service classification for the summer and winter periods.

Report 3 - Estimated Class Demand Data

This report shows a summary of class population data by stratum for each service classification for the summer and winter periods.

Report 4 - Estimated Class Demand Data

This report shows a summary of class demand responsibilities by stratum for each service classification for the summer and winter periods. Demands at the customer and at the system input level are shown.

Class Demand Summary Report

This report shows a summary of the class demand responsibilities for the summer and winter periods.

ORANGE AND ROCKLAND UTILITIES, INC.
EMBEDDED COST OF SERVICE STUDY
ELECTRIC DEPARTMENT
YEAR 2022

I - SUMMARY

The Embedded Cost of Service (ECOS) study allocates Orange and Rockland's Utilities, Inc., (O&R) Electric Department's costs among their respective service classifications based on an analysis of the rate base, including book cost of plant, and the operating expenses, including operation and maintenance for the Electric Department for the calendar year 2022. The ECOS study methodology is based on a two-step procedure. First, the costs are functionalized and classified to **Operating Functions**, as shown in the ECOS study on **Tables 2** through **5**. Along with traditional functions, the study also includes fully unbundled competitive merchant function, printing and mailing a bill and receipts processing functions. The costs within each function are then allocated to **Customer Classes** based on appropriate physical quantities, such as kW demand, or other appropriate bases of allocation, such as book cost of meters. The bases of cost allocation are shown in detail on **Table 7** as **Allocation Factors** and are further described below. The details of allocations by customer class are shown on **Tables 2** through **5**. The results of the cost allocation step are combined with class revenues to yield the rate of return statement by class shown on **Table 1**. The monthly average **Customer Costs by Class** are shown on **Table 6**. The costs allocated in the ECOS study reflect 2022 booked data. The revenues reflect current rates, i.e. rates effective January 1, 2024. This adjustment is needed to ensure that the study reflects current rate levels and shows the correct relationship among service classifications. These revenues comprise the annual sales revenues for Orange and Rockland's service. They exclude all MSC/ECA, System Benefits Charge (SBC), and represent merchant function, competitive metering, billing and payment processing, transmission, distribution, and customer revenue requirement. For purposes of unbundling, total revenues are used to allocate customer-care related expenses, i.e., credit & collections, to competitive functions as determined by the Public Service Commission's Unbundling Order.

II - DESCRIPTION OF OPERATING FUNCTIONS – Tables 2, 3 and 5

The operating functions shown on **Table 2, Rate Base, Table 3, Operating Expenses, and Table 5, Income Taxes** (State and Federal) are described below. Where applicable, these functions include fixed costs including an allocation of common plant, associated operating expenses, A & G expenses, state income taxes (“SIT”) and federal income taxes (“FIT”).

Line 1, Merchant Function

The Merchant function includes the costs associated with commodity billing and analysis, and commodity procurement and scheduling. Also included is a revenue-based allocation of credit & collections, IT, and education & promotional advertising. This function is allocated to classes based on a hybrid allocator, which includes procurement costs being allocated 100% on annual full-service sales, while the revenue-based adders of credit & collections, IT and education & promotional advertising are allocated 25% on annual full-service sales and 75% on number of full-service customers.

Line 2, Transmission

The Transmission function represents the fixed costs for interconnecting the transmission system to generating stations and other utilities.

Line 3, Substation

The Substation function represents the fixed costs associated with Land and Land Rights, Structures and Improvements, Station Equipment and Storage and Battery Distribution Equipment.

High Tension System

Line 4, High Tension OH/UG - Demand

Line 5, High Tension OH/UG - Customer

The High-Tension function includes the costs of primary feeders that provide the source of supply from substations to high tension customers and radial transformers. These costs are further divided into a demand and customer component using a minimum system concept.

Low Tension Distribution System:

Line 6, Transformers – O.H. Demand

Line 7, Transformers – U.G. Demand

The fixed costs for the above functions are subdivided to show separately the functions associated with the overhead (OH) and underground (UG) line transformers. The demand component includes the portion of transformers above the minimum system.

Line 8, Transformers – O.H. Customer

Line 9, Transformers – U.G. Customer

The fixed costs for these functions are considered to be joint customer costs as distinguished from direct customer costs, since they represent the estimated costs of the minimum-size, jointly-used line transformers needed to connect customers to the distribution system under the existing conditions of customer density and geographical dispersion. Expressed in another manner, the customer component is the cost of the secondary system theoretically needed to physically connect all the existing service points.

Line 10, O.H. Lines Demand

Line 11, U.G. Lines Demand

The fixed costs for the above functions are subdivided to show separately the functions associated with the overhead (OH) and underground (UG) lines. The demand component includes the secondary system for OH and UG Lines above the minimum system.

Line 12, O.H. Lines Customer

Line 13, U.G. Lines Customer

The fixed costs for these functions are considered to be joint customer costs as distinguished from direct customer costs, since they represent the estimated costs of the minimum-size, jointly-used distribution lines needed to connect customers to the distribution system under the existing conditions of customer density and geographical dispersion. Expressed in another manner, the customer component is the cost of the secondary system theoretically needed to physically connect all the existing service points.

Line 14, Services – O.H.

Line 15, Services – U.G.

These fixed costs represent overhead and underground service connections. The costs for these functions are considered direct customer costs since service connections attach the customer to the distribution system.

Line 16, Metering

The Metering function consists of costs associated with the fixed costs of meters and meter installations. Costs for this function are considered direct customer costs.

Line 17, Install. on Custr. Premises

The Installations on Customers' Premises function includes fixed costs for equipment installed on customers' premises. These costs are considered direct customer costs.

Line 18, Street Lighting

The Street Lighting function includes fixed costs for street lighting and signal systems.

Line 19, Customer Accounting

The Customer Accounting function consists of direct customer costs of customer records and collection expenses and meter reading. The function was reduced for Receipts Processing and Printing & Mailing a Bill expenses, as these costs were assigned directly to their respective functions. Credit and collections costs were allocated to competitive functions based on a revenue allocation. The remaining costs, which are direct customer costs were assigned to customer classes based on the number of meters and total number of customers as applicable.

Line 20, Printing & Mailing a Bill

The Printing & Mailing a Bill function consists of the customer accounting expense of billing customers, as well as allocations for call center and service center operations and IT, all based on a detailed study of those activities. Also included is a revenue-based allocation of credit & collection, uncollectibles and education & promotional advertising. Printing & Mailing a Bill is a direct customer cost. This function is allocated to classes based on the number of bills.

Line 21, Receipts Processing

The Receipts Processing function consists of the customer accounting expense of accepting customer payments. It also includes allocations of call center and service center operations and IT, all based on detailed study of those activities. Also included is a revenue-based allocation of credit & collection, uncollectibles, and education & promotional advertising. Receipts Processing is a direct customer cost. This function is allocated to classes based on the number of bills.

Line 22, Uncollectibles

The Uncollectibles function includes operation and maintenance expenses for uncollectibles accounts. Uncollectibles associated with commodity have been adjusted out of the study. A portion of uncollectibles was allocated on a revenue basis to competitive functions. The remaining expense, shown on Line 22, has been allocated to classes on a revenue basis to reflect the comparative relationship between the uncollectible characteristics of residential classes (0.84%) and non-residential classes (0.38%).

Line 23, Customer Service

The Customer Service function consists of customer assistance expenses, informational and instructional expenses, miscellaneous customer service and information expense. Educational customer advertising costs were allocated to competitive functions based on a revenue allocation. The remaining costs, which are direct customer costs were allocated to the customer classes based on the number of customers.

Line 24, Revenues

The Revenue function is non-applicable for this study.

III - DESCRIPTION OF ALLOCATION FACTORS - Table 7

<u>Factor</u>	<u>Description and Source</u>
D01	<u>Transmission</u> The D01, Transmission, allocation factor, summer system peak responsibility demand, is based on the highest five day, four –hour averages.
D04	<u>Substation</u> The D04, Substation, allocation factor is based on the non-coincident maximum summer or winter high tension class demand.
D02	<u>High Tension - Demand</u> The D02, High Tension, allocation factor is based on the non-coincident maximum summer or winter high tension class demand.
D03	<u>Low Tension - Overhead & Underground</u> The D03, Low Tension – Overhead and Underground, allocation factor is based on the average of non-coincident maximum class demands and individual customer billing demands for summer and winter seasons.
E01	<u>kWh Sales</u> The E01, Annual kWh Sales, is the total annual kilowatt-hour sales for O&R service classes.
C01	<u>Overhead and Underground Lines Customer - Primary</u> The C01 Primary – Customer Component allocation factor represents the sum of customer-related primary overhead assets, allocated to service classes based on the number of overhead services, and customer-related primary underground assets, allocated to classes based on the number of underground services.

C02

Overhead Lines Customer - Secondary

C03

Underground Lines Customer - Secondary

C02 and C03 allocation factors are based on the number of overhead and underground services excluding primary, commercial and industrial classes. The number of services installed for each class was estimated based on a statistically significant sample of service connections across O&R's service territory. By cross-referencing records of customer locations in the Company's mapping, property records and customer billing systems, we were able to determine the number of services used in connecting customers in the sample to the Company's distribution system.

C04

Book Cost – Services Overhead

C05

Book Cost – Services Underground

The C04 and C05 allocation factors are based on the year end book cost for overhead and underground services developed using the sample services study. The cost of services installed for each class was estimated based on a statistically significant sample of service connections across O&R's service territory. By cross-referencing records of customer locations in the Company's mapping, property records and customer billing systems, we were able to determine the book cost of services used in connecting customers in the sample to the Company's distribution system.

C06

Book Cost - Install. on Customers' Premises

The C06, Installations on Customers' Premises, allocation factor is based on the number of customers excluding lighting, and certain

commercial and industrial service classifications, as well as West Point.

C07

Book Cost – Street Lighting

The C07, Street Lighting, allocation factor is allocated to the applicable lighting classes based on their respective individual customer maximum demands.

S02

Number of Bills Customer

The S02, allocation factor was developed based on number of customer bills and is used to allocate to the service classes the Printing and Mailing a Bill and Receipts Processing functions.

S03

Customer Accounting

The S03, Customer Accounting, allocation factor was developed by allocating the PSC accounts that comprise the total customer accounting expenses, excluding receipts processing and printing and mailing a bill costs. The allocation factor consists of PSC Account 902, Meter Reading, allocated to the service classes based on the number of meters, PSC Account 903, Customer Records, allocated based on the number of customers, PSC Account 901, Supervision, and PSC Account 905, Miscellaneous, allocated based on the sum of allocations of PSC Account 902 and PSC Account 903.

S04

Customer Service Expenses

The S04, Customer Service Expenses, allocation factor is developed by allocating annual customer service expenses to customer classes based on their respective number of customers.

S05

Metering

The S05, Metering allocation factor is developed using a detailed study of the year-end book cost of meters and meter installations for each service classification.

S012**Uncollectibles Accounts**

The S012, Uncollectibles, allocation factor is developed on a revenue basis to reflect the comparative relationship between uncollectible characteristics of residential (0.84%) and non-residential (0.38%) service classes.

The Uncollectibles function includes the operation and maintenance expenses for uncollectibles accounts, excluding uncollectibles associated with commodity.

R01**Revenues from Sales**

The R01, Revenues from Sales are annual T&D revenues (2022 annual sales priced out at current T&D rates) used in the study.

R02**Other Electric Revenues**

The R02, Other Electric Revenues are comprised of miscellaneous revenue items allocated to the revenue function.

R03**Competitive MFC Revenues**

The R03, Competitive MFC Revenues are the revenues associated with the Merchant Function Charge (excluding uncollectibles associated with commodity).

R04**Competitive Metering Revenues**

The R04, Competitive Metering Revenues are the revenues associated with competitive metering.

R05**Competitive BPP Revenues**

The R05, Competitive BBP Revenues are the revenues associated with competitive billing and payment processing revenues received from customers.

U01**Unbundled Allocator**

U01, the Unbundled Allocator, is used to allocate the unbundled Merchant function. It is composed of procurement costs (allocated to service classes based on full service annual kWh sales); commodity-related credit & collections, IT and education & promotional advertising costs and are all allocated to classes based on 25% full-service sales and 75% full-service customers.

K01**Number of Customers**

K01, Number of Customers, is the annual number of customers for O&R service classes.

IV - DESCRIPTION OF CUSTOMER CLASSES

The customer classes consist of: Total Company, Total Residential, Total C&I, Total C&I Primary, Total Municipal Street Lighting, Total Municipal & Private Traffic Lighting, Total Commercial, Total Lighting, Total Industrial, West Point, Residential S.C. No. 1 – General, Residential S.C. No. 19 – Voluntary TOU, C&I S.C. No. 2 – Secondary, C&I S.C. No. 2 – Primary, C&I S.C. No. 2 – With Space Heating, C&I S.C. No. 2 – Secondary Non Demand Billed, C&I S.C. No. 20 – Secondary Voluntary TOU, C&I S.C. No. 3 Primary, C&I S.C. No. 21 – Primary Voluntary TOU, S.C. No. 4 – Municipal Street Lighting, S.C. No. 5 – Municipal and Private Traffic Lighting, S. C 6 – Municipal Owned Street Lighting, S.C. No. 9 – Commercial, S.C. No. 16 – Public & Private Lighting, S.C. No. 16 – Energy Lighting, S.C. No. 22 – Industrial.

V – RATE OF RETURN STATEMENT – Table 1

The class allocations of the functional elements shown on **Table 2, Total Rate Base**; **Table 3, Operating Expenses**; **Table 4, Operating Revenues**; and **Table 5, State & Federal Income Taxes**, were consolidated and tabulated in summary form on the **Rate of Return Statement, Table 1** detailed below:

Line 1, Total Operating Revenues

Total Operating Revenues are from **Table 4, Line 7**.

Line 4, Operation & Maintenance

Total Operation & Maintenance Expenses are from **Table 3, Pages 1 through 7, Line 31**.

Line 5, Depreciation & Amortization

Total Depreciation & Amortization are from **Table 3, Pages 8 through 14, Line 31**.

Line 6, Property Taxes

Total Property Taxes are from **Table 3, Pages 15 through 21, Line 31**.

Line 7, Payroll & Misc. Taxes

Total Payroll & Misc. Taxes are from **Table 3, Pages 22 through 28, Line 31**.

Line 8, State Income Tax

The State Income Tax is from the State Income Tax Computation on **Table 5, Pages 8 through 14, Line 31**.

Line 9, Federal Income Tax

The Federal Income Tax is from the Federal Income Tax Computation on **Table 5, Pages 22 through 28, Line 31**.

Line 11, Total Operating Expenses

Total Operating Expenses including State and Federal Income Taxes are the sum of **Line 4** through **Line 9**.

Line 13, Utility Operating Income

Total Utility Operating Income (Return) is Total Operating Revenues on **Line 1** less Total Operating Expenses on **Line 11**.

Line 15, Utility Rate Base

Total Utility Rate Base (Total Rate Base) is from **Table 2, Pages 57 through 63, Line 31.**

Line 17, Rate of Return (8.43%)

The Rate of Return on Utility Rate Base (System Rate of Return) shown on **Line 17** is calculated by dividing Utility Operating Income on **Line 13** by Utility Rate Base on **Line 15.**

Line 19, Index

The Index (Relative Rate of Return), **Line 19**, is the ratio of the class rates of return to the system rate of return percentage.

Line 21, Deviation

The Deviation is the extent (in percentage points) by which the actual rate of return for each customer class deviates from the total system rate of return.

Line 23 and 24, $\pm 10\%$ Tolerance Bands

A ± 10 tolerance band has been computed around the system rate of return and are shown on **Lines 23 and 24**, respectively.

Lines 26 and 27, Revenue Surplus and Deficiency

The Revenue Surplus or Deficiency for the returns that fall outside the tolerance band are shown on **Lines 26 and 27**, respectively.

VI - RATE BASE - Table 2

Total Rate Base shown on **Table 2, Pages 57 through 63**, is the sum of book costs related to **Plant in Service, Table 2, Pages 1 through 7**, (transmission and distribution plants), **General Plant/Common Plant, Table 2, Pages 8 through 14** and **Plant Held for Future Use, Table 2 Pages 15 through 21** less the corresponding **Accumulated Reserve for Depreciation, Table 2, Pages 22 through 28** plus **Non-Interest Bearing CWIP, Table 2, pages 29 through 35** resulting in **Net Plant, Table 2, pages 36 to 42** plus **Rate Base Adjustments, Table 2, pages 43 to 49** plus **Working Capital, Table 2, Pages 50 through 56.**

Plant in Service - Table 2, Pages 1 through 7:

The total book costs for electric plant in service shown on Table 2, Pages 1 through 7 are costs comprised of the transmission and distribution plant in service book costs from the Company's accounting data organized by PSC Account shown functionalized on the workpaper Total Book Cost Summary.

PSC Account 310 through PSC Account 348 - Production

The book costs for production plant is zero.

PSC Account 350 through PSC Account 359 – Transmission

These costs were functionalized direct to the transmission function.

PSC Account 360, Land and Land Rights

The cost is for land occupied by substations and distribution facilities and was functionalized to the Substation function.

PSC Account 361, Structures and Improvements

PSC Account 362, Station Equipment

The costs represent the substation structures and equipment plant. These costs were functionalized to the Substation function.

PSC Account 363, Storage Battery Equipment

The costs represent the battery storage equipment. These costs were functionalized to the Substation function.

PSC Account 364, Poles, Towers and Fixtures

The high-tension portion of these costs was divided into a high-tension demand and customer component using a minimum system methodology. The low-tension plant was further subdivided into demand and customer components using a minimum system methodology. The results of the minimum size method for PSC Account 365, (for both primary and secondary) Overhead Conductors were applied to this account.

PSC Account 365, Overhead Conductors

Quantities and costs of overhead cable assets consisting of high tension (primary) and low tension (secondary) cables were provided by Property Records tabulated as PSC Account 365, Overhead

Conductors. The total book cost of PSC Account 365, Overhead Conductors was then further subdivided into their respective demand and customer components using a minimum system methodology.

PSC Account 366, Underground Conduit

PSC Account 367, Underground Conductors

In an identical manner as explained above for overhead cable, quantities and costs of underground cable consisting of high tension (primary) and low tension (secondary) cable were provided by Property Records tabulated as PSC Account 367, Underground Conductors. The total book cost of PSC Account 367, Underground Conductors was then further subdivided into their respective demand and customer components using a minimum system methodology. The total book cost of PSC Account 366, Underground Conduit was then assigned to the high tension and low tension demand and customer component functions based on the allocations developed above for PSC Account 367, Underground Conductors.

PSC Account 368, Line Transformers

This represents the functionalized total book cost of the overhead and underground line transformers. These costs were further subdivided into demand and customer components using a minimum system methodology. The methodology employs the “Minimum Size” method to classify certain distribution plant accounts as either customer-related or demand-related. The minimum size for the Overhead and Underground Transformers is determined by calculating the weighted average unit cost using the embedded cost of installed transformers of up to and including 150kVa and 250 kVa respectively.

PSC Account 369, Services

The total book cost of services was directly assigned to the overhead and underground services functions based on the Company’s property records data.

PSC Account 370, Meters and Meter Installations

The total cost of meters and meter installations is functionalized to the Metering function.

PSC Account 371, Installations on Customers’ Premises

The total book cost for the installations on customer premises was assigned directly to the Installation on Customers' Premises function.

PSC Account 373, Street Lighting and Signal Systems

The total book cost for street lighting and signal systems was assigned directly to the Street Lighting function.

Total Distribution Plant

Total distribution plant is the sum of **PSC Accounts 360 through 373**.

General Plant/Common Plant - Table 2, Pages 8 through 14:

PSC Account 301 to PSC Account 303 – Intangible Plant

These costs were functionalized based on the book cost of common plant.

PSC Accounts 389 through 399 – General Plant

These costs were functionalized based on the book cost of common plant.

PSC Accounts 303.0-303.9, and Accounts 389 through 398 – Common Plant

PSC Account 303.0-303.9 represent the cost of common intangible plant allocated to the Electric Department (76.03% of total common intangible plant) and functionalized based on the intangible plant book cost. PSC Accounts 389 through 398, these costs represent the cost of common plant allocated to the Electric Department (70.75% of total common plant) and functionalized based on labor costs.

Plant Held for Future Use – Table 2, Pages 15 through 21

PSC Accounts 350, and 360 Land and Land Rights represent book cost of plant held for future use and are functionalized to Transmission and Substation functions respectively.

Accum. Prov. For Depreciation - Table 2, Pages 22 through 28

The **Accum. Prov. For Depreciation** shown by function on **Table 2, Pages 22 through 28** were functionalized based on the corresponding book cost of plant.

Non-Interest Bearing CWIP - Table 2, Pages 29 through 35

The year ended balance of Non-Interest Bearing CWIP (Construction Work in Progress) on which interest is not capitalized, is shown in total on **Line 31 of Table 2, Pages 29 through 35**. This amount was functionalized based on the book cost of plant shown on **Table 2, Pages 1 through 7**.

Net Plant - Table 2, Pages 36 through 42

Net Plant shown on **Table 2, Pages 36 through 42** by function by class is the sum of **Table 2, Pages 1 through 21, Book Cost of Plant (Plant in Service, General Plant/Common Plant and Plant Held for Future Use)**, less **Table 2, Pages 22 through 28, Accum. Prov. for Depreciation**, plus **Table 2, Pages 29 through 35, Non-Interest Bearing CWIP**.

Rate Base Adjustments - Table 2, Pages 43 through 49

The year ended balance of Rate Base Adjustments is shown on **Line 31 of Table 2, Pages 43 through 49**.

Working Capital - Table 2, Pages 50 through 56

Working Capital which appears on **Table 2, Pages 50 through 56** is composed of the cost of materials and supplies on hand, prepayments of operating taxes, insurance, etc., as well as a cash allowance for operation and maintenance expenses representing a lag of revenue collection over payments for costs incurred.

Total Rate Base - Table 2, Pages 57 through 63

Total Rate Base is the sum of **Net Plant, Pages 36 through 42, Rate Base Adjustments, Pages 43 through 49 and Working Capital, Pages 50 through 56**, shown on **Table 2, Pages 57 through 63**.

VII – OPERATING EXPENSES – Table 3

Total Operating Expenses, Table 3, Pages 29 through 35, represent the sum of expenses by function, by class, of **Operation & Maintenance Expenses Table 3, Pages 1 through 7**, and **Total Other Expenses** which is the sum of **Depreciation & Amortization Table 3, Pages 8 through 14, Property Taxes Table 3, Pages 15 through 21**, and **Payroll & Misc. Taxes Table 3, Pages 22 through 28**.

Operation & Maintenance Expenses - Table 3, Pages 1 through 7

The major types of operation and maintenance expenses are, Transmission, Distribution, Customer Accounting, Uncollectibles, and Customer Service, including Miscellaneous Revenue Credits and

Administrative and General Expenses developed and summarized by PSC accounts in the **Total Operating Expenses Summary** work paper described below:

Total Operating Expenses Summary:

PSC Accounts 500 through 557, Production Expenses

Production expenses are not reflected in this study.

PSC Accounts 560 through 572, Transmission Expenses

These costs represent transmission expenses, functionalized to the Transmission function.

PSC Account 575.7 Regional Marketing Expenses

This cost is part of transmission maintenance for monitoring and compliance duties, functionalized to the Transmission function.

PSC Account 580, Operation Supervision and Engineering

The Supervision and Engineering expense related to Operation was reallocated to PSC Accounts 581 through 588.

PSC Account 581, Load Dispatching

These costs are assigned directly to the Transmission function but were zero in this study.

PSC Account 582, Station Expenses

These costs were functionalized to the Substation function based on their related book cost.

PSC Account 583, Overhead Lines

These costs were functionalized based on the functionalization of the book costs of PSC Account 364 Poles, Towers and Fixtures and PSC Account 365, Overhead Conductors.

PSC Account 584, Underground Lines

These costs were functionalized based on the book costs of PSC Account 366 Underground Conduit, and PSC Account 367, Underground Conductors.

PSC Account 585, Street Lighting

These costs were zero for this account.

PSC Account 586, Meters

These costs were functionalized directly to Metering function.

PSC Account 587, Customer Installations Expenses

These costs were functionalized directly to the Installation on Customers' Premises function.

PSC Account 588, Miscellaneous Distribution Expenses

These costs were functionalized based on the book costs of the total distribution plant. A portion of this account was functionalized to the Merchant function.

PSC Account 589, Distribution Rents

These costs were functionalized based on book costs of total distribution plant.

Total Distribution Operation Expense

Total of PSC Accounts 580 through 589.

Total Distribution Operation Expense less Rent and S&E

Total Distribution Operation Expense less Rent and S&E is total Distribution Operation Expenses minus PSC Account 589, Distribution Rents, minus PSC Account 580, Operation Supervision & Engineering.

PSC Account 590, Maintenance Supervision and Engineering

The costs were zero for this account.

PSC Account 591, Structures

The costs were zero for this account.

PSC Account 592, Station Equipment

These costs were functionalized to the Substation function based on PSC Account 362, Station Equipment.

PSC Account 593, Overhead Lines

These costs were functionalized based on PSC Account 364 Poles, Towers and Fixtures and PSC Account 365 Overhead Conductors.

PSC Account 594, Underground Lines

The costs were functionalized based on PSC Account 366, Underground Conduit and PSC Account 367, Underground Conductors.

PSC Account 595, Line Transformers

The costs were functionalized based on book cost of PSC Account 368, Line Transformers and Devices.

PSC Account 596, Street Lighting

The costs were functionalized directly to the Street Lighting function.

PSC Account 597, Meters

The costs were zero for this account.

PSC Account 598, Miscellaneous Distribution Plant

The costs were zero for this account.

Total Distribution Maintenance Expenses

Total of PSC Accounts 590 through 598.

Total Distribution Maintenance Expenses less S&E

Total Distribution Maintenance Expense less S&E is Total Distribution Maintenance Expenses minus PSC Account 590, Maintenance Supervision and Engineering.

Total Distribution Expenses

The sum of Total Distribution Operation Expenses and Total Distribution Maintenance Expenses.

Total Distribution Expenses Excluding Rents and S&E

Total Distribution Expenses Excluding Rents and S&E is the sum of Total Distribution Operation Expense less Rents and S&E and Total Distribution Maintenance Expense Less S&E.

PSC Accounts 901 through 903, and 905, Customer Accounts Expense

The total customer accounts expenses of PSC Accounts 901, 902, 903, and 905, excluding portions allocated to the competitive functions, were functionalized directly to the Customer Accounting function.

PSC Account 904, Uncollectibles

PSC Account 904, Uncollectible expenses, excluding commodity related uncollectibles and portions allocated to the competitive functions, were functionalized directly to the Uncollectibles function.

PSC Accounts 907 through 916, Customer Service & Sales Expense

Customer Service expenses, excluding costs related to educational customer advertising that were allocated to the competitive functions and costs associated with SBC, were functionalized directly to the Customer Service function.

Total Operation and Maintenance Expenses

Total Operation and Maintenance Expenses is the sum of Production, Transmission, Market Facilitation, Monitoring and Compliance Service, Distribution, Customer Accounts, and Customer Service & Sales Expenses.

PSC Accounts 920 through 935, Administrative and General Expenses

Administrative and General Expenses consist of PSC Accounts 920 through 935. Labor was used as the basis of functionalization for PSC Accounts 920, 921, 922, 923, 926, 929, 930.2, 931, and 935. PSC Accounts 924, 925 and 928 were functionalized based on transmission and distribution operation and maintenance expenses excluding rents.

Adjusted Total O&M

The Adjusted Total O&M equals the sum of Total Operation and Maintenance and Administrative Expenses and General Expenses.

Total Adjusted Miscellaneous Revenue Credits

The functionalized Miscellaneous Revenue Credits represent the adjusted sum of PSC Accounts 447, 449, 451, 454 and 456.

Total O&M

Total Adjusted O&M is the sum of Adjusted Total O & M and Total Adjusted Miscellaneous Revenue Credits.

Depreciation & Amortization - Table 3, Pages 8 through 14

Depreciation & Amortization Expenses were identified with each plant PSC Account or group of accounts and functionalized in proportion to the corresponding depreciation reserve costs.

Property Taxes - Table 3, Pages 15 through 21

Property Taxes were functionalized based on total book cost of plant, excluding metering, and including common plant.

Payroll & Misc. Taxes – Table 3, Pages 22 through 28

Payroll & Miscellaneous Taxes were functionalized based on labor.

Total Other Expenses

The Total Other Expenses is the sum of Depreciation & Amortization, Property Taxes, and Payroll & Miscellaneous Taxes.

Total Operating Expenses - Table 3, Pages 29 through 35

The **Total Operating Expenses** is the sum of Total O&M and Total Other Expenses.

VIII - OPERATING REVENUES – Table 4

Operating Revenues are tabulated on **Table 4, Pages 1 through 7**. The **Total Operating Revenues** are shown on **Line 7** calculated by the sum of **Line 1** through **Line 5** as shown below:

Line 1, Revenue from Sales

Revenues from Sales are the annual T&D revenues.

Line 2, Other Electric Revenues

Other Electric Revenues are comprised of miscellaneous revenue items allocated to the revenue function.

Line 3, Competitive MFC Revenues

Revenues associated with the Merchant Function Charge, excluding commodity uncollectibles.

Line 4, Competitive Metering Revenues

Annual competitive metering revenues.

Line 5, BPP Revenues

Annual competitive billing and payment processing revenues from customers.

Line 7, Total Operating Revenues

Total Operating Revenues are the sum of **Line 1 through Line 5**.

IX – STATE AND FEDERAL INCOME TAXES – Table 5

State Income Taxes are shown on **Table 5, Pages 1 through 14. State Income Tax Computation** shown on **Table 5, Pages 8 through 14** was calculated at 7.25% of taxable income plus **SIT Adjustments, Table 5, Pages 1 through 7**. Federal Income Taxes are shown on **Table 5, Pages 15 through 28**. The **Federal Income Tax Computation** shown on **Table 5, Pages 22 through 28** was calculated at 21% of taxable income (less SIT) plus **FIT Adjustments, Table 5, Pages 15 through 21**. In the **SIT Adjustments** and **FIT Adjustments** workpapers, each individual deduction/addition tax adjustment line item is multiplied by 7.25% for SIT and 21% for FIT and is then functionalized based on cost causation. SIT and FIT amounts by function are not the final amounts because they do not include the revenue functional amounts since they are not determined until subsequent calculations. Results are presented on a functional basis to maintain a consistent report format. The total state income tax by class is shown on **Line 31 of Table 5, Pages 8 through 14** and the total federal income tax by class is shown on **Line 31 of Table 5, Pages 22 through 28**.

X – CUSTOMER COST BY CLASS - Table 6

These are electric system costs considered to be customer related and are shown, by class, on **Table 6, Pages 1 through 7**.

Line 1, Number of Customers

The number of customers in each class from the allocation factor **K01**.

Line 3, Rate Base

The customer related rate base shown for each class from **Table 2, Pages 57 through 63, Line 28**.

Line 5, Total Customer Operating Exps.

The customer related operating expenses shown from **Table 3, Pages 29 through 35, Line 28**.

Line 6, Monthly Customer Operating Expenses Cost/Customer

The monthly amount for operating expenses per customer shown on **Line 6** is calculated starting with **Line 5** divided by **Line 1**, then the results are divided by 12.

Line 8, Return @ 8.43% (Customer)

The applied rate of return on rate base of **8.43%** is the Total System Rate of Return developed in this study, shown on **Table 1, Page 1, Column 1, Line 17**.

Line 9, S.I.T. & F.I.T. Percent on Return

The S.I.T. & F.I.T. Percent on Return, **Line 9** developed by dividing the sum of the Total Company State and Federal Income Taxes as shown on **Table 1, Page 1, Column 1, Line 8** and **Line 9**, respectively, by the Total System Utility Operating Income (return) shown on **Table 1, Column 1, Line 13**.

Line 10, Income Tax On Return

The Return of **Line 8** multiplied by the S.I.T. & F.I.T. Percent on Return **Line 9**, results in the Income Taxes on Return on a class-by-class basis.

Line 11, Total Return & S.I.T. & F.I.T.

The Total Return & F.I.T. (including S.I.T.) shown on **Line 11** is the sum of **Line 8**, Return and **Line 10**, Income Tax on Return.

Line 12, Monthly Ret. S.I.T. & FIT Cost/Cust.

The monthly amount for Return and Income Taxes per customer is calculated starting with **Line 11** divided by **Line 1**, then the results are divided by 12.

Line 14, Monthly Customer Costs

The Monthly Customer Costs are the sum of **Line 6** and **Line 12**.

*Non-Competitive Revenue is the current level revenue calculated in the rate design model which the revenue is based on the 2022 historical year billing determinants priced out with CY2024 rates.

**Competitive Revenue is based on the historical year data priced out with the current rates with the summer and winter allocation from the historical year billing determinants for the BPP. MFC is the RY3 target in Case 21-E-0074 for Supply-Related, C&C-Related, and POR.

The following discussion applies to all transmission plant FERC accounts 350 through 359 and associated transmission O&M expenses FERC Accounts 560 through 573:

A majority of the Company's customers are connected to the electrical system at voltages below the transmission level. Therefore, for these customers ACOS study evaluates transmission costs based on the decision tree framework applicable to higher than interconnection voltage level.

DT Q1: Yes

Transmission plant and O&M costs contained in these FERC Accounts are linked to Company's transmission assets.

DT Q2: Yes

Transmission costs are classified as entirely demand related in the Company's ECOS study.

The following discussion applies to all transmission plant FERC accounts 350 through 359 and associated transmission O&M expenses FERC Accounts 560 through 573:

Certain SC 9 and SC 22 customers are connected to the Company's electrical system at the transmission voltage level. Therefore, for these customers ACOS study evaluates transmission costs based on the decision tree framework applicable to their interconnection voltage level.

DT Q1: Yes

Transmission plant and O&M costs contained in these FERC Accounts are linked to Company's transmission assets.

DT Q2: Yes

Transmission costs are classified as entirely demand related in the Company's ECOS study.

DT Q3: No

A decrease in demand would not result in entirely unused assets as this equipment serves all customers.

DT Q4: Yes

An increase in the system coincident demand would in all likelihood lead to an increase in transmission costs.

DT Q5: Yes

At the transmission customers' interconnection voltage level, an increase in non-coincident peak demand may lead to an increase in transmission costs.

DT Q6: Yes

Buyback customers should bear appropriate cost responsibility for using the Company's system related to their injections. To the extent a kW of reverse power flow requires the use of the Company's grid, the buyback customer should contribute to its costs.

Decision Tree Mapping							
Higher Than Interconnection Voltage							
Question 1: Is the cost linked to a type of asset?	Question 2: Are all the costs attributable to customer demand?	Question 7: Does the cost apply to all cost categories?	Question 9: Is the cost a tax-related to either a specific asset or cost which varies with customer demand? The following discussion applies to distribution plant FERC accounts 360 through 363 and associated distribution O&M expenses FERC Accounts 582, 588, 589 and 592:
Either entirely or partially these FERC Accounts constitute substation costs.

A majority of the Company's customers are connected to the electrical system at voltages below the substation level. Therefore, for these customers ACOS study evaluates these FERC Accounts based on the decision tree framework applicable to higher than interconnection voltage level.

DT Q1: Yes

Plant and O&M costs contained in these FERC Accounts are linked to Company's substation assets.

DT Q2: Yes

Substation costs are classified as entirely demand related in the Company's ECOS study.

The following discussion applies to distribution plant FERC accounts 360 through 363 and associated distribution O&M expenses FERC Accounts 582, 588, 589 and 592:
Either entirely or partially these FERC Accounts constitute substation costs.

Certain SC 9 and SC 22 customers are connected to the Company's electrical system at the substation voltage level. Therefore, for these customers ACOS study evaluates these costs based on the decision tree framework applicable to their interconnection voltage level.

DT Q1: Yes

Plant and O&M costs contained in these FERC Accounts are linked to Company's substation assets.

DT Q2: Yes

Substation costs are classified as entirely demand related in the Company's ECOS study.

DT Q3: No

A decrease in demand would not result in entirely unused assets as this equipment serves customers at this interconnection voltage level, as well as primary and secondary connected customers.

DT Q4: Yes

The Company believes the appropriate answer to Question 4 is no. For the reasons discussed in the Company's July 14, 2022 filing and solely for the purposes of this filing, the Company has answered yes to Question 4. The Company reserves the right to change this determination in future standby rate filings if other aspects of the decision tree or ACOS process are changed.

DT Q5: Yes

At the substation customers' interconnection voltage level, an increase in non-coincident peak demand may lead to an increase in these costs. The Company believes that non-coincident peak demands are an important driver of substation costs at the customers' interconnection voltage levels. This is evident in the way substation costs are allocated to service classes in the Company's ECOS study, where class non-coincident demands are incorporated into the allocator.

DT Q6: Yes

Buyback customers should bear appropriate cost responsibility for using the Company's system related to their injections. To the extent a kW of reverse power flow requires the use of the Company's grid, the buyback customer should contribute to its costs.

The following discussion applies to customer-related portions of distribution plant FERC accounts 364 through 368, entire FERC accounts 369, 370, 371 and associated portions of distribution O&M expenses FERC Accounts 583, 584, 588, 589, 593, 594, 595 and entire distribution FERC accounts 586, 587 and 597:

DT Q1: Yes

Plant and O&M costs contained in these FERC Accounts are linked to Company's distribution and customer-related assets.

DT Q2: No

Customer-related distribution costs are not attributable to customer demand in the Company's ECOS study.

DT Q7: No

Customer-related distribution costs do not apply to all cost categories. They are attributable to specific customer-related distribution functions in the Company's ECOS study.

In addition, FERC accounts related to Customer Accounts Expense, Customer Service and Informational Expenses, Sales Expenses, and Administrative and General Expenses are classified as customer-related for the following reasons:

DT Q1: No

These FERC Accounts are not linked to Company's assets.

DT Q7: No

Customer-related expenses do not apply to all cost categories in the Company's ECOS study.

Note 1:

The answer to Question 8 is evaluated in aggregate. To the extent total ACOS customer costs are higher than the otherwise applicable non-standby customer charges, resulting spillover (difference between ACOS customer costs and otherwise applicable customer charges) is classified as local and excluded from Buyback rates.

The Commission's 2022 Standby Order has determined that general costs linked to both assets and customer demands should be functionalized to the various voltage levels and usage areas using the same method employed in ECOS studies. Once functionalized, these general costs are treated as adders to the associated asset costs within each function and thus be allocated to the shared, local and customer categories in the same manner as those assets.
